Introduction

Purpose

This report provides a comprehensive overview of the current humanitarian situation, focusing on both operational environment factors and sectoral analysis. It aims to support informed decision-making for humanitarian partners and stakeholders.

About GANNET

GANNET is a Generative AI Initiative from Data Friendly Space, offering AI-powered tools built to make knowledge and real-time information accessible to our community in a resource-efficient and ethical way. It provides tools such as the GANNET Virtual Assistant and GANNET SituationHub to help humanitarian actors access, analyze, and utilize critical information for their operations.

GANNET SituationHub

The GANNET SituationHub is a generative AI-powered digital public good designed to identify and analyze humanitarian data from thousands of trusted sources in real time. By transforming complex data into clear insights, it enables faster, more effective response strategies and improved coordination among stakeholders.

GANNET Virtual Assistant

The GANNET Virtual Assistant is a verified chatbot designed for humanitarian quick decision-making. Built on cutting-edge Generative AI and trained with humanitarian expert-reviewed data, it provides real-time information. The GANNET Virtual Assistant facilitates rapid data access and synthesis for crisis response.

Methodology Overview

The Situation Hub's analytical process uses a structured Human-in-the-Loop workflow that combines automated analysis retrieval through GANNET Virtual Assistant, DFS's AI-powered humanitarian assistant, with expert review by the DFS analysis team. GANNET automates the extraction and generation of crisis-related insights based on structured prompts, which are aligned with a tailored analytical framework. These outputs are then reviewed, validated, and refined by analysts to ensure accuracy, contextual relevance, and operational utility. The workflow is organized into four key phases: planning and setup, ongoing operations, quality assurance, and system evolution, ensuring a balance between speed and analytical rigor.

Planning, Setup & Quality Control

In the planning phase, analysts develop a contextualized analytical framework, largely based on the Joint Intersectoral Analysis Framework (JIAF), and convert it into structured prompts for AI-assisted data extraction. These prompts are refined over time to improve output quality. Data sources are vetted for reliability, and translations are reviewed for accuracy. Using a centralized Content Management System (CMS), analysts review and curate AI-generated outputs, validate them against external sources, and make refinements to enhance clarity and relevance. The CMS enables collaborative editing and version tracking, ensuring outputs align with humanitarian needs.

Bias Mitigation

To minimize bias, the team diversifies data sources, cross-verifies information, and continuously evaluates the AI's performance. Analysts are crucial in identifying and correcting inaccuracies, especially in automated categorization. Future improvements aim to enhance source credibility checks and sentiment analysis, further strengthening the reliability of the Situation Hub's outputs.

Crisis Overview

The SituationHub landing pages use a standardized yet customizable template to deliver consistent, comprehensive crisis overviews. These pages integrate static content with dynamic data from sources like ACLED and DTM via open APIs, enabling interactive visuals with real-time updates. Regular reviews and verification with in-country partners ensure accuracy, while manual updates are used for sources not connected to APIs.

Media Monitoring

The media monitoring process has evolved from a manual, list-based approach to an AI-assisted system integrated into the CMS. This allows analysts to efficiently review, filter, and contextualize media narratives, while automation helps track emerging trends.

Overview

The following overview has been generated using the information available up to July 13, 2026. It provides a synthesized summary and key insights into the crisis based on the most recent data accessible at that time.

Summary

Myanmar has been in crisis since 1 February 2021, when the military (Tatmadaw) overthrew the democratically elected government. This coup sparked widespread protests and armed resistance, leading to a severe political, economic, and humanitarian crisis. The military regime, known as the State Administration Council (SAC), has responded with brutal force, resulting in thousands of civilian deaths and widespread human rights abuses. As of March 2026, approximately 3.7 million people are internally displaced across the country – a dramatic increase from roughly 300,000 pre-2021 – with overall displacement figures – including those who fled to neighbouring countries – crossing 5.3 million.

In attempt to seek international legitimacy, the military held general elections in three phases over December 2025 and January 2026 for the first time since the coup. The overwhelming majority of seats were won by the pro-military Union Solidarity and Development Party (USDP) and saw SAC chairman Min Aung Hlaing elected as president in April 2026. The elections have been widely denounced as neither free nor fair. Despite the transition to a quasi-civilian presidency, armed clashes have continued in multiple parts of the country, including Sagaing, Magway, northern Shan, Kayah, Kayin, Kachin, Chin, and Rakhine. The Arakan Army (AA) now controls all but three of Rakhine State's 17 townships, while resistance forces including the Karen National Liberation Army (KNLA) have consolidated influence across parts of central and southeastern Myanmar. The UN's 2026 Humanitarian Needs and Response Plan (HNRP), released 10 December 2025, projects over 16 million people will require humanitarian assistance this year.

Recovery from the March 2025 earthquake remains slow, with an estimated 3.5 million tonnes of debris and reconstruction hampered by insecurity, shortages of heavy machinery and labour, and limited access. Many affected communities, particularly in Magway, Sagaing, and Mandalay, continue to live in temporary shelters, while essential services remain disrupted. Approximately 24,200 houses were damaged (24% completely destroyed), and 132 health facilities were damaged – half in Mandalay.

The Rohingya crisis continues to worsen, with the junta's blockade of Rakhine preventing international aid delivery since late 2023, leaving hundreds of thousands of IDPs with severely limited assistance. On 10 December 2025, a military airstrike destroyed Mrauk-U General Hospital, killing at least 33 people and injuring 76–80 – one of the deadliest attacks on healthcare in the conflict. Chronic poverty now affects over 80% of the population; the World Bank projects GDP will contract 2.0% in FY2025/26 with inflation remaining above 20%, and market disruptions have deepened food insecurity nationwide. The 2026 HNRP appeals for approximately USD 890 million but reflects severely constrained funding and narrowed operational space, forcing agencies to prioritise only 2.6 million people with the most severe needs for life-saving support.

Key Insights

1. Myanmar's humanitarian crisis continues to deepen amid persistent conflict, economic collapse, and the lingering impacts of the March 2025 earthquake. An estimated 16 million people – nearly one in three citizens – are projected to require humanitarian assistance in 2026, as conflict-driven displacement, natural disasters, funding shortages, and humanitarian access constraints exacerbate vulnerabilities nationwide.

The 28 March 2025 earthquake remains a defining event in the humanitarian landscape. Official figures from SAC confirm 3,770 deaths and over 5,000 injuries, with the Early Recovery Cluster reporting over 24,200 houses damaged (24% completely destroyed), 4,857 apartments affected, and 132 health facilities damaged. An estimated 3.5 million tonnes of debris blocks roads and markets, with clearance impeded by shortages of heavy machinery and labour. Nearly three-quarters of the most affected townships continue to face critical shelter and livelihood gaps – 64% of communities reported job losses and 30–31% reported damage to crops and workplaces – while disrupted water systems (44% of groundwater sources contaminated) have fuelled outbreaks of cholera and dengue.

2. Following the junta-run general elections held over December 2025 and January 2026, as well as ceasefires between the regime and some ethnic armed organisations in northern Shan, the number of armed conflict incidents has gradually decreased through early 2026. Nonetheless, air and ground offensives continue in the Central Dry Zone, as well as Rakhine, Chin, Kayah, Kayin, and Kachin States. The new government's 100-day roadmap announced on 21 April 2026, which invites resistance groups to enter peace talks and to surrender, have not been widely accepted.

Between January and November 2025, the military conducted 2,165 airstrikes, up from 1,716 in all of 2024. On 10 December 2025, a military airstrike destroyed Mrauk-U General Hospital in Rakhine State, killing at least 33 people and injuring 76–80, prompting UN, WHO, and Amnesty International condemnation and calls for investigation as a possible war crime.

IDPs have reached approximately 3.7 million people as of March 2026, with projections indicating it could rise further through 2026. The AA now controls all but three of Rakhine's 17 townships, while resistance forces have captured extensive border areas in the southeast. Attacks on healthcare are widespread: Insecurity Insight recorded 1,815 attacks on healthcare between February 2021 and November 2025, with WHO verifying 67 attacks in 2025 alone. Access restrictions, including the junta's blockade of Rakhine since late 2023, continue to endanger civilians – particularly Rohingya communities facing persistent protection risks, restricted mobility, and limited access to aid.

3. Humanitarian access remains severely limited by insecurity and deliberate obstruction. The 2026 HNRP appeals for approximately USD 890 million but reflects severely constrained funding and narrowed operational space, prioritising only 2.6 million people with the most severe needs at a cost of USD 521 million. Partners reached some 6.3 million people at the end of 2025, but access constraints –

including roadblocks, landmines, telecommunications blackouts, and the Rakhine blockade affecting 600,000 IDPs — force reliance on low-profile, community-led delivery modalities. WFP warns that hunger has reached "unacceptable" levels, with over 400,000 young children and mothers surviving on nutrient-deprived diets of plain rice or watery porridge.

4. The Food Security Cluster estimates about 12 million people face moderate-to-severe food insecurity in 2026, driven by conflict, displacement, rising food and fuel prices, reduced market access, and supply chain disruptions. September 2025 analyses reported "Serious" to "Critical" Global Acute Malnutrition in multiple conflict-affected townships, notably in northern Rakhine, Kachin, Sagaing, southern Shan, and Kayah — with nutrition and treatment services suspended or operating at minimal capacity due to access constraints.

Economic conditions continue to deteriorate: the World Bank projects real GDP will contract 2.0% in FY2025/26, with inflation remaining above 20%. Rising poverty and fear of forced conscription have driven male migration, leaving women, girls, and older people as household heads. More than four in 10 households identify lack of income as their top challenge, and 83% of internally displaced families can meet half or less of their basic needs. The convergence of conflict, disaster, and economic decline continues to erode coping capacities, pushing Myanmar further toward a protracted humanitarian emergency with no signs of de-escalation.

5. International condemnation has intensified following the 10 December 2025 airstrike on Mrauk-U Hospital. The UN High Commissioner for Human Rights called for an investigation, warning the attack could amount to a war crime. WHO's Director-General condemned the strike as among dozens of verified attacks on healthcare in 2025. Amnesty International and the Burma Human Rights Network have urged the UN Security Council to refer Myanmar to the International Criminal Court, impose an arms embargo, and authorise emergency cross-border humanitarian aid.

Peace negotiations remain effectively stalled: resistance leaders and the National Unity Government (NUG) publicly rejected Chinese-brokered terms for northern Shan State. The junta cancelled voting in over 67 townships where it cannot secure control, while nationwide "silent strikes" signalled popular rejection of the military's December 2025 elections. EU and Australia have declared the vote "not credible" amid junta repression. The junta denied responsibility for civilian casualties, accusing "terrorists" of being targeted, while humanitarian organisations stated that the pre-election environment has driven further escalation rather than de-escalation.

6. After taking office on 10 April 2026, president Min Aung Hlaing announced a 100-day program inviting resistance groups — both NCA signatories and non-signatories, including People's Defence Force (PDF) units — to enter peace talks by 31 July 2026. However, the Karen National Union (KNU), All Burma Students' Democratic Front (ABSDF), and the Chin National Front (CNF) quickly rejected the offer, with the KNU stating it has no intention of negotiating under frameworks linked to military rule, underscoring the deep erosion of trust between the junta and resistance forces.

Economy

Current Economic Situation

The World Bank estimated earthquake damage at about USD 11 billion (around 14% of GDP) and projected a contraction in FY2025/26 with only a moderate rebound in FY2026/27 driven mainly by reconstruction spending [2]. Myanmar entered a severe fuel crisis in March 2026, with gasoline roughly doubling and diesel nearly tripling, driving inflation to 24.6% in April 2026 and sharply raising operating costs across the economy [4]. Fuel and urea fertilizer prices remained well above year-earlier levels—the urea reference price fell from 157,000 MMK to 140,000 MMK in June 2026 but remained far above the prior season's 94,000 MMK—eroding fertilizer profitability and prompting some farmers to reduce cultivated area or ploughings, which risks lower monsoon-season agricultural output [1][3]. National rice prices were broadly stable in May 2026 (+2.2% year-on-year; +1.6% month-on-month) but showed pronounced regional disparities, while maize prices rose on strong export demand ahead of Thailand's June duty-free window and following Ayeyarwady Region announcements of direct maize exports to Thailand via Ranong Port [1][3]. Reopening of the Myawaddy–Mae Sot Friendship Bridge No.2 and the Mandalay–Myitkyina trade route is expected to improve formal agricultural and domestic trade connectivity, but border trade recovery more broadly remains slow amid security concerns and continued difficulties restoring crossings [1][8]. Depreciation in the parallel-market kyat sustained upward pressure on import and transport costs, further weighing on prices [46]. Development assistance for long-term projects has been suspended by some donors since the 2021 coup and was publicly queried by the junta on 30 June 2026 when it urged resumption of development aid, underscoring ongoing policy and financing constraints [15][7]. Large-scale illicit drug seizures and destructions—officials burned seized narcotics valued at nearly US\$600 million on 26 June 2026—remain an economic factor in parts of the country [35].

Conflict Economic Landscape

Persistent conflict and displacement are severely straining economic recovery and service delivery. UN agencies reported an estimated 3.8 million internally displaced people (IDP) and overall 5.4 million forcibly displaced within or from Myanmar as of end-May 2026, increasing pressure on markets, labour pools, and host-community services [7][20]. By late 2025, roughly 45% of affected firms had returned to pre-earthquake activity levels while only about half of affected households had begun repairs, even as major transport corridors and market supply chains gradually resumed operation [2]. Recovery remains deeply uneven: elevated fuel and fertilizer costs, trade disruptions, widespread displacement, and constrained humanitarian financing are undermining business recovery, job creation, and household livelihoods—particularly for women and small traders who report rising transport and capital costs and job losses [2][4]. Global attention and funding have been diverted by other crises, further stressing response and reconstruction finance, while calls by the junta for resumption of development aid have met international scrutiny given rights concerns [7][15]. Local fuel prices spiked in some areas—motorcycle petrol reached 15,000–20,000 MMK per litre in parts of Waw Ray Township in March 2026—contributing to higher consumer prices and transport costs [16]. About 15% of households near the March 2025 earthquake epicentre reported loss of income or employment, reflecting the compounding impact of disaster and conflict on livelihoods [2].

