SITUATION OVERVIEW

In mid-December, severe and prolonged flooding affected large parts of southern and central Mozambique. Rivers burst their banks, displacing communities and damaging or destroying homes, health facilities, water systems and other critical infrastructure.

The National Institute for Disaster Management and Risk Reduction reports that more than 724,000 people have been affected by floods. At the peak of the emergency, over 100,000 people were hosted in approximately 100 accommodation centres.

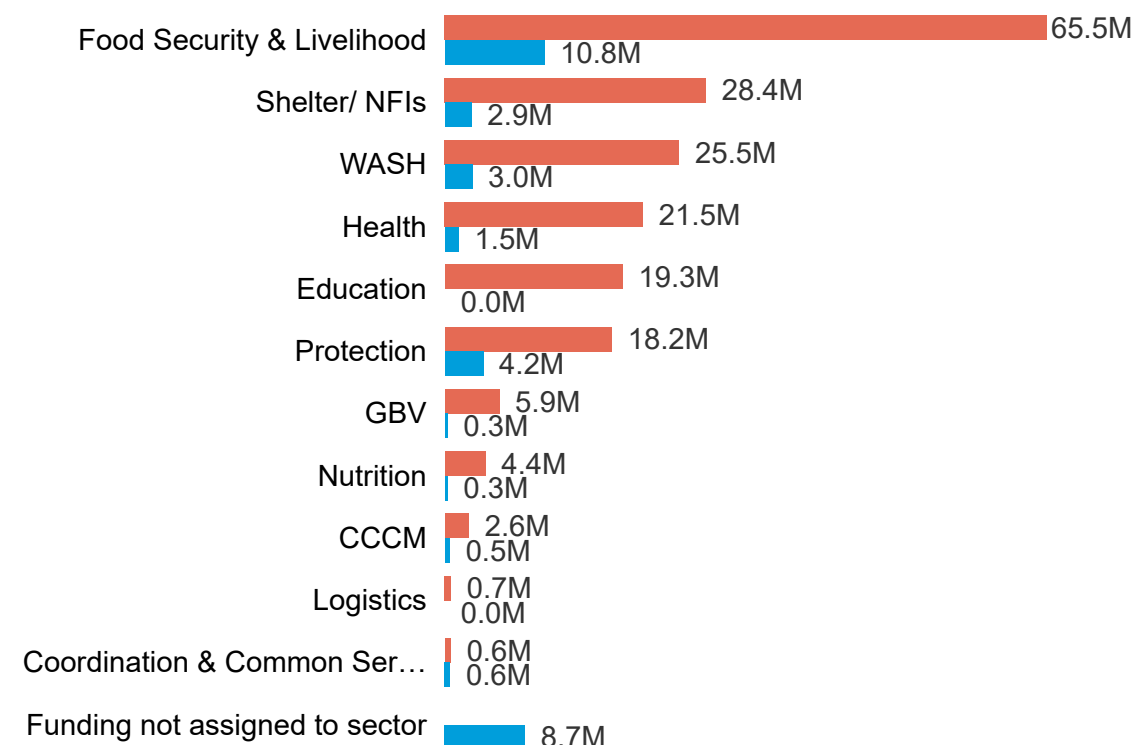

Since the onset of the emergency, the United Nations and humanitarian partners have worked closely with national and local authorities to reinforce national systems, strengthen coordination mechanisms and support the delivery of life-saving assistance.

The 2026 HNRP Flood Addendum seeks US\$187 million to provide urgent, life-saving assistance to approximately 600,000 people affected by the floods.

