## MAP OF NEW ARRIVALS PER CAUSE OF DISPLACEMENT

## ORIGINS AND DESTINATIONS OF NEW ARRIVALS<sup>1</sup>

<sup>1</sup> Totals may not equal 100% due to rounding calculation.

### MAIN IDP NEEDS IN ASSESSED LOCATIONS (% OF SETTLEMENTS)

### REPORTED NEEDS AND RESPONSE FOR NEW ARRIVALS

The needs of the majority of IDPs in a location refer to the total IDP population who may have arrived at any time, while new arrival needs refer to IDP flows who arrived in a specified period of time (e.g. week 04). Concerning the former, most IDPs needed food (63%), while others needed drinking water (19%), shelter (6%) and livelihoods (5%).

With regard to new arrivals from 05 to 08 July, the main reported needs were shelter and food (96% each), NFIs and health (91% each), nutrition (90%) and water services (80%). Response levels during the assessed days were very low compared to reported needs, with assistance reported for sanitation (5%), health (2%) and nutrition services (1%).

### METHODOLOGY AND CONTEXT

This round of Emergency Trend Tracking (ETT) was initiated in June 2026 to monitor displacement due to conflict, as well as the climatic impacts of the Super El Niño phenomenon, which is expected to cause significant displacement toward the end of the year.

DTM teams collect data in five districts: Baidoa, Dayniile, Diinsoor, Doolow, and Kahda.

ETT is a crisis-based tool that tracks sudden displacement triggered by specific events or emerging crises. Its objective is to support the prioritization of humanitarian response and enable partners to deliver rapid assistance. Based on previous shock-induced displacement patterns, the humanitarian community expects continued movement toward urban areas in search of services. Consequently, ETT coverage focuses on main urban centers and surrounding villages within each assessed district.

Data is collected through phone calls with a network of key informants (KIs) across all locations recorded in the DTM masterlist, developed over several years of in-person data collection. Data collection takes place weekly, from Sunday to Wednesday. It includes information on new arrivals, the number and demographics of IDPs, reasons for displacement, intentions, humanitarian assistance received, and priority needs, among others.

### LIMITATIONS

The data is collected through Key Informant Interviews (KIs) and remotely since June 2026, consequently the findings should be considered as estimates. Most indicators are also captured for the “majority of the people displaced within a location/because of a specific factor”. For example, the place of origin assessed for the new arrivals in one location, is the place of origin of the majority of these new arrivals. The detailed information on all places of origin is not collected and reported. For the reasons for displacement, although the ETT breaks down the new arrivals per main cause, IDPs may be displaced because of a combination of factors. The exercise covers the main urban centers and surrounding areas in each district, consequently none of the districts have a full coverage. The GPS coordinates collected can be approximations and are not always exact locations.

### DEFINITIONS

**New arrivals:** number of individuals who arrive in the settlement a given week. This number doesn't represent new IDPs as new arrivals may be primary but also secondary displacements.

**Urban settlements:** neighborhoods located in the main administrative town of each district.

**Rural settlements:** villages outside of cities and towns.

**IDP sites:** camp and camp-like settings hosting IDPs.

### DISCLAIMER

The maps in this dashboard are for illustrative purposes only. Representations and the use of boundaries and geographical names on these maps may include errors and do not imply judgment of the legal status of a territory, nor official recognition or acceptance of these boundaries by IOM.