Stability of Currency and Bank System

The official exchange rate remained unchanged at 2,100 MMK/USD in May 2026 and has held at that level for three years, according to the Central Bank of Myanmar [1]. The parallel (online) trading rate rose 1.2% year-on-year in May 2026, and exporters must convert 15% of export earnings at the official rate and 85% at the online rate, creating a two-tier FX regime that affects export revenues [1]. Depreciation in the parallel-market MMK has sustained upward pressure on import and transport costs, further eroding purchasing power and input affordability [46]. Myanmar imports over 90% of its fuel and holds no domestic refining capacity, making the economy highly vulnerable to fuel price shocks: by end-May 2026, diesel was approximately 73% higher and petrol 83% higher than pre-crisis levels, with diesel rising 108% and petrol 66% year-on-year, contributing to fuel scarcity and elevated transport costs across the country [1][4]. These fuel and currency pressures compound fiscal and financial-system vulnerabilities already strained by earthquake damage estimated at approximately USD 11 billion (~14% of GDP) and the projected economic contraction in FY2025/26 [4][2].

Employment

Myanmar's ongoing conflict- and disaster-related shocks, compounded by the March–June 2026 fuel crisis, have materially reduced employment and livelihoods, with transport and fuel cost rises eroding market access and agricultural profitability [4][1]. Key indicators include:

- 56% of surveyed women-led and civil society organizations (CSOs) reported women are losing jobs or being forced to quit because of rising travel costs [4].
- Large-scale displacement is linked to livelihood losses: UNHCR reported 5.4 million people forcibly displaced and an estimated 3.8 million IDPs as of end-May 2026, increasing pressure on local labour markets and informal income sources [20].
- Fuel price shocks—diesel approximately 73% higher and petrol approximately 83% higher compared to pre-crisis levels by May 2026 (diesel +108% year-on-year)—have undermined fertilizer affordability and prompted some farmers to reduce cultivated area [1][3].
- Localised evidence of worsening household livelihoods includes reports of sharp falls in prices received for local products, reducing household profits and purchasing power [11].

- Roughly 80 Myanmar migrant workers were detained in China in June 2026 after resigning over unpaid overtime and poor conditions, indicating cross-border employment vulnerabilities for Myanmar workers [29].

Large displacement, access constraints, and administrative barriers are constraining labour recovery and forcing some local partners to scale back or cease activities, further limiting employment opportunities and market functionality [20][12]. Local civil society and frontline staff report relocation, heightened security risks, and operational disruptions that undermine both livelihoods and local service delivery [49].

Politics

Governance Structures and Rule of Law

Since the 2021 coup, the military has consolidated power through tightly restricted elections and Min Aung Hlaing's move from army chief to president, measures described as efforts to rebrand military rule [104][98][84]. Aung San Suu Kyi was transferred to a designated residence in late April 2026 and the junta denied ASEAN's special envoy access, citing her ongoing sentences and stating that meetings would only be permitted afterwards [104][98]. ASEAN has kept Myanmar effectively barred from high-level summits under the FivePoint Consensus (5PC), while member states remain divided between calls for conditional engagement and continued isolation [84][98]. The junta's denial of access to detained political leaders and diminished international oversight hinder prospects for legal remedies and meaningful rule-of-law engagement [104][98][84]. Territorial control is fragmented, with ethnic armed organizations (EAOs) and resistance forces administering services and authority in large areas, complicating accountability, humanitarian access, and engagement with de facto authorities [70]. The UN OHCHR reported over 700 civilians killed in continuous military attacks (mostly airstrikes) between August 2025 and 31 January 2026, and conflict monitors estimate total conflict-related fatalities since the coup exceed 100,000 [95][108]. OHCHR further identified foreign actors supplying weapons and fuel as facilitating rights violations and warned that cuts in international assistance have degraded emergency healthcare, medicine supply chains, and health facilities [95].

Political Freedoms and Recent Laws

The humanitarian and political environment in late June–early July 2026 remained highly restrictive. The Myanmar Health Cluster reported a rise in IDPs to 3.8 million as of 8 June 2026, with 47% of 251 townships facing high access constraints and only 8% being relatively accessible; the worst access and inter-sectoral severity were concentrated in Sagaing and Rakhine due to checkpoints, administrative restrictions, and violence against humanitarian personnel [95]. UNHCR reported 5.4 million people forcibly displaced and 1.6 million refugees and asylum-seekers in the region as of endMay 2026, while highlighting ongoing operational and access challenges for humanitarian actors across the country [96][71]. The regime continues to restrict core political freedoms through prosecutions and detention of high-profile opposition figures. Aung San Suu Kyi is serving a sentence reported at approximately 18 years after successive reductions from an original 33year term following convictions—including alleged violations of the official secrets law and corruption—widely described as politically motivated [79]. Visits to her have been limited to a very small set of interlocutors, including former Thai foreign minister Don Pramudwinai and China's Wang Yi [84][79]. Min Aung Hlaing's highly restrictive election and assumption of the presidency in April 2026 have not secured ASEAN endorsement, and Myanmar remains subject to a ban on attendance at ASEAN leaders' summits, underscoring its diplomatic isolation [84][79]. Academic freedom and civic space remained under direct pressure, with the Southeast Asia Coalition for Academic Freedom noting university closures, imprisonment of scholars, and displacement of students under the junta's crackdown on education [82]. Independent media and journalists continue to face severe repression, with news organizations reporting arrests, legal harassment, physical assaults, and torture against reporters and staff covering abuses [112]. The contested governance landscape—illustrated by actors exercising effective control in parts of Rakhine and other areas—complicates application of formal law and raises practical questions about engaging de facto authorities for humanitarian access, a policy gap highlighted in analysis of Myanmar's fragmented authority structures [70]. Internal armedgroup tensions within the antijunta movement also pose political risks: more than 90 prorevolution and civil society organizations issued a 28 June appeal urging that internal disputes be resolved nonviolently after clashes in Mandalay Region in June in which at least four PDF fighters were reported killed [100]. International scrutiny continued, with the UN Special Envoy visiting in April 2026, the UN Human Rights Council appointing a new Special Rapporteur on Myanmar in April 2026, and UN agencies reporting efforts to strengthen localised humanitarian partnerships despite access constraints [71][96].

Influence of Non-State Actors and Political Factions

The conflict has produced a fragmented political landscape in which EAOs and resistance forces have expanded authority while junta control has diminished. In Rakhine State, the Arakan Army (AA) is increasingly performing governance functions—including local administration, policing, dispute resolution, and taxation—shifting effective local authority and complicating humanitarian engagement [70]. Local non-state actors in Myanmar have assumed significantly more leadership and responsibility for humanitarian response in recent years, though their operational space remains uneven and constrained by conflict dynamics and access restrictions [64][67]. UNHCR strengthened response capacity through partnerships with 16 national and nine international partners to expand assistance and access in hardtoreach areas [96]. Factional tensions among resistance forces surfaced in June 2026 when disputes between the NUGaffiliated PDF and the People's Liberation Army in Mandalay Region reportedly left at least four PDF fighters dead, prompting a coordinated appeal by over 90 prorevolution and civil society organizations on 28 June calling for nonviolent resolution of internal disputes and unity against the junta [100].

Womenled organizations have been frontline responders during the March–June 2026 fuel crisis but report exclusion from decisionmaking and operational strain: a May 2026 survey of 63 organizations found 52% said womenled groups were not engaged

in crisis mitigation discussions and 56% reported women losing jobs or being forced to quit because of rising travel costs, with the Gender in Humanitarian Action (GiHA) Working Group cochaired by UN Women and UNFPA [74][76][78].

Public Trust in State Institutions

Public trust in state institutions has been severely eroded by escalating hostilities, governance fragmentation, and the junta's selective external engagement. Reports of attacks on healthcare between 10–23 June 2026 documented disruptions to service delivery that further undermine public confidence in state protection and basic services [117]. The political landscape is fragmented, with de facto authorities such as the AA consolidating control in parts of Rakhine State and performing administrative, policing, dispute resolution, and taxation functions that challenge the central government's legitimacy [70]. The junta denied an ASEAN special envoy access to detained former leader Aung San Suu Kyi after moving her to a designated residence and reducing her sentence, while Min Aung Hlaing made his first visit to an ASEAN member state (Laos) on 3 July 2026—reflecting selective external engagement amid limited regional endorsement and raising concerns about judicial independence and executive accountability [98][116]. Escalating hostilities have exposed civilians to forced recruitment, extortion, arbitrary detention, family separation, and restrictions on movement, while smallscale spontaneous returns of Rohingya from Bangladesh continue to expose returnees to risks of detention, exploitation, and other protection concerns [96].

Role of Marginalized Groups

Marginalized groups—particularly women, internally displaced populations, and Rohingya—face reduced influence in decisionmaking, constrained access to services and protection, and weakened representation in formal governance and humanitarian fora. The Myanmar GiHA Working Group—cochaired by UN Women and UNFPA—reported from inperson consultations and a May 2026 survey of 63 organizations that 70% of respondents said fuel shortages increased women's dependence on male family members, 52% said women-led groups were not engaged in crisis mitigation discussions, and 56% reported women losing jobs or being forced to quit due to rising travel costs [74][76][78]. The same survey found 46% reporting electricity and connectivity disruptions limiting access to financial services, 62% reporting increased borrowing, and respondents citing labour exploitation (33%), forced marriage (18%), survival sex for money (16%), and sex for food or fuel (8%) as coping strategies [74]. Crosscutting barriers—including gender and social norms, geographic remoteness, the digital divide, and fear of retaliation—further constrain civic and social participation and limit affected people's ability to influence decisions [81]. Independent learning on localisation shows that local and national actors in Myanmar have taken on significantly more responsibility and leadership in crisis response in recent years, driven by evolving needs and access and security constraints limiting international operations [64][67]. More than 90 prorevolution and civil society organizations issued a joint call on 28 June 2026 urging resistance and political forces to resolve internal disputes nonviolently and to uphold political equality and unity, reflecting active civic mobilisation despite the conflict [100].

Security And Stability

Security Overview

Armed conflict remains intense, with continued junta airstrikes and shelling causing civilian deaths and repeated attacks on populated areas [151][175]. OHCHR reported over 700 civilians killed in continuous military attacks between August 2025 and 31 January 2026, mostly from airstrikes in the Northwest and Rakhine State [151]. As of end-May 2026, UNHCR reported an overall 5.4 million forcibly displaced due to the Myanmar situation, with an estimated 3.8 million people internally displaced inside Myanmar, while humanitarian access and funding have been strained by diverted resources to the Middle East [130]. Humanitarian access is further impeded by denial of assistance, military blockades, NGO registration issues, and reductions in international support, degrading emergency health services and medical supply chains [151]. Attacks on health care are being systematically tracked, and partners reported intensifying impediments to health workers, patients, and supplies, prompting cluster-level AWD preparedness and incident reporting measures in late June 2026 [128][151]. De facto authorities — notably the AA in Rakhine — have consolidated control over large areas and increasingly perform governance functions including administration, policing, and taxation, complicating engagement and aid delivery [164].

Cross-border pressures are also mounting: Bangladesh officially closed its border, with 1,893 people denied entry between 1 January and 31 May 2026, biometric identification completed for 2,260 new arrivals in the same period, and over 1,000 arrivals recorded into Mizoram, India, following instability and airstrikes in Northwest Myanmar [130]. Environmental and logistical risks are rising simultaneously, with monsoon flood warnings issued for the Ayeyarwady Delta and Yangon areas, the Start Fund flagging flooding risk in July 2026, and an emerging El Niño potentially increasing drought risk later in 2026 [173][147].

A fuel crisis that began in March 2026 has caused severe shortages and price spikes, constraining humanitarian operations and protection services and producing notable gendered protection impacts: 84% of respondents reported feeling less secure due to reduced public lighting, 68% reported delays in GBV and maternal referrals, 70% noted increased dependence of women on male family members, and 52% reported women-led organizations were excluded from mitigation discussions [170][173][145]. Overall, intensified hostilities, territorial fragmentation, constrained access, and supply shortages present major, overlapping threats to civilian protection, aid-worker safety, and the continuity of humanitarian operations in mid-2026.

Security Forces and Law Enforcement

Since late June–early July 2026, Myanmar security forces have continued airstrikes, arrests, checkpoint restrictions, and seizures that directly impede humanitarian access and civilian protection [138][151][136]. Monitoring by Insecurity Insight and the Health Cluster records at least 1,939–1,943 attacks on health care since February 2021, with approximately 175 health workers killed, roughly 931–932 arrested, health facilities damaged on at least 506–509 occasions, and about 65% of recorded attacks attributed to the Myanmar Armed Forces (MAF) [138][136].

OCHA and Health Cluster access monitoring in May–June 2026 found severe constraints: 47% of 251 townships faced high access restrictions, only 8% were relatively accessible, and Sagaing and Rakhine were among the most difficult-to-reach areas with over 1 million people in need [151]. Checkpoint impediments, administrative restrictions, and increased violence against humanitarian personnel—including confiscation of medical equipment and targeted arrests—have worsened across dozens of townships since late 2025, further hampering aid delivery [151][128]. Local and international responders report growing risks to aid workers from detention, surveillance by checkpoint authorities, and targeting of large distributions or detailed beneficiary registration due to fears of surveillance and airstrike risk [134].