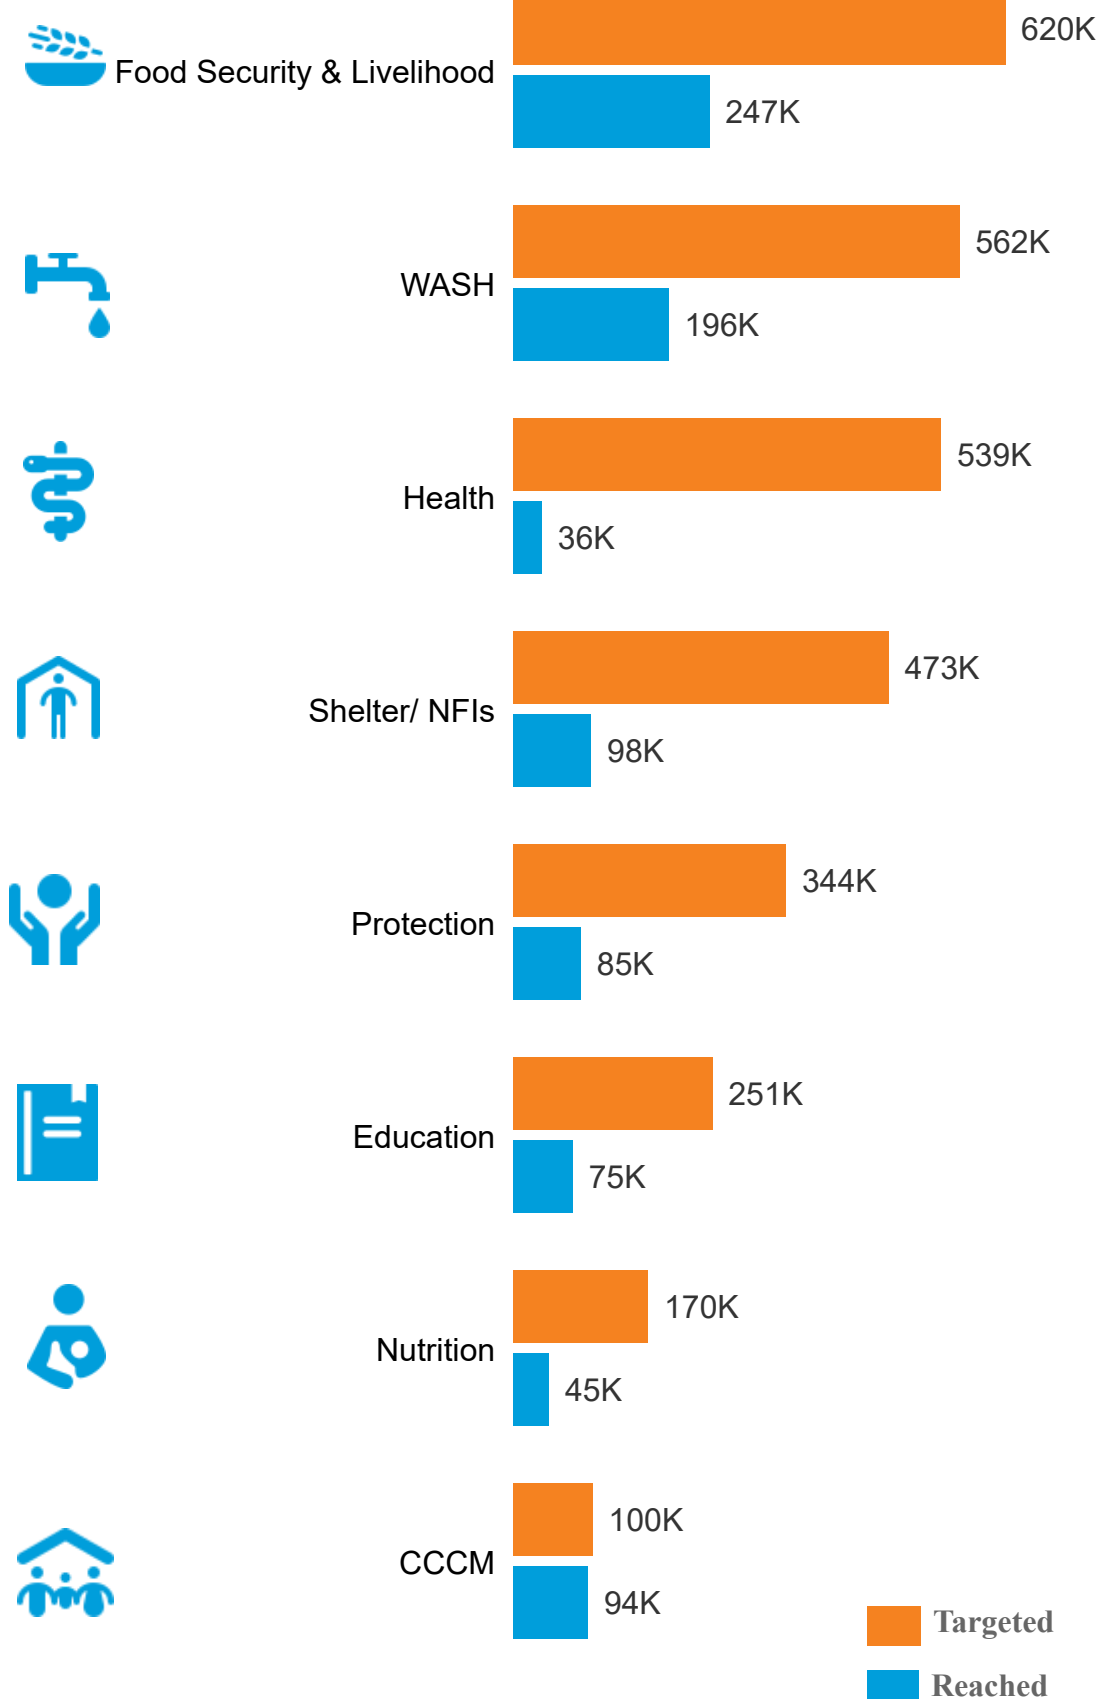

Progress against agreed cluster targets is tracked through the Flood Humanitarian Response Dashboard, which is compiled by OCHA based on inputs from humanitarian partners and clusters. As of 30 April, more than 355,000 people have received some form of assistance, mostly by the Food Security and Livelihoods (FSL), Shelter and Water, Sanitation and Hygiene (WASH) clusters.