The junta has been conducting territorial operations to reclaim areas and reopen trade routes, even as many border crossings remain under the control of groups opposed to the regime, slowing cross-border commerce and complicating security and law enforcement at frontiers [127][129]. Expanded militarisation and increased troop deployments in frontline townships have contributed to displacement, travel restrictions, and reduced access to services for civilians [156]. In parallel, Myanmar's leader Min Aung Hlaing pursued diplomatic visits to China, India, and Laos in late June–early July 2026, part of efforts to consolidate external engagement for the military-backed administration [127][160]. Security operations have also included high-profile drug interdictions, with more than 50 tonnes of seized narcotics valued at nearly US\$600 million publicly destroyed on 26 June 2026 [149]. Ongoing administrative barriers imposed by de facto authorities, including NGO registration restrictions, have forced some partners to cease activities and increased reliance on local protection mechanisms, prompting calls for strengthened duty-of-care and security support for field staff [151][134].

Demography

Demographic Overview

As of end-May 2026, UNHCR reported 5.4 million people forcibly displaced, including an estimated 3.8 million internally displaced inside Myanmar and 1.6 million refugees and asylumseekers in neighbouring countries [179][185]. Conflict and displacement are concentrated in regions including Sagaing, Rakhine, Chin, Kachin, Shan and Magway, while ACLED recorded over 1,200 distinct armed groups operating in the civil war [188][184]. Humanitarian access remained severely constrained, with OCHA reporting that 47% of 251 townships faced high access constraints while only 8% were relatively accessible [188].

In Bangladesh, UNHCR recorded 1,197,411 registered refugees as of 31 May 2026 (51.5% female), with approximately one million Rohingya hosted across 16 camps in Cox's Bazar [199][209]. Between 1 January and 31 May 2026, 2,260 new arrivals were biometrically identified, bringing the total identified since 2025 to 152,029 individuals (39,881 families); the biometric exercise issues family cards but does not issue individual refugee documents [179][199][209]. During the same period, 1,893 people were reportedly denied entry to Bangladesh [179][199][209].

Crossborder flows into India increased due to instability in Northwest Myanmar, notably in Chin and Sagaing, with more than 1,000 reported crossings into Champhai district, Mizoram; most new arrivals reside dispersed with relatives or host communities rather than in centralized shelters [179]. Boat arrivals to Malaysia included a high proportion of children and unaccompanied or separated children, prompting urgent protection, familytracing and communitybased care needs; UNHCR advocacy contributed to the release and reunification of 15 people, predominantly children, in May 2026 [179].

Socio-Cultural

Socio-Cultural Overview

Local civil society and community-based actors—including women-led, disability-focused, and refugee-led organizations—have assumed greater leadership in humanitarian response in Myanmar, driven more by necessity than by intentional localisation processes, but operating in a severely restricted civic space where local voices are often sidelined by international actors and decision-making is constrained by security and access limitations [223]. UNHCR has expanded partnerships to strengthen localized response capacity, working with 16 national and nine international partners in Myanmar coordination efforts [245]. Regional AAP/PSEA survey findings underscore that national and local NGOs are central to accountability efforts (46% of respondents were national/local NGOs), but that coordination, feedback loops, and collective community engagement remain uneven, limiting meaningful community participation in humanitarian decision-making [235][237].

Large-scale displacement is placing heavy pressure on local protection and social networks, with an estimated 3.8 million IDPs as of early June/end-May 2026 and 5.4 million forcibly displaced within the broader Myanmar situation as of end-May 2026 [230][245]. Localized military offensives have compounded this pressure; for example, fighting around Mindat since May 2026 displaced over 17,000 people [268]. Rising violence in Rakhine—including repeated airstrikes and reported clashes involving the AA and Arakan Rohingya Salvation Army (ARSA)—has increased pressure on Rohingya communities, heightened intergroup tensions, and produced fears of new cross-border displacement to Bangladesh [246][240].

Governance on the ground is fragmented: de facto authorities and ethnic armed groups increasingly perform administrative, justice, and service functions, complicating interactions between communities, humanitarian actors, and formal/state actors, and shaping local perceptions of legitimacy and safety [224]. Attacks on health services and reprisals against health personnel—including the reported arrest and torture of a CDM-affiliated health worker on 19 June 2026—are eroding trust in service delivery and undermining locally driven protection and health mechanisms [222][230].

Gender Dynamics

A June 2026 brief by the Myanmar GiHA Working Group—co-chaired by UN Women and UNFPA—found that the March 2026 fuel crisis is deepening gender inequalities and constraining women's access to services, justice, and decision-making [219][218][217]. The analysis draws on in-person consultations with 21 women-led organizations and an online survey of 63 women-led organizations, civil society,

and humanitarian actors conducted over two weeks in May 2026; respondents were predominantly women aged 36–50 with highest representation from Mandalay, Yangon, Southern Shan, and Kachin [217]. Key findings include:

- 70% reported fuel shortages increased women's dependence on male family members [217].
- 56% reported women losing jobs or being forced to quit because of rising travel costs [217].
- 52% reported women-led organizations are not being engaged in fuel-crisis mitigation discussions, reducing women's influence over decisions that affect them [217].
- 46% reported electricity and connectivity disruptions are limiting women's access to mobile money, cash transfers, and financial services [217].
- 44% reported higher transport costs are affecting girls' school attendance or contributing to dropout [217].

The crisis is also driving harmful coping strategies: 62% reported increased household borrowing, while respondents also reported labour exploitation (33%), forced marriage (18%), survival sex for money (16%), and sex for food or fuel (8%) [217]. Women and girls are carrying increased unpaid care burdens, and women sustain much of the frontline humanitarian response. The brief recommends prioritizing fuel access for services women and girls depend on—including health, GBV referrals, ambulances, outreach, and mobile services—and sustaining women-led organizations at the frontline of the response [219][217][218].

Intensifying conflict and cuts to international assistance have degraded emergency health provision and supply chains, further limiting women's access to health and protection services in affected areas [230]. Regional AAP/PSEA findings note that gender and social norms restrict women's access to formal feedback channels and participation—a barrier that is acute in conservative and conflict-affected areas such as Myanmar [235].

Impact of Socio-Cultural Drivers on Aid

Socio-cultural barriers significantly shape both the delivery and uptake of humanitarian aid in Myanmar. Regional AAP/PSEA assessments (April 2026) identify a trust deficit and multiple participation barriers—including language and literacy challenges, gender and social norms restricting women's use of feedback channels, geographic remoteness, and fear of retaliation—all undermining accountability and safe reporting in conflict-affected settings [237][235]. Reports of increased sexual violence linked to trafficking and cyberscam compounds in the region, including cases in Myanmar, further compound stigma and barriers for survivors seeking assistance [256].

Humanitarian guidance emphasizes adapting partnerships and funding to address these socio-cultural constraints—covering costs for participation (transport, translation, staff time); deliberately engaging and resourcing women-led, disability-focused, and grassroots groups; and sharing risk and mentorship to improve inclusion and social cohesion [223]. In practice, however, the localization shift has been uneven: 52% of surveyed respondents reported that women-led organizations are not being engaged in crisis-mitigation discussions, and coordination, feedback loops, and collective community engagement remain inconsistent [217][235][237].

Environment

Environmental Conditions

Myanmar's geographic and climatic context creates compounding vulnerabilities across multiple dimensions. The country's inclusion in the Hindu Kush–Himalaya region links it to broader shifts in mountain and watershed dynamics—changing rain patterns, increased landslide risk, and altered river systems—that compound agricultural and water-resource vulnerabilities [286]. Regional ENSO outlooks in late June–July 2026 indicate a likely El Niño/positive IOD through OND 2026, raising the probability of a drier-than-normal monsoon, elevated drought risk later in 2026, and greater food, water, and WASH stress across affected areas [314][299][300]. Climate modelling also warns of increased frequency of episodic flooding that could severely affect large Southeast Asian cities, explicitly naming Yangon among urban centers vulnerable to such events from combined climate and sea-level variability [285]. Environmental contamination from unregulated rare-earth and other mineral extraction in Kachin and Shan States has degraded water quality and river sediments, creating toxic waste (notably arsenic) and bioaccumulation risks for riverine ecosystems and food chains in border river systems, with calls for stronger regulation of operators [291].

Environmental Challenges

The ongoing conflict in Myanmar is compounding existing environmental and health vulnerabilities. Military airstrikes in April 2026 in Mu Traw (Hpapun) District destroyed houses, a clinic, and a school, and damaged or destroyed productive assets including rice mills, ploughing tractors, machine saws, diesel engines, and generators, forcing villagers to flee to nearby forests or across the border to Thailand [319][322]. As of May 2026, displaced populations remained without shelter, food, or external support, and the combined effect of infrastructure and asset destruction, displacement into forest areas, and constrained access to health and WASH services is undermining livelihoods and increasing environmental health risks across affected communities [319][322]. The approaching monsoon is further intensifying risks of acute watery diarrhoea (AWD), malaria, and dengue, while limited diagnostics continue to delay detection and response efforts [300].

Environmental Risks and Mitigation

Forecasts and early-July models indicate heavy rainfall and high flood risk across Myanmar in the first two weeks of July, with GLOFAS and NOAA projecting significant rainfall and the Department of Meteorology and Hydrology forecasting moderate to heavy rain [299]. The Start Fund monthly bulletin similarly flagged flooding in Myanmar as an anticipated hazard for early July [273].

IFPRI reported flood warnings for low-lying areas including the Ayeyarwady Delta, Bago, the Sittaung River Basin, and Yangon, with fisheries authorities advising pond owners to take preventive measures against pond flooding and fish losses [272]. Short-term heat risk was also forecast for late June–early July, with abnormally hot temperatures expected in parts of Myanmar during that period [314]. A new El Niño phase is expected to develop in the coming weeks, raising medium-term drought risk even as short, intense rain events continue to threaten floods and landslides, creating concurrent drought–flood exposure for agriculture and water supplies [272][300]. Monsoon rains have already destabilized mining waste heaps: a late-June collapse of a slag/mine-waste heap in Hpakant (Kachin) killed at least five people and left others missing, illustrating acute landslide and site-stability hazards at mining sites during heavy rainfall [274][277][292]. In response, localized AWD outbreaks in Kachin and Rakhine have been rapidly managed through coordinated health–WASH responses [278]. AWD preparedness workshops and use of the WASH Cluster’s AWD Prioritization Tool (tested in Kachin on 4–5 June) are being implemented, and UNICEF-led AWD preparedness actions and Health Cluster preparedness activities are planned or ongoing to prioritize high-risk townships [300][278]. Multisectoral zonal contingency planning, Health Cluster preparedness measures (surveillance, market and supplier assessments, training), and joint AWD action planning are underway to strengthen readiness for flood- and monsoon-related health risks, while early-warning forecasts (GLOFAS/NOAA/MDMH) and Start Fund alerts are being promoted to enable anticipatory action where feasible [300][278][299][273].

Conflict

Overview of the Ongoing Armed Conflict

The conflict began after the February 2021 military coup and has evolved into a fragmented civil war that monitoring groups estimate has caused over 100,000 conflict-related deaths and produced more than 3.7 million IDPs [348][339]. Active fighting and intensified aerial bombardment continue across multiple states and regions, notably Rakhine, Chin (Mindat and Kanpetlet), Kachin, Sagaing, Magway and parts of Kayin, with frontline clashes and frequent airstrikes reported in late June 2026 [381][364][360]. Junta air campaigns around Mindat intensified from mid-May and culminated in heavy bombardment on 29 June 2026 that killed three children and involved dozens of bombing runs and multiple bombs in a single day [364][381]. The military has employed heavy explosive ordnance—including fighter jets, Y-12 aircraft, large 300–500 lb bombs, rockets and reported cluster munitions—causing wide-scale destruction of villages and civilian infrastructure in affected areas [345][339]. Attacks on health care have been sustained: monitoring groups and the Health Cluster document roughly 1,900–1,940 incidents against health services since 2021 (about one attack per day), with around 175 health workers killed, over 930 arrested, and health facilities damaged on at least approximately 506–509 occasions [344][350][360]. Destruction of clinics, schools and places of worship, and repeated bombardment have driven large-scale displacement and localized flight to forests or across the Thai border, with many displaced communities reporting little or no external assistance [345]. Humanitarian access is constrained by militarization of civilian areas, troops billeting in homes, local monopolization of food supplies by junta actors, and restrictions on returns, aggravating livelihood and assistance shortfalls [366][379]. The conflict’s fragmentation—ACLED records over 1,200 distinct armed groups—complicates ceasefire prospects, local command-and-control and the delivery of principled humanitarian assistance [339].

Conflict Stakeholders

The primary state actor is the military regime—now a military-backed civilian administration since the general elections—, facing a highly fragmented array of non-state opponents: pro-democracy PDF units, numerous EAOs (including the AA, Kachin and Karen armed groups), and newly formed federal-unit forces such as the Magway Federal Unit and Chin resistance formations [353][342][359]. External involvement includes Chinese diplomatic and political support that analysts say has shifted dynamics in favour of the junta and facilitated truces with some ethnic armies, while the junta employs Russian- and Chinese-supplied aircraft in airstrikes [342]. Non-state actors are increasingly performing governance functions in areas they control—notably the AA, which has consolidated authority across much of Rakhine and runs local administration, policing and taxation, complicating humanitarian access and future planning for returns or reconstruction [353]. Since mid-May, coordinated resistance operations have been reported in southern Chin State, where CPU/CPA, ULA/AA and Magway Federal Unit forces have jointly resisted a large junta offensive around Mindat and Kanpetlet, with heavy clashes and significant junta troop deployments noted [359]. In late June 2026, internal resistance tensions surfaced: on 28 June, over 90 pro-revolution and civil society organizations issued a joint call for disputes to be settled non-violently after clashes between an NUG-affiliated PDF unit and the People’s Liberation Army in Mandalay that reportedly killed at least four PDF fighters [335]. The junta has also sought to link some armed groups’ resistance to illicit financing from narcotics; state authorities publicly destroyed large drug seizures on 26 June 2026—over 50 tonnes burned and valued at nearly US\$600 million—citing ties between drug profits and armed group revenues [384]. At the international level, the UN Special Envoy visited Myanmar and a new UN Special Rapporteur on human rights was appointed in April 2026, while UNHCR reported an estimated 3.8 million internally displaced by end-May 2026 [331].

Peace Negotiations

Peace efforts are effectively stalled: the junta has repeatedly ignored ASEAN’s 5PC and refused ASEAN requests to meet Aung San Suu Kyi, including a formal denial at a 30 June press conference [375]. ASEAN remains officially united on the 5PC but is frustrated, with several member states continuing deeper bilateral engagement with Myanmar while maintaining restrictions on junta participation in ASEAN summits [377][375]. Regional and international influence is polarising the process: China has deepened ties with the junta—backing truces with two powerful ethnic armies and providing political and material support—while Myanmar’s leader carried out recent diplomatic visits to China and India to secure agreements [342][348][377][338]. Opposition fragmentation and recent intra-resistance clashes further complicate mediation prospects, with more than 90 pro-revolution and civil society groups on 28 June urging non-violent resolution after clashes between NUG-affiliated PDF and the People’s Liberation Army in Mandalay Region that killed at least four PDF fighters [335].

The UN has engaged diplomatically—its Special Envoy, Julie Bishop, visited Myanmar for the first time since the late 2025–early 2026 general elections were held— but access and implementation constraints limit tangible progress toward a negotiated settlement [331].

Conflict Outlook

Prospects for rapid negotiated de-escalation are limited: major resistance blocs have rejected the junta's peace overtures, and the multiplicity of de facto authorities—including the AA exercising consolidated governance across much of Rakhine—complicates any single, nationwide settlement [342][353]. External dynamics are likely to sustain conflict momentum: China's support and Beijing-backed truces have strengthened the military's position, while recent high-level outreach—including Min Aung Hlaing's visit to Laos on 3 July 2026—signals growing regional engagement that may reduce Myanmar's isolation without resolving fighting or unifying pressure for ceasefire [342][377]. Economic shocks and climate risks compound humanitarian pressures: the March 2026 fuel crisis has sharply raised transport and input costs and inflation, and El Niño/flood warnings threaten agricultural production and livelihoods in the coming months [371][363]. Over one in five people face acute food insecurity [342], and protection concerns are widespread:

- 56% of surveyed organisations reported women losing jobs or being forced to quit because of rising travel costs [371].
- Common coping concerns include increased borrowing (62%), labour exploitation (33%), forced marriage (18%), survival sex (16%) and sex in exchange for food or fuel (8%) [371].

Overall, the balance of factors—ongoing airstrikes and attacks on services, countrywide fragmentation, external state support for the military, and weak prospects for a unified political settlement—point to a high risk of conflict intensification, further displacement and humanitarian need in the coming months, unless there is a major shift in external pressure or a credible, inclusive settlement [350][342][377][371].

Displacement

Displacement Overview

UNHCR reported large-scale, ongoing internal and cross-border displacement driven by escalating hostilities and protection risks in Myanmar [398][399]. As of end-May 2026, approximately 3.8 million people were IDPs within Myanmar, part of a regional total of 5.4 million forcibly displaced within the Myanmar situation [398][399]. About 1.85 million Rohingya remain stateless within the Myanmar situation (reference October 2025 figures) [398].

Cross-border movements reflect significant displacement pressures across the region. The Bangladesh border remains officially closed, with 1,893 people denied entry in May 2026 alone (bringing total denials since 2024 to 14,380), while biometric exercises identified 2,260 new arrivals during January–May 2026 and a cumulative 152,029 individuals (39,881 families) identified since 2025 [398][394]. Refugee registration in Bangladesh remains suspended since May 2022, and biometric identification does not issue individual refugee documents [398]. Arrivals into India rose amid intensified fighting, with over 1,000 people reported crossing into Champhai district (Mizoram), many residing with relatives or host communities rather than centralized shelters, producing dispersed border-area populations [398]. Malaysia reported boat arrivals with a high proportion of children, raising protection concerns [398]. UNHCR also reported small-scale spontaneous returns of Rohingya from Bangladesh to Rakhine, cautioning that returnees face detention, exploitation and other protection risks [398].

Localized militarization further drove displacement, as in Dooplaya District (January–March 2026) in Kayin, where villagers were forced to flee to farm huts, forests or across the Thai border, with some unable to return by March 2026 due to ongoing military presence and house burnings [425][405]. Forced displacement is protracted, linked to trends since 1 February 2021 and ongoing airstrikes, shelling, forced recruitment, extortion and arbitrary detention [398].

Living Conditions of the Displaced Population

As of end-May/early June 2026, the scale of displacement—3.8 million IDPs internally and 5.4 million forcibly displaced regionally—places heavy strain on protection and assistance capacities [398][409]. UNHCR and partners reported delivering core relief items to over 74,000 people, shelter support to around 3,000 people (559 families) and multi-purpose assistance to approximately 3,300 people (1,146 families) by end-May 2026 [398]. Despite these efforts, funding shortfalls and diverted resources are compounding gaps in shelter, WASH and basic services, leaving needs unmet across high-severity areas such as Sagaing and Rakhine and reducing durable livelihood opportunities for displaced households [398][409].

Health services are disrupted and at risk of outbreaks, with clusters noting diagnostics shortages delaying detection, measles preparedness needs in Rakhine and Chin, acute watery diarrhoea (AWD) risks ahead of the monsoon, and rising malaria among pregnant women in Southeast Myanmar, despite continued sexual and reproductive health (SRH) and mobile clinic efforts [409]. Intensifying insecurity and militarization—including air strikes and checkpoints that caused displacement and civilian casualties in April–June 2026—are undermining safety, restricting movement to markets and health facilities, and damaging livelihoods [430][405].

The March–June 2026 fuel crisis and soaring transport costs have further eroded economic stability and mobility, limiting referrals, outreach and access to care [400][402]. Administrative hurdles, including NGO registration requirements, have forced some partners to cease activities entirely, further impeding service delivery to populations in need [409].

Drivers of Displacement

Armed conflict—encompassing escalating airstrikes, shelling, forced recruitment, extortion, arbitrary detention, family separation and restrictions on movement—is the primary driver of displacement in Myanmar [398][409].

Humanitarian access constraints are severe: of 251 townships assessed, 47% face high access constraints and only 8% are relatively accessible, with Sagaing and Rakhine among the worst-affected areas accounting for over one million people in need, and access difficulties increasing in dozens of townships [409].

Economic shocks have compounded displacement pressures. A severe fuel crisis beginning in March 2026 roughly doubled gasoline prices, nearly trebled diesel costs and drove inflation to approximately 24.6% in April 2026, raising food and input costs, undermining livelihoods and slowing recovery [400][410]. These pressures are gendered: surveys of local organizations found 56% reporting women losing jobs or being forced to quit due to rising travel costs, with households turning to increased borrowing (62%) and reporting incidents of labour exploitation (33%), forced marriage (18%) and survival sex (16%) as coping strategies [400].

Protracted persecution and statelessness—most notably affecting the approximately 1.85 million stateless Rohingya—alongside small-scale spontaneous returns from Bangladesh that expose returnees to detention and exploitation, further compound displacement drivers [398]. Pre-existing environmental shocks, including the March 2025 earthquake that left extensive damage, continue to interact with conflict and economic pressures to impede returns and drive secondary displacement [410]. UNHCR and Protection Cluster assessments additionally note rising psychosocial needs and gaps in referral services, notably in Kachin State, while livelihood priorities remain acute in Shan and Kayah [398].

Integration

Integration prospects for displaced populations inside Myanmar and in host countries remain severely constrained. Within Myanmar, fuel and transport price rises, insecurity and active combat operations have sharply limited economic opportunities; residents report soaring prices and a lack of jobs in towns such as Kyaukphyu in Rakhine, while high petrol costs have limited travel to markets and healthcare in areas like Dooplaya District in Kayah [436][405]. Women are disproportionately affected, with 56% of surveyed respondents reporting women losing jobs or being forced to quit because of rising travel costs, and other harmful coping strategies—including increased debt and labour exploitation—rising as incomes contract [400].

Education and skills support remain limited by conflict and displacement: students in some areas were unable to study due to fear of airstrikes, and UNHCR's 2026 planning for Rohingya responses explicitly prioritizes education, skills and capacity-building as part of durable solutions and protection objectives [405][394]. Protection Cluster assessments identified growing psychosocial support needs and gaps in referral services, notably in Kachin State, while earthquake recovery gains are being undermined by rising fuel and input costs that slow livelihood recovery and service restoration [398][405][410].

In host countries, policy environments present a mixed picture. Malaysia launched a Refugee Registration Document Programme in 2026, with stakeholders signaling interest in linking documentation initiatives to more regulated employment pathways, while UNHCR and partners continue advocacy on documentation and lawful employment in Thailand [398]. Bangladesh has suspended regular refugee registration since May 2022, relying on biometric family-card exercises that do not grant individual identity documents, with UNHCR continuing to advocate for full registration [395][398]. Social cohesion is under pressure: rising misinformation and negative public narratives in Malaysia since late May 2026 have increased anxiety and protection risks for refugees, while competition over scarce resources is driving tensions in displacement-affected areas of Myanmar [398][436].

Humanitarian Access

Humanitarian Access Overview

OCHA's May 2026 Humanitarian Access Severity Monitoring found that, of 251 townships, 47% face high access constraints and only 8% were relatively accessible, with the most difficult-to-reach townships concentrated in Sagaing and Rakhine and together accounting for over 1 million people in need [451]. Compared to October 2025, the situation worsened in 21 townships and access challenges increased in 53, driven by checkpoint impediments, administrative restrictions—including NGO registration requirements imposed by de facto authorities—and violence against humanitarian personnel and assets, causing some partners to cease activities [451]. OHCHR and monitoring groups recorded sustained attacks on civilians and attacks on health care—driven by airstrikes and shelling in Northwest and Rakhine—which have further reduced safe humanitarian operating space; OHCHR documented over 700 civilians killed in continuous military attacks between August 2025 and 31 January 2026 [451][460]. UNHCR and partners report that reductions in international funding and the Gulf-driven fuel crisis have forced programme cuts, raised operational costs, and increased reliance on national and local partners, area-based/zonal coordination groups, and trusted intermediaries for remote or technical support [450][452][451]. Humanitarian delivery modalities currently include camp-based distributions (including LPG provision jointly by UNHCR and IOM), solarization of water systems, and market-based supply chains, but these modalities are vulnerable to monsoon-related road blockages, supply-chain disruptions, and fuel shortages [452][463][458][451]. Accountability and protection mechanisms are under strain: regional AAP/PSEA surveys and cluster partners report AAP/PSEA coordination operating under heavy pressure and call for administrative simplification, dedicated duty-of-care resources, and protected funding for AAP/PSEA functions [442][444][451].

Barriers to Humanitarian Access

Humanitarian access in Myanmar is heavily constrained by active conflict (airstrikes and shelling), checkpoint and administrative impediments, rising fuel and transport costs, restrictive border and political measures, onerous donor/agency compliance that excludes many local partners, surveillance and community distrust, and direct risks to health facilities and aid workers including confiscation of supplies and detentions [451][440][458][452][460][442]. Strict administrative and compliance requirements prevent many grassroots health and humanitarian actors from being contracted or funded, as partners struggle with legal registration, opening bank accounts, complex English-language reporting formats, and requests for operational details—including GPS coordinates—that pose security risks [451].

Aid operations are further hampered by harassment and targeting of staff and assets, including arrests/detentions, checkpoint seizures, confiscation of medical equipment and relief consignments, and the need to conceal or split shipments to avoid confiscation—practices that raise costs and reduce delivery frequency and coverage [440][460]. Rising fuel prices and shortages, linked to broader regional instability, have driven up transport and operational costs, constrained referrals and mobile services, and reduced the reach of services in remote areas [458][452][453]. Fuel- and mobility-related barriers disproportionately affect women's safety, livelihoods, and participation, with reports that fuel shortages have increased women's dependence on male household members and that women-led organizations are often excluded from crisis-mitigation discussions [445]. Community engagement and feedback channels are also under strain: collective AAP mechanisms are scaled back, feedback loops remain weak, and fear of retaliation or surveillance leads many communities to refuse sharing detailed beneficiary IDs, undermining needs assessment and targeting [442][444][440]. Cross-border access to Bangladesh remains constrained: between 1 January and 31 May 2026, 1,893 individuals were reportedly denied entry (14,380 denied since 2024), while 2,260 newly arrived people were biometrically identified through a government-joint exercise (total identified since 2025: 152,029), and regular refugee registration remains suspended [452][453][463].

Humanitarian Access Gaps

As of 8 June 2026, an estimated 3.8 million people were internally displaced in Myanmar according to UNHCR, with separate reporting indicating some 5.4 million people forcibly displaced within the Myanmar situation as of end-May 2026 [451][463][450]. Active frontline fighting and intensified airstrikes have sharply constrained humanitarian access across multiple states—notably Chin (including heavy combat around Mindat and Kanpetlet since mid-May), Kachin, Sagaing, Shan, Kayah, and Rakhine—with sustained offensives and heavy clashes reported in late June 2026 [483][484][463]. Attacks on health care and related incidents recorded between 10–23 June 2026 further limited medical service delivery and safe access for responders [460]. Critical unmet needs affect IDPs, Rohingya refugees and asylum-seekers at borders, women and girls who face sharply reduced access to health, justice, and local services due to the March 2026 fuel crisis and reduced capacity among women-led organizations, and separated or unaccompanied children among recent boat arrivals [463][454][456]. Thai authorities reportedly deported Rohingya before UNHCR access and restricted shelter access for Rohingya children [463]. Sectoral shortfalls include disrupted health referrals and psychosocial support (notably gaps in Kachin), insufficient livelihoods assistance in Shan and Kayah, and worsening food-security pressures driven by fuel scarcity and rising transport and input costs [463][492]. Humanitarian coordination and AAP/PSEA mechanisms are operating at reduced capacity, with local and national actors increasingly shouldering response leadership amid stretched resources [444][440]. UNHCR and partners have expanded partnerships (16 national and nine international partners) and advocated for resumption of full refugee registration to improve reach to hard-to-reach areas, but border denials, protection risks, and service gaps remain unresolved [463]. Anticipatory hazards—including forecast flooding in July 2026 and an emerging El Niño increasing drought risk—threaten to further restrict access and amplify humanitarian needs [499][492].

Information, Communication and AAP

Information Landscape

Humanitarian information on Myanmar in late June–early July 2026 is produced by UN clusters and agencies, local civil society monitors, and regional AAP/PSEA bodies that publish regular situation and cluster bulletins and incident reports [512][506][545][503]. UN sources document high displacement and ongoing response activity: UNHCR reported 5.4 million forcibly displaced within the Myanmar situation as of end-May 2026, while the Health Cluster reported 3.8 million internally displaced as of 8 June 2026, and UNHCR and partners delivered core relief items to over 74,000 people alongside shelter and multipurpose assistance in 2026 [506][512]. Coordination and data sharing occur through cluster structures and interagency mechanisms—UNHCR leads Protection and Shelter coordination in Myanmar, the Rohingya Coordination Team (RCT) was introduced in January 2026 for the Bangladesh response, and joint UNHCR–WFP helpdesks and Health Cluster bulletins are used to share assessments and strengthen complaint/feedback handling at distribution points [506][517][523][512]. Local monitoring organizations provide community-gathered incident data—including trained community researchers and detailed incident logs—which supplement UN/cluster reporting, but validation and verification are constrained by access, security incidents (including attacks on health services), and administrative restrictions reported in May–June 2026 [545][536][512]. Seasonal and anticipatory information (WMO/ENSO analysis, Start Fund risk bulletins) was circulated in July 2026 to inform preparedness and early action, offering meteorological forecasting inputs that humanitarian actors can use alongside operational needs data [530]. Overall, the information landscape is multisourced and operationally active but hampered by restricted humanitarian access, security risks, and weak feedback loop closure that reduce the reach, timeliness, and perceived reliability of information for affected populations and frontline responders [512][545][500].

Communication Channels

Information is exchanged via monitored public social media and open-source monitoring, formal online reporting platforms (notably WHO's Surveillance System for Attacks on Health Care), online surveys and Kobo questionnaires, and community-level awareness sessions and complaints/feedback mechanisms including in-person consultations [536][505][512][506][502]. Use of mobile and digital platforms is undermined by geographic remoteness and a digital divide, fuel and connectivity-related disruptions that limit access to mobile money and services, fear of retaliation in conflict areas, and administrative and reporting barriers—including legal registration requirements, English-language reporting formats, and risks from sharing GPS coordinates—that can prevent partners from engaging or reporting safely [500][502][518][512]. To improve timeliness and reporting despite these constraints, clusters and agencies have promoted targeted tools and trainings, including AWD prioritization workshops, Kobo questionnaires, SSA awareness sessions, and community feedback and complaints awareness initiatives [512][505][506].

Barriers to Information

Multiple, overlapping barriers prevent affected populations in Myanmar from accessing critical information. Language, literacy, and mixed-language settings limit participation in feedback channels, as identified in the AAP/PSEA regional survey of April 2026 [500]. Geographic remoteness and a persistent digital divide hinder community engagement in rural and hard-to-reach areas, a cross-cutting barrier noted in both the April 2026 survey and learning brief findings on local leadership [500][504]. Fuel shortages, high transport costs, and travel restrictions between January–March 2026 reduced people's ability to reach health services and information hubs in Doooplaya (Waw Ray) Township in Kayin [541][540]. Repeated airstrikes and intensified military activity—including mid-April 2026 strikes—have driven displacement, discouraged gatherings for distributions, and left communities unreachable for information and aid [549][504]. Digital surveillance, targeted arrests of aid and health workers, and fears around sharing detailed beneficiary data undermine trust and willingness to engage with information or feedback mechanisms, as reported in June 2026 incident briefs and broader learning findings [536][504][512]. Administrative and compliance barriers—strict NGO registration rules, inability of many local partners to open formal bank accounts, and complex English reporting formats—prevent local actors from being contracted or fully participating in information systems, according to WHO localization reporting in June 2026 [512]. Forecasts of heavy monsoon rains and flooding for early July 2026 risk further isolating communities and disrupting communications and access to information [530]. Partners and clusters have urged strict data anonymization, use of trusted intermediaries, and inclusion of security and duty-of-care resources to mitigate these risks, as recommended in the Myanmar Health Cluster bulletin of 30 June 2026 [512].

Misinformation and Rumors

Surveys and humanitarian assessments document a clear trust deficit and the prevalence of rumours in conflict-affected settings in Myanmar. Communities have been reported as sceptical that feedback will lead to change and fearful of retaliation, limiting reporting to formal channels, based on a survey conducted in April 2026 [500]. Perceptions that organisations or partners are politically affiliated—and the consequent scrutiny and operational risks for local staff—have been reported as drivers of harmful rumours and operational obstacles in the country [504]. As of 30 June 2026, intensifying insecurity, administrative impediments to NGO registration, and severely restricted access have reduced outreach and community engagement, further aggravating miscommunication around assistance and information flow [512]. In the Rohingya response during April–May 2026, UNHCR and partners rolled out messaging campaigns, joint WFP–UNHCR helpdesks at distribution points, and strengthened complaint and feedback mechanisms to address community questions and reduce confusion during changes to food assistance targeting [523][517]. Regional AAP/PSEA findings from April 2026 call for simpler, contextualized feedback tools, stronger links between feedback channels and safe PSEA referral pathways, and peer learning to restore credibility of information channels—measures applicable to Myanmar where collective AAP mechanisms continue to operate but are under heavy pressure from access, security, and connectivity constraints [500][503]. Humanitarian partners have also recommended strict data anonymization, use of trusted intermediaries, and inclusion of security and duty-of-care resources (evacuation plans, psychosocial support, safety reserves) to rebuild trust and protect field staff and affected communities [512].

Accountability Needs and Transparency

Accountability mechanisms exist in Myanmar but are operating under heavy pressure from access, security, and connectivity constraints, and several interagency AAP coordination platforms have been suspended or scaled back since 2025 [503][500]. A regional survey captured the following:

- 81% of surveyed respondents reported implementing AAP-related activities across sectors [500].
- 97% reported that a PSEA policy is in place [500].
- 43% reported participation in an AAP or community engagement working group, indicating weak collective coordination [500].

UNHCR reported strengthening response capacity through partnerships with 16 national and nine international partners and expanding access to assistance during April–May 2026 as part of localization efforts [506][501]. Health Cluster and WHO actions in late June 2026 included plans to increase local partner roles in the 2027 HNRP, localization workshops held 16–19 June 2026, and proposals to preposition NCD supplies and include NCD questions in emergency assessments [512]. However, many local actors remain unable to be contracted or fully participate because of restrictive registration, contracting, and reporting requirements, with partners flagging complex English reporting formats and demands for GPS coordinates as security and operational barriers [512]. Women-led organizations were consulted in May–June 2026 on the fuel crisis, and the Myanmar GiHA Working Group (cochaired by UN Women and UNFPA) recommended flexible, multiyear funding, direct funding to women-led organizations, and duty-of-care measures to sustain frontline gender services [502][514][515]. Learning briefs and surveys note that increased local leadership in Myanmar is often driven by necessity rather than deliberate localization, with smaller grassroots and marginalized groups frequently sidelined and collective AAP coordination limited [504][510]. Attacks on health care and military access restrictions have further eroded community trust and impeded feedback and reporting channels, prompting calls to strengthen surveillance and reporting systems for attacks on health and to protect community-based accountability mechanisms [512][536]. Regional recommendations emphasize funding AAP/PSEA as core operational functions, investing in shared feedback and referral systems, and supporting national actors to lead AAP/PSEA working groups to close these gaps [500][503].

Legal and Policy

Legal and Policy Framework

The UN Special Envoy visited Myanmar and the UN Human Rights Council appointed a new Special Rapporteur on Myanmar in April 2026, reflecting ongoing UN-level political and human-rights engagement [566][568]. ASEAN's 5PC remains the bloc's stated framework but has gone unimplemented, and ASEAN has blocked Myanmar from summits since late 2021; the junta also denied ASEAN's requests to allow access to Aung San Suu Kyi, signaling refusal of regional scrutiny even as some member states have increased bilateral engagement [586][574][584]. Myanmar's leader Min Aung Hlaing made state visits to China, India and Laos in June–July 2026, securing multiple agreements—at least 18 with China—and signing memoranda of understanding with Laos [584][601]. Japan has suspended new development assistance to Myanmar since the February 2021 coup, and Human Rights Watch urged Tokyo on 30 June 2026 not to resume development aid while junta abuses and obstruction of humanitarian aid persist [588]. UNHCR leads the Protection and Shelter, Land and Site Coordination Clusters, and has strengthened regional mechanisms such as the Rohingya Coordination Team for the Bangladesh response, but UN agencies face severe access constraints that limit implementation of international response frameworks [568][566][570]. Commentators and analysts have consistently emphasized the absence of an agreed international framework for engaging de facto authorities that exercise effective control over territory—a gap that complicates legal, access, and reconstruction planning in Myanmar [565].

Humanitarian Impact of Legislation

De facto authorities' control over NGO registration has forced some humanitarian partners to cease activities, restricting legal operating space for local and international actors [570]. Administrative restrictions, checkpoint impediments, and violence against humanitarian personnel and assets left 47% of 251 townships with high access constraints and only 8% relatively accessible, with access worsening in 53 townships as of May–June 2026 [570]. Aid workers face rising arrests, detentions, checkpoint harassment, and digital surveillance, while requirements to collect detailed beneficiary identification deter community cooperation due to fears of surveillance [571]. Attacks on health care have been pervasive and systematic since the 2021 coup: open-source monitoring recorded roughly 1,939–1,943 incidents of violence against or obstruction of health care through mid-2026, including at least 175 health workers killed, over 930 arrested, and health facilities damaged on at least 509 occasions, with 65% of attacks attributed to the military—severely undermining service delivery and protection [581][585][572]. Cross-border legal and policy barriers further constrain asylum and freedom of movement: Bangladesh reported 1,893 denied-entry incidents between 1 January and 31 May 2026 (14,380 denials since 2024), and individual refugee registration has been suspended since May 2022, with biometric family-card exercises issuing family cards but not individual refugee identity documents [575][582]. UNHCR and partners are supporting improved access to civil documentation and lawful employment pathways in parts of Southeast Myanmar and in neighbouring countries, while national initiatives such as Malaysia's 2026 Refugee Registration Document Programme and restrictive practices in Thailand — including deportations and limited access to government shelters for Rohingya children — are reshaping protection and labour rights for refugees [568][575][582]. Reduced international funding and diversion of resources have compounded legal and administrative barriers by forcing programme cuts, increasing reliance on local actors, and eroding protection and service continuity [566][570]. Humanitarian partners call for administrative simplification, strict data-anonymization and confidentiality protocols, and principled, conditional engagement with authorities in line with international humanitarian law [570][565].

International Agreements Impacting the Crisis

The OHCHR reported over 700 civilians killed in continuous military attacks between August 2025 and 31 January 2026, and stated that foreign actors supplying weapons and fuel have facilitated human rights violations and denial of humanitarian assistance, highlighting contradictions between some states' policies and international protection obligations [570][585]. UNHCR reported 5.4 million forcibly displaced people and an estimated 3.8 million internally displaced within Myanmar by end-May 2026 [568][566]. Human Rights Watch urged governments—notably Japan—to keep development aid suspended and to tighten targeted sanctions against the junta [588]. UN agencies and humanitarian coordination mechanisms remain engaged but face severe access constraints that limit implementation of international response frameworks and delivery of assistance across large parts of the country [568][570].

Limitations of Current Policies

The March–June 2026 fuel crisis exposed significant policy and funding fragilities: the World Bank and the Myanmar GiHA Working Group reported sharp fuel price and inflation spikes—with gasoline roughly doubling, diesel nearly tripling, and inflation reaching approximately 24.6% in April—while 56% of surveyed actors reported women losing jobs or being forced to quit, and women-led organizations face rising operating costs requiring flexible, predictable funding [564][567]. Accountability and community feedback mechanisms have been scaled back since 2025 and remain uneven in Myanmar, weakening AAP and PSEA implementation, as well as the closure of feedback loops with affected communities [590]. At the international policy level, there is no coherent framework for engaging de facto authorities, creating a policy vacuum that complicates planning for humanitarian access, reconstruction, and voluntary refugee return [565]. Partners have cut programmes due to a combination of access, funding, and operational limitations, while the absence of durable legal solutions—including suspended refugee registration and widespread border denials—leaves displaced populations without adequate legal protection or pathways to durable solutions [566][570][575][582].

Food Security and Livelihoods

Access to Food and Market Functionality

Local markets and supply chains have largely recovered following the March 2025 earthquake, with major corridors such as Yangon–Mandalay operational and the majority of townships reporting moderate to full market functionality, enabling resumed deliveries of food, household items and construction materials and supporting continued use of cash-based assistance approaches [615]. The reopening of the Mandalay–Myitkyina domestic route and the expected reopening of the Myawaddy–Mae Sot Friendship Bridge No.2 are projected to improve domestic and cross-border agricultural trade and ease transport constraints in the coming months [621]. Key price and cost indicators in May 2026 include:

- Rice prices rose modestly by 2.2% year-on-year and 1.6% month-on-month [617][621].
- Maize prices continued to increase, driven by strong export demand ahead of Thailand's duty-free window [617][621].
- Fuel prices remain substantially elevated: diesel was about 73% higher and petrol about 83% higher than pre-conflict levels, with diesel up roughly 108% and petrol up about 66% versus May 2025 [621].
- Animal-source food prices, including fish, mutton and beef, remained substantially higher year-on-year [617].

Elevated fuel and fertilizer costs have eroded fertilizer profitability and led some farmers to reduce ploughings or cultivate smaller areas, threatening monsoon-season production and eroding household purchasing power, while the March 2026 fuel crisis has deepened economic pressures and produced pronounced gendered impacts on livelihoods and access to services [617][625]. Conflict and control of logistics continue to disrupt market functionality in specific areas: junta actors have imposed tight restrictions on logistics into Kyaukphyu since late 2023, limiting imports to a few monthly shipments received by junta-connected traders who resell goods at inflated prices, and residents report that a family of four needs around 30,000 MMK per day to prepare basic meals in the town [633]. Fuel shortages and high transport costs have constrained movement and trade in conflict-affected townships such as Waw Ray (Doooplaya), where motorcycle petrol prices rose from about 7,000–8,000 MMK/litre to 15,000–20,000 MMK/litre between January–March 2026 and staple commodity prices also increased [623][613]. Humanitarian actors are conducting market assessments and supplier mapping (with a draft list of reliable suppliers expected in July 2026) and continue market monitoring to inform response options, including cash-based assistance where markets are functional [629][615].

Coping Mechanisms

Households in Myanmar are adopting negative coping strategies as rising fuel and transport costs, market disruptions and conflict constrain livelihoods and purchasing power [621][615]. The fuel crisis has had pronounced gendered impacts: 56% of respondents reported women losing jobs or being forced to quit because of rising travel costs, and 46% reported electricity/connectivity disruptions limiting women's access to mobile money and cash transfers; 44% said higher transport costs are affecting girls' school attendance [609]. Fuel shortages increased household stress (87% reported), pushed women and girls to travel further to collect cooking gas (59%), and increased women's dependence on male family members (70%) [609]. As incomes fall, 62% of respondents reported increased borrowing; more severe negative coping strategies reported included labour exploitation (33%), forced marriage (18%), survival sex for money (16%), and sex in exchange for food or fuel (8%) [609].

Conflict-related market controls and monopoly of food supplies have reduced affordable access to staples in some areas, with growing reliance on begging to meet basic food needs reported in Kyaukphyu [633]. Economic shocks from the 2025 earthquake and its aftermath also depressed livelihoods, with about 15% of households near the epicentre reporting loss of income or employment, slowing recovery and increasing reliance on coping strategies [615].

Livelihood Disruption

Myanmar's fuel crisis, which began in March 2026, has sharply increased fuel prices and operating costs—by end-May 2026 diesel was about 73% higher than pre-conflict levels and up 108% year-on-year, while petrol rose 66% year-on-year—eroding transport affordability for households and businesses [621][625]. The crisis is also gendered, eroding women's livelihoods, increasing unpaid care burdens and dependence on male household members, and constraining the capacity of women-led organisations to engage in crisis mitigation and service delivery [625]. High fuel and fertilizer costs are reducing agricultural profitability and prompting some farmers to cultivate smaller areas or reduce ploughing ahead of the monsoon, threatening production and farm incomes [617].

Plantation-dependent communities in Doooplaya (Waw Ray/Win Yay) reported falling returns for local produce alongside rising input and petrol costs between January–March 2026, including large declines in prices received for betelnut, reducing household incomes and market opportunities [613]. Movement restrictions, intensified militarisation and Burma Army checkpoints have constrained access to jobs, markets and services, caused displacement and forced villagers to avoid main roads, further limiting livelihood activities [613]. Localised market control and conflict-related pressures have driven sharp price increases and job losses in some areas; junta authorities' control of food flows in Kyaukphyu has pushed prices up and increased acute livelihood hardship among low-income families [633].

Recovery from the 2025 earthquake remains incomplete: by late 2025 only about 45% of affected firms had returned to pre-earthquake activity levels and around 15% of households near the epicentre reported loss of income or employment, prolonging economic vulnerability [615]. Humanitarian actors have warned of additional hazards—including flood risk during the monsoon and ENSO-related shocks—that could further disrupt agriculture, markets and household incomes in the coming months [634][629].

Impact on Agricultural Activities and Production

Fuel and fertilizer costs have risen sharply: diesel and petrol prices in May 2026 were reported substantially above pre-conflict and year-earlier levels, and the reference price for a bag of urea was 157,000 MMK in May before being reduced to 140,000 MMK in June, compared with 94,000 MMK in the previous monsoon season (roughly 67% and 49% higher than that prior benchmark) [621]. Higher input and transport costs have eroded fertilizer profitability and prompted some farmers to cultivate smaller areas or reduce the number of plowings, risking lower monsoon-season production [621][617]. In conflict-affected townships such as Waw Ray (Doplaya District), high petrol prices and fuel shortages in January–March 2026 impaired travel and disrupted plantation farming (rubber, lime, mango), aggravating livelihood challenges [613].

Late June 2026 flood warnings were issued for parts of the Ayeyarwady Delta, Bago, the Sittaung River Basin and Yangon, and the Department of Fisheries advised fish farmers to take preventive measures against pond flooding and fish losses [621]. A new El Niño phase was expected in June 2026, increasing drought risk across much of Southeast Asia and raising concern for monsoon-dependent planting and water availability in Myanmar [621][629]. One-year post-earthquake assessments note that, although transport corridors and markets have largely reopened, rising fuel and transport costs continue to slow livelihood recovery and increase the cost of agricultural inputs and market access [615].

Food and Livelihood Needs and Current Response

Humanitarian food and livelihood support in Myanmar is constrained by widespread access restrictions and economic shocks, including rising fuel and transport costs that are undermining recovery and market access [629][615]. Key figures as of early June 2026:

- An estimated 3.8 million people remain internally displaced within Myanmar, with UNHCR reporting 5.4 million people forcibly displaced within the Myanmar situation as of end-May 2026 [629][640].
- Nearly half of townships (47%) face high humanitarian access constraints, with only 8% considered relatively accessible, limiting delivery of assistance across large areas [629].
- UNHCR and partners delivered core relief items to over 74,000 people, shelter support to approximately 3,000 people (559 families), and multi-purpose assistance to approximately 3,300 people (1,146 families) in Myanmar during the April–May 2026 reporting period [640].

Humanitarian modalities in use include distribution of core relief items, shelter support and multi-purpose cash or cash-based approaches where markets have resumed [640][615].

Critical gaps include areas with active conflict or recent air strikes where displaced households lack external support—for example, Mu Traw/Lu Thaw displaced communities reported no organisational assistance as of May 2026—as well as local monopolisation of food supplies driving sharp price increases in locations such as Kyaukphyu, and disrupted access to agricultural inputs and markets [661][633][615]. Recovery and livelihood restoration remain partial: the World Bank reported around 45% of affected firms had returned to pre-earthquake activity by late 2025 and only about half of affected households had begun repairs [615]. Climate and seasonal risks (monsoon flood warnings and a developing El Niño) and elevated fuel and fertiliser costs threaten agricultural production and household purchasing power in the coming months, increasing the need for livelihood-support interventions [621][612][615].

UNHCR continues to lead and strengthen inter-agency coordination for refugee- and displacement-related responses, including through the Rohingya Coordination Team introduced in January 2026, and health and area-based coordination groups are preparing the 2027 Humanitarian Needs and Response Plan with an emphasis on greater involvement of local partners [640][629]. Local and national actors have assumed increased operational responsibility, highlighting the need to prioritise funding, cash-based assistance, agricultural input provision, and support to local NGOs for sustained livelihood recovery; gender-sensitive targeting—including cash transfers for women-headed households—is also recommended given rising fuel-related impacts on women's livelihoods [620][609].

Education

Learning Environment and Facility Conditions

In Waw Ray (Win Yay) Township, Doplaya District (January–March 2026), some schools were operated by the Burma regime while others rejected its authority; schools near Burma Army camps were closed and students studied in villagers' houses, though they completed the 2025–2026 school year [663][666]. The military junta's crackdown has targeted educational institutions more broadly, including university closures, imprisonment of scholars, and displacement of students [701]. In Magway region, a public school and a monastery have been occupied by the Myanmar military since early 2025, restricting local education access [674]. The 28 March 2025 earthquake damaged or destroyed 2,596 schools across affected areas, creating significant ongoing infrastructure and rehabilitation needs [667]. Burma Army air strikes in April 2026 destroyed at least one middle school and a school hall in Lu Thaw Township (Mu Traw/Hpapun District), killing and injuring civilians and prompting further displacement that interrupted schooling [690].

Access to Education and Barriers

High petrol prices and frequent fuel shortages since March 2026 increased transport costs, making motorcycle rental unaffordable for some families and creating practical travel barriers to accessing schools [666]. Villagers also faced travel restrictions to avoid Burma Army checkpoints, further impeding movement to schools and contributing to displacement that disrupted schooling [666][663]. Rising transport costs were particularly noted to affect girls' school attendance or contribute to dropout, with 44% of respondents in a June 2026 GiHA survey citing this impact [676]. By end-May/early June 2026, an estimated 3.8 million people were internally displaced in Myanmar, a scale of displacement that significantly exacerbates barriers to enrolment and regular school attendance [668][670].

Education Needs and Current Response

Priority education-sector needs in the current response context include rehabilitation of the 2,596 schools damaged or destroyed by the 28 March 2025 earthquake, heightened psychosocial support for children, and the establishment of safe learning environments in conflict-affected areas [667][664]. In conflict-affected townships, some formal schools have closed or operate under conflicting authorities, with students in places like Waw Ray Township continuing studies in villagers' houses [663]. Escalating displacement and severely restricted humanitarian access are straining delivery of education-related services across affected areas [668][670]. UNHCR and partners have identified refugee education and protection as a strategic priority, promoting safe-space and community-school engagement approaches for Rohingya children through regional workshops and advocating for their inclusion in national education systems [665][664].

Health

Availability and Access to Healthcare Services

Humanitarian monitoring indicates widespread attacks and obstructions to health care in Myanmar, with Insecurity Insight and Health Cluster data recording roughly 1,940 incidents against health care since February 2021 through mid-2026, including 175 health workers killed, approximately 931–932 arrested, and health facilities damaged on over 500 occasions [705][709]. Between 10–23 June 2026, reported incidents included seizure of a makeshift clinic and base camp (11 June), confiscation of an X-ray machine (14 June), long-term occupation of a sub-rural health centre, arrest and reported torture of a CDM-affiliated health worker (19 June), and damage to an ambulance plus injuries from an airstrike (23 June) [707]. Airstrikes and combat incidents in 2026 have directly destroyed or damaged clinics and ambulances — for example, April 2026 airstrikes in Lu Thaw Township destroyed a clinic and other community infrastructure, triggering displacement and reduced access to care [724].

The Myanmar Health Cluster has warned that intensifying conflict and restrictions on NGO registration are severely impeding access for health workers, patients and supplies, while the monsoon season is increasing risks of AWD, malaria and dengue, and medicine supply chains are deteriorating [704]. Fuel shortages and price increases since March 2026 have further narrowed access to time-sensitive care, with assessments reporting medicine stockouts, reduced clinic hours, interruptions to maternal and reproductive care, cuts to mobile and outreach services, and delays in GBV and pregnancy referrals [717][716]. Local reporting from Dooplaya (Waw Ray) District for January–March 2026 found a KDHW clinic with insufficient medicines and documented that sharp petrol price rises and fuel shortages impeded travel for surgical and hospital care, pushing some patients to seek treatment across the border in Thailand and leaving poorer patients unable to access treatment [703][711]. Sexual and reproductive health services continue to be provided via mobile clinics, static facilities and community-based services, with UNFPA and SRH partners supporting emergency referrals, maternity waiting homes and availability of selected Inter-Agency Reproductive Health kits [704].

Disease Outbreaks

As of late June 2026, localized Acute Watery Diarrhoea (AWD) outbreaks occurred in temporary settlements in Kachin and Rakhine and were rapidly contained through coordinated Health–WASH responses, with WHO's global cholera update listing Myanmar among countries reporting AWD cases [704][705][706]. The Health Cluster tested an AWD Prioritization Tool during a preparedness workshop in Myitkyina on 4–5 June 2026, while UNICEF planned further AWD preparedness workshops for Rakhine, Northwest, Southeast, Shan and Karenni; partners stressed data anonymization, non-financial technical support, and inclusion of security and duty-of-care measures for field staff [704].

Monsoon conditions are driving increased risk across multiple diseases, with a reported surge in malaria from Chin, Kachin, Karenni, Sagaing and Tanintharyi, and rising dengue cases in Rakhine and Karenni, while limited diagnostics are delaying detection of outbreak-prone diseases [705][704]. Measles remains a cross-border threat — the outbreak in neighbouring Bangladesh is decreasing but the risk for Rakhine and Chin remains high due to many children remaining unvaccinated, prompting continued measles preparedness efforts [705].

Rising displacement, estimated at approximately 3.8 million IDPs as of 8 June 2026, and severe access constraints are intensifying overcrowding and hampering outbreak response and routine services [704][708][705]. Health Cluster response actions include WHO SSA reporting awareness sessions, market assessments, and a Phase II health facility survey planned for July to inform preparedness and response [704][708][705].

Health System Challenges

Myanmar's health system faces severe and compounding structural challenges. Between 1 February 2021 and June 2026, there were at least 1,939–1,943 attacks on health care, resulting in 175 health worker deaths, over 931 arrests, and damage to health facilities on at least 506–509 occasions [705][709]. Between 1 and 30 June 2026, Insecurity Insight reported 13 new incidents affecting health care, while WHO's Surveillance System for Attacks on Health Care recorded one verified incident; the Health Cluster has planned awareness sessions to improve incident reporting by partners [705]. OHCHR reported over 700 civilians killed by military attacks between August 2025 and 31 January 2026 and highlighted that reductions in international assistance are contributing to deterioration of emergency healthcare provision, particularly medicine supply chains and health facilities [704].

The 28 March 2025 earthquake damaged or destroyed 713 health facilities, and reconstruction and recovery remain slowed by rising fuel and transport costs and broader economic pressures [710]. The nationwide fuel crisis since March 2026 has driven medicine stockouts, reduced clinic hours, interruptions to maternal and reproductive care, and cuts to mobile clinics and outreach, with a survey reporting 68% of respondents experiencing delays in referrals for GBV survivors and pregnant women and 56% reporting cuts to mobile and outreach services [717].

Intensifying conflict, barriers to NGO registration by de facto authorities, and administrative and security constraints — including risks from sharing operational location data — are impeding partner operations, forcing some to cease activities and complicating supply and staffing arrangements [704]. WHO and the Health Cluster have flagged shortages of skilled health workers and essential non-communicable disease (NCD) medicines and supplies, and plan additional clinical trainings and prepositioning of NCD supplies in strategic locations [704]. Reduced donor interest and funding shortfalls are further undermining service continuity — particularly for NCD interventions — and many local partners remain ineligible for direct contracting by WHO due to registration, banking and reporting constraints, limiting localization and prepositioning capacity [704].

Mental Health and Psychosocial Support (MHPSS)

Protection Cluster-led assessments in June 2026 identified growing psychosocial support needs and significant gaps in referral services across Myanmar, with particular shortages reported in Kachin State [720]. UNHCR and partners delivered community-based protection activities that included MHPSS awareness sessions, though coverage remains constrained by access and operational limits [720].

Severe access constraints — with 47% of 251 townships classified as high access constraints and the most difficult-to-reach areas concentrated in Sagaing and Rakhine — are impeding delivery of humanitarian services including MHPSS [704]. The March–June 2026 fuel crisis has further weakened service delivery and referral pathways for psychosocial support, with 68% of respondents reporting delays in referrals for GBV survivors and pregnant women and 56% reporting cuts to mobile clinics, outreach, and community-based services that provide psychosocial support [717].

Health partners have recommended the systematic inclusion of psychosocial support and duty-of-care measures — including evacuation plans, safety reserves, and staff psychosocial support — within health and emergency programming to protect both affected communities and frontline staff [704].

Health Needs and Current Response

The most urgent healthcare needs include emergency trauma care and continuity of maternal, child and sexual and reproductive health services; restoration of medicine supply chains and health facility functionality; management of communicable disease outbreaks (malaria, dengue, AWD, measles); and continuity of care for chronic NCDs amid rising displacement and severe access constraints [704][705]. Internally displaced people rose to an estimated 3.8 million as of 8 June 2026, while OCHA reported that 47% of 251 townships face high access constraints and only 8% are relatively accessible, concentrating over 1 million people in need in Sagaing and Rakhine and severely limiting health service reach [704].

Key health system gaps include medicine supply interruptions, reduced clinic hours, shortages of qualified staff as partners cut programmes and personnel, under-resourced facilities, and constrained medical logistics due to fuel shortages and access blockades [704][717][705]. Sexual and reproductive health services continue to be delivered through mobile clinics, static facilities and community-based services, with UNFPA supporting capacity-building in June 2026 and selected Inter-Agency RH kits available, though maternal referrals and access have been undermined by fuel shortages, medicine stockouts and cuts to outreach services [704][717].

On the response side, WHO ran NCD-in-emergencies workshops in May–June 2026, and the Health and WASH Clusters tested an AWD Prioritization Tool in Myitkyina on 4–5 June 2026 to better target preparedness and response [704][705]. Coordination is active but strained: the Health Cluster is leading multisectoral contingency planning, sub-national AWD and measles preparedness with UNICEF, WASH and Nutrition partners, and is promoting incident reporting into WHO's Surveillance System for Attacks on Health Care to improve monitoring [704][705].

Nutrition

Availability and Access to Nutrition Services

The Health Cluster reports severely restricted access impeding partners' ability to deliver services, with internally displaced people reaching 3.8 million as of 8 June 2026 and 47% of townships facing high access constraints, limiting both outreach and facility-based nutrition service coverage [740]. Open-source monitoring has documented at least 1,943 incidents of violence against or obstruction of health care since 2021, with health workers killed and facilities damaged on hundreds of occasions, significantly undermining nutrition and related health services [757]. Fuel shortages and sharply higher transport costs have further constrained patient and staff mobility and access to care — for example, in Waw Ray township motorcycle fuel rose to approximately 15,000–20,000 kyats per litre — with the March–May 2026 fuel crisis reducing mobile clinics, outreach and community-based services, and delaying referrals for pregnant women and GBV survivors [752][754][746]. Shortages of diagnostics and administrative barriers to NGO registration are delaying outbreak detection and response, and have forced some partners to cease activities in affected areas [740].

To address supply and coverage gaps, market assessments and visits to medical suppliers are underway, with a first draft list of reliable suppliers expected in July; Phase II of a Health Facility Survey (Kobo questionnaire) is also being finalised to better map service capacity [740][742]. A lack of consolidated, up-to-date facility-level nutrition service metrics — including numbers of nutrition service points, workforce, and therapeutic food stocks — is implied by these ongoing assessments, the results of which are expected to inform coverage and supply gaps in the coming weeks [740]. UNHCR will phase out support for nutrition programme implementation on Bhasan Char effective 1 July 2026, with UNICEF having expressed interest in supporting continuation in coordination with WFP [743]. Health, WASH and Nutrition Clusters are planning AWD preparedness workshops across Rakhine, Northwest, Southeast, Shan and Karenni using an AWD Prioritization Tool supported by UNICEF, and joint measles preparedness between Health and Nutrition Clusters is ongoing in Rakhine and Chin due to large cohorts of unvaccinated children [740][742].

AWD outbreaks in Kachin and Rakhine were rapidly responded to through coordinated WASH–health actions, indicating some functioning inter-cluster AWD–nutrition response capacity at the subnational level [742].

Nutrition Needs and Current Response

Macro-economic shocks — including sharp increases in fuel and fertilizer prices and elevated transport costs — are eroding agricultural production prospects and keeping staple and animal-sourced food prices above last year's levels, increasing household food security and nutrition risks ahead of the monsoon season [751][745][758]. These pressures compound the broader humanitarian crisis, in which an estimated 3.8 million people remained internally displaced in Myanmar by end-May 2026, with severe access constraints impeding humanitarian service delivery [739][740].

Acute threats to child nutrition include AWD outbreaks in Kachin and Rakhine, as well as a sustained measles risk in Rakhine and Chin. In response, UNICEF is organising sub-national AWD preparedness workshops for Health-WASH-Nutrition partners using an AWD Prioritization Tool, and capacity-building for measles diagnosis and treatment of health workers is ongoing [742][740]. Operational actions also include joint AWD action planning and ongoing market and supplier assessments, with a first draft list of reliable medical suppliers expected in July to support resumed health-nutrition supply chains [740][742].

WASH

Availability of Water Sources

The estimated increase in internally displaced people to about 3.8 million as of 8 June 2026 is placing additional pressure on WASH service delivery in access-restricted areas [789]. Flood warnings were issued for parts of the Ayeyarwady Delta, Bago, the Sittaung River Basin and Yangon because of heavy rain, elevated river flows and high tides, while a developing El Niño raises medium-term drought risk — creating compound flood/drought threats to water availability [782][806]. Sharp fuel price rises and nationwide fuel scarcity since March 2026 are disrupting fuel-dependent water pumping and irrigation, prompting some farmers to reduce irrigation/ploughing and reducing reliability of water supplies [782]. One year after the March 2025 earthquake, major transport corridors and electricity supply have largely returned — supporting recovery of basic services and markets — but many households remain with incomplete repairs, which may limit restoration of community water systems in some areas [781].

Access to Sanitation Facilities and Hygiene Practices

During the monsoon season, localized AWD outbreaks occurred in temporary settlements in Kachin and Rakhine, and skin infections were reported mainly from IDP camps in Kachin, Karenni and Rakhine [789][783]. These outbreaks were rapidly contained through effective coordination between WASH and health partners [789][783]. Response and preparedness are constrained by intensifying conflict, restrictions on NGO registration that have forced some partners to cease activities, military blockades, and shortages of diagnostics that delay detection of outbreak-prone diseases [789][783]. Operational delivery of WASH items is further hindered because large distributions can be unsafe — as they may be targeted by airstrikes — and beneficiaries often resist detailed registration over fears of surveillance, complicating hygiene supply distributions [797].

Waste Management and Vector-Borne Disease Risks

WHO's global cholera update noted that Afghanistan and Myanmar reported acute watery diarrhoea (AWD) cases as of late June 2026 [800]. The monsoon season is increasing risks for AWD as well as malaria and dengue, with gaps in diagnostics delaying detection of outbreak-prone diseases [789]. Independent reporting and environmental monitoring have documented toxic waste and heavy-metal contamination from unregulated rare-earth and other mining operations in Shan State, including allegations of contamination at levels up to nine times danger thresholds, highlighting river pollution risks from mining waste disposal [796]. A hazardous mine-waste heap collapse in Hpakant in late June 2026 killed five scavengers and left about 15 missing, illustrating acute physical hazards from unstable mining waste piles and the broader lack of safe mine-waste management [813][814]. WHO and partners also flagged operational constraints — including difficulties for local organisations to meet registration and reporting requirements and concerns about sharing precise location data that could pose security risks — which undermine timely detection, data sharing and response to WASH- and vector-related threats [789].

Main WASH Needs and Humanitarian Response

The WASH Cluster tested an AWD Prioritization Tool at a preparedness workshop in Myitkyina on 4–5 June 2026, and UNICEF will support roll-out of sub-national AWD preparedness workshops using the tool in Rakhine, Northwest, Southeast, Shan and Karenni [789][783]. Joint AWD action planning at sub-national level is ongoing as part of monsoon preparedness, led by the WASH, Health and Nutrition clusters to prioritize high-risk townships [783]. A market assessment with a draft list of reliable suppliers is expected in July 2026 to address WASH and medical supply shortfalls [789]. Scaling the WASH response remains constrained by intensifying conflict, access restrictions, and limited diagnostics that hinder outbreak detection and service delivery [783][789].

Shelter and Non-Food Items (NFI)

Damage to Housing and Shelter Needs

The 28 March 2025 Mw7.7 earthquake caused widespread housing and infrastructure damage across central Myanmar, with more than 11,995 homes, 2,596 schools, and 713 health facilities partially damaged or destroyed and over 200,000 people displaced [818]. One year on, many households have repaired or rebuilt damaged homes, but a substantial number remain in transitional shelters or have incomplete repairs due to limited financial capacity and rising reconstruction costs [818]. Conflict-related strikes have further compounded housing destruction: April 2026 air strikes in Za--- village (Mu Traw/Lu Thaw) burned 20 houses, damaged almost all houses in the village, and destroyed a clinic, a middle school, and church buildings, forcing villagers to flee to forests or across the border [838].

In Doooplaya (Waw Ray/Win Yay) township (January–March 2026), reports describe houses burned, Burma Army troops billeting in homes, and consequent displacement, further reducing local shelter availability [829]. Internally displaced people rose to an estimated 3.8 million as of 8 June 2026, severely constraining shelter availability, while 47% of townships face high access constraints that impede shelter programming [826]. Immediate shelter needs include emergency shelter materials (tarpaulins), essential household items, and temporary shelter solutions for families living in makeshift conditions or informal sites [838]. Key rebuilding challenges are limited household financial capacity, rising construction and fuel/transport costs, and restricted humanitarian access due to security and administrative barriers, all of which slow durable housing recovery and return [818][826].

Living Conditions in Camps or Settlements

Between 1 January and 31 May 2026, 2,260 new arrivals were biometrically identified through a joint exercise, bringing the total identified since 2025 to 152,029 people (39,881 families), while 1,893 individuals were reportedly denied entry to Bangladesh in the same period (14,380 denied since 2024) [821][824][819]. Shelter construction of double-storied temporary safer shelters in Block E of Camp 4-Extension resumed on 26 May 2026; 210 of 300 shelters are complete, the remaining 90 are more than 80% complete, and the structures use approved local materials (bamboo, steel poles, plastic tarps) and are designed to be quickly dismantled rather than serve as permanent housing [819]. Water and energy interventions include the Teknaf Water Project to address chronic shortages and progressive solarization of camp water systems, with the Camp 26 solar-powered system fully operational and three substations completed as of May 2026 [821]. UNHCR and IOM continue LPG provision to roughly 230,000 refugee households, with suppliers meeting distribution requirements for April–May 2026 and funding projected to cover needs through end-September at current rates [824]. Fuel shortages and related service disruptions have elevated protection risks in displacement and host-community settings, including reduced public lighting and delayed GBV and maternal referrals, increasing insecurity for women, children, older persons, and persons with disabilities [828]. Health and hygiene risks persist across displacement sites: Acute Watery Diarrhoea (AWD) and other water-related outbreaks in temporary settlements in Kachin and Rakhine have been rapidly contained through coordinated Health–WASH responses, and AWD preparedness tools and workshops were conducted in early June 2026 to prioritise high-risk areas [826][822]. Attacks on health care have been widespread and sustained, with open-source monitoring documenting roughly 1,900+ incidents of violence or obstruction against health care since 2021, health facilities damaged on hundreds of occasions, and health workers killed or arrested—conditions that undermine service provision in camps and informal settlements [827][822][834]. Nearly half of townships in Myanmar face high access constraints, limiting delivery of services and emergency healthcare to displacement sites [826][820].

NFI and Shelter Needs and Current Response

UNHCR and humanitarian partners delivered core relief items to over 74,000 people in Myanmar, with approximately 3,000 people (559 families) receiving targeted shelter support and around 3,300 people (1,146 families) receiving multi-purpose assistance [821]. UNHCR led Protection and Shelter, Land and Site Coordination Cluster activities to coordinate assessments and response planning [821]. A one-year post-earthquake assessment noted that supply chains for essential goods—including household items and construction materials—have largely resumed, supporting cash-based approaches; however, many households remain in transitional shelters or have incomplete repairs and continue to need shelter materials and repair assistance [818]. Access constraints remain a critical bottleneck, with checkpoints, administrative restrictions, and violence against personnel impeding NFI and shelter delivery, particularly in Sagaing and Rakhine where over 1 million people in need are concentrated [826]. Funding gaps pose a further structural challenge: UNHCR has cautioned that the global diversion of funds to the Middle East crisis has strained an already underfunded response in Myanmar, increasing risks to sustained NFI and shelter programming [820].

Protection

Impact on civilians

No data available for this section.

Factors Driving protection risks

Escalating hostilities — including airstrikes, shelling and increased militarisation — are the primary driver of large-scale displacement and civilian harm. The conflict's fragmentation, involving hundreds of armed groups and sustained frontline violence, sustains a climate of impunity and indiscriminate harm [862][856][865][875]. Arbitrary arrests, enforced disappearances, forced recruitment and extortion by armed actors further erode rule of law and compound civilian vulnerability [854][862].

Systematic attacks on health care and the targeting of health personnel have severely degraded protection and referral services. Administrative measures such as restrictions on NGO registration, checkpoint impediments and blockades are limiting humanitarian access and freedom of movement [854][862].

Legal and documentation gaps — including the suspension of regular refugee registration and limited civil documentation in conflict-affected areas — restrict access to justice, social services and lawful status, increasing vulnerability to exploitation and exclusion [873][854].

The March–June 2026 fuel crisis and rising inflation have driven acute economic deprivation, eroded livelihoods (notably for women), increased household debt and pushed households toward harmful coping strategies including labour exploitation, forced marriage and survival sex, thereby raising protection and GBV risks and constraining service continuity [867][876]. Reduced international assistance and the diversion of resources to other crises have forced programme cuts and increased reliance on local protection mechanisms that lack sufficient capacity and funding [856][862].

Psychological and mental health impacts

Internal displacement reaching approximately 3.8 million by early June 2026, combined with over 700 civilians killed between August 2025 and 31 January 2026, has generated widespread trauma and intensified psychosocial needs among affected populations [862][869][854]. Field reports from April–May 2026 document acute psychological effects, including children traumatised and exhibiting abnormal behaviour, widespread anxiety among villagers who fled after airstrikes, pregnant women facing delivery challenges during displacement, and communities reporting no organisational support as of May 2026 [870][880].

The March 2026 fuel crisis has further intensified household stress: surveys of women-led organisations found 87% reporting that fuel shortages increased household stress, 68% reporting delays in GBV and maternal referrals, and 79% noting additional challenges for women staff and frontline workers [867].

Humanitarian actors report growing psychosocial support needs, but reductions in international assistance, NGO registration barriers, checkpoint restrictions and staff cuts have forced partners to curtail MHPSS programmes [862][878]. Protection cluster assessments identify persistent gaps in referral services — particularly in Kachin State — that limit the ability to detect and treat mental health and psychosocial needs at scale [854][862].

Protection Needs and Current Response

Urgent protection needs include psychosocial support, systematic GBV and child-protection case management and referral pathways, improved access to civil documentation and legal assistance, safe shelters and safe spaces, and prioritisation of fuel and transport for protection and referral services [854][863][867]. Accountability and protection coordination systems are under strain — regional AAP/PSEA mechanisms have been scaled back and collective accountability to affected populations remains uneven in conflict-affected, access-constrained settings, weakening feedback, referral and safe-complaint pathways [855][864].

UNHCR serves as Protection Cluster lead, working with 16 national and nine international partners to strengthen localisation and access to hard-to-reach areas. It supports measures to improve access to civil documentation in the South-East and delivers community-based protection, complaints-and-feedback sessions, PSEA messaging, and MHPSS activities [854][862]. Health Cluster actions include AWD preparedness workshops and Surveillance System for Attacks on Health Care (SSA) awareness sessions to improve reporting and preparedness [854][862]. UNHCR also facilitated the release and community-based reunification of 15 people, predominantly children, in May 2026 [854].

Child Protection concerns

Escalating hostilities are exposing children to forced recruitment, arbitrary detention, family separation and restricted movement, with protection assessments noting rising psychosocial needs and gaps in referral services, particularly in Kachin State [854][856]. Recent arrivals include high proportions of unaccompanied or separated children, creating urgent needs for family tracing, reunification and community-based care [854].

Airstrikes and shelling have damaged schools, injured children and prompted closures and interrupted schooling in multiple areas, including Lu Thaw Township in April 2026 and Waw Ray/Dooplaya District between January and March 2026, with families reporting children unable to study due to fear of strikes [870][872]. Monitoring and incident reports from April–May 2026 describe airstrike-driven displacement where families including children fled with minimal belongings and now face acute shortages of food, shelter, healthcare and education access [880][870].

Children and adolescents face heightened risks of trafficking, forced labour and sexual exploitation linked to transnational scam compounds and smuggling routes, with documented cases of forced labour and sexual violence in regional scam centres affecting victims trafficked through or inside Myanmar [879][854]. Economic shocks and the March–June 2026 fuel crisis are driving negative coping strategies that increase protection risks for girls and adolescents, including reported rises in labour exploitation, forced marriage and survival sex [867][868].

Violence against women and girls

The Myanmar Gender in Humanitarian Action (GiHA) Working Group, co-chaired by UN Women and UNFPA, reported in June 2026 that the March 2026 fuel crisis is eroding women's economic security and driving harmful coping behaviours. Key findings include: 56% of respondents reported women losing jobs or being forced to quit due to rising travel costs; 62% reported increased household borrowing; 46% said electricity and connectivity disruptions limited women's access to mobile money and cash transfers; and 44% reported higher transport costs are affecting girls' school attendance or contributing to dropout [867][868]. Reported harmful coping included labour exploitation (33%), forced marriage (18%), survival sex (16%), and sex for food or fuel (8%) [867][868].

GiHA findings also documented narrowing access to time-sensitive services for survivors: 68% reported delays in referrals for GBV survivors and pregnant women, two-thirds reported reduced access to health and sexual and reproductive health services, and 56% reported cuts to mobile clinics, outreach and community-based services [867][868]. Legal-access barriers compound these challenges, with 37% noting disrupted ability of survivors to reach legal aid, courts or police, and 44% reporting reduced operational capacity among legal assistance providers [867].

Reporting on trafficking and scam-compound rescues documents a rise in sexual violence and exploitation affecting women in Myanmar-linked cyber-scam operations, including cases of rape, forced abortion and other severe sexual abuse [879][888]. An April 2026 AAP/PSEA regional survey noted that gender and social norms restrict women's access to formal feedback channels and that many feedback mechanisms are not clearly linked to safe, confidential PSEA referral pathways, undermining survivors' ability to report and receive follow-up [864]. Funding reductions, access constraints and operational pressures have forced organisations to cut programmes and staff, further straining GBV referral pathways and the capacity of women-led organisations responding at community level [854][862].

Vulnerable Groups / Special Needs Groups

Unaccompanied and Separated Children

In May 2026, UNHCR advocacy contributed to the release of 15 people, predominantly children, facilitating family reunification and community-based care [907]. UNHCR and partners are supporting protection-risk assessments and care solutions, while regular refugee registration remains suspended since May 2022 and the biometric family-card exercise does not issue individual refugee documents, which may constrain formal identification and reunification processes [907][918]. Protection Cluster-led assessments in Myanmar noted growing psychosocial support needs and gaps in referral services, notably in Kachin State, indicating limited child-protection case management capacity in some areas [907].

Pregnant and Lactating Women

Between late June and early July 2026, maternal and reproductive health access in Myanmar remained highly constrained by attacks on health care, fuel shortages and large-scale displacement that impeded referrals and facility access [919][929][934]. SRH partners continued delivering essential sexual and reproductive health services through mobile clinics, static facilities and community-based services in June 2026, while UNFPA supported SRH capacity-building and selected Inter-Agency Reproductive Health kits were reported available [909]. Attacks on health care since 2021 have damaged facilities and resulted in killed and detained health workers, further undermining availability of maternal services and safe referral pathways [910][919]. Key operational and protection indicators reported by the Myanmar Gender in Humanitarian Action Working Group and partners include: 68% of surveyed organisations reported delays in referrals for GBV survivors and pregnant women, risking missed emergency contraception, psychosocial support or timely care during labour [929][916][914]; two-thirds reported reduced access to health and sexual and reproductive health services, and 56% reported cuts to mobile clinics, outreach and community-based services that reach those least able to travel [929][916][914]; and 79% reported additional operational challenges for women staff due to fuel shortages, while 87% reported increased household stress from energy rationing affecting care responsibilities and staff availability [929][916][914]. Fuel shortages since March 2026 have weakened facility operations, caused medicine stockouts, reduced clinic hours and interrupted maternal and reproductive care, including emergency referrals, across affected areas [929][915]. Incident reporting from April–June 2026 documents airstrikes and displacement that directly disrupted deliveries and created acute risks for pregnant women during displacement, increasing urgent needs for maternal health and GBV referral services in affected locations [934][933][907]. Humanitarian access constraints — including an estimated 3.8 million internally displaced people as of early June 2026 and OCHA reporting 47% of townships facing high access restrictions — are limiting the reach of maternal health services and referrals in priority areas such as Sagaing and Rakhine [909][908]. UNHCR announced a phasing out of nutrition programme support on Bhasan Char effective 1 July 2026, with UNICEF expressing interest to continue nutrition support in coordination with WFP, a change that may affect maternal and infant nutrition services for that population [911].

Adolescents and Youth

Schools in several areas were closed or shifted to informal home-based teaching because students feared Burma Army airstrikes, disrupting the 2025–2026 school year in parts of Dooplaya (Waw Ray) Township between January and March 2026 [920][915]. Airstrikes in mid-April 2026 in Mu Traw/Lu Thaw Township caused civilian deaths, injuries and destruction, prompting mass flight from villages and leaving children unable to return to school as of May 2026 [933][920]. Escalating hostilities have increased risks of forced recruitment and conscription for young people, a protection concern noted by UNHCR and reported through large-scale conscription measures activated in February 2024 [907][923]. Local reporting from early 2026 documents rising drug use among young people and reduced safe mobility amid militarisation and travel restrictions, increasing protection and livelihood vulnerabilities for adolescents and youth [915][920]. Protection-cluster and health partners identified growing psychosocial support needs and gaps in referral services for adolescents, particularly in Kachin State [907][909]. Communities in Shan and Kayah continue to identify livelihoods as a priority need amid displacement and insecurity, while local reports describe worsening household livelihoods and sharply rising transport and fuel costs that hinder youth access to education and work [907][920][915]. Accountability and community engagement mechanisms — including feedback and participation platforms — remain strained in Myanmar's access-constrained context, limiting youth and community participation in planning and feedback processes [930][917][942].

People with Disabilities

UN and cluster reporting describe a deterioration in emergency health provision in Myanmar, including medicine supply-chain disruptions and damaged health facilities, driven by reductions in international assistance, military blockades and ongoing hostilities, undermining access to specialised medical care and referral services that persons with disabilities depend upon [909]. Severely restricted humanitarian access further constrains delivery of inclusive services: OCHA's May 2026 Humanitarian Access Severity Monitoring found that out of 251 townships, 47% face high access constraints and only 8% are relatively accessible, with the most difficult-to-reach townships concentrated in Sagaing and Rakhine where over one million people are in need [909].

Elderly

Access to health care for older people has been severely disrupted by systematic attacks on health services, with the Myanmar Health Cluster reporting at least 1,939 attacks on health care between 1 February 2021 and 24 May 2026 [910]. Specific incidents in June 2026 — including a military takeover of a makeshift clinic, confiscation of medical equipment, arrest and reported torture of a health worker, and ambulances and homes damaged in airstrikes — have further reduced local care availability [912]. Local primary clinics report medicine shortages and transport barriers, with a Karen Department of Health and Welfare clinic in Dooplaya's Az--- tract having insufficient medicines, while rising fuel costs and frequent fuel shortages impede travel to surgical care or hospitals for those unable to afford transport [915]. Monsoon-related disease pressure — including increased risk of acute watery diarrhoea (AWD), malaria and dengue — and localised AWD outbreaks are placing additional strain on health services during June 2026, compounding access problems for vulnerable groups including older persons [909][910].

Humanitarian actors (UNHCR and partners) delivered core relief items and expanded community-based protection and MHPSS activities in April–May 2026, including distributions reaching tens of thousands and MHPSS/community-protection sessions that aim to reach vulnerable populations, which can include older persons in displacement settings [907]. Calls from regional actors for the release of “elderly and infirm” detainees underscore specific protection concerns for older people in detention contexts [936].

Displaced

By end-May 2026, an estimated 5.4 million people were forcibly displaced in the Myanmar situation, including roughly 3.8 million internally displaced people as reported in early June 2026, alongside 1.6 million refugees and asylum-seekers, of whom 1,197,411 were registered refugees in Bangladesh as of 31 May 2026 [907][911][909]. Escalating hostilities inside Myanmar — including airstrikes, shelling and checkpoint controls — have exposed civilians to forced recruitment, extortion, arbitrary detention, family separation and restricted movement, while intensified access constraints left 47% of townships with high humanitarian access constraints in May 2026 [907][909]. Livelihoods deteriorated as fuel shortages and rising transport costs from March–June 2026 eroded women's economic security: 56% of surveyed respondents reported women losing jobs or being forced to quit because of travel costs, and households adopted harmful coping strategies including increased borrowing (62%), labour exploitation (33%), forced marriage (18%) and survival sex (16%) [929]. Localized militarization and displacement in southeastern areas such as Doooplaya District between January–March 2026 disrupted plantation livelihoods, restricted movement at checkpoints and forced villagers to flee toward farms, forests, border areas and camps [920][915]. In June 2026, around 80 Myanmar migrant workers who resigned from a garment factory near the China–Myanmar border were detained amid allegations of unpaid overtime, exploitative recruitment and use of employer-sponsored permits to discourage resignations [939]. Monsoon-related disease risks and localised AWD outbreaks in Kachin and Rakhine were reported in June 2026, prompting AWD preparedness workshops and use of an AWD prioritisation tool for high-risk townships [909][910]. Restrictions on NGO registration, rising arrests and detentions of aid workers and operational access constraints have forced some partners to cease activities, reducing service delivery and complicating protection and referral pathways for displaced populations [909][942].

Minorities

Open-source monitoring and the Health Cluster recorded a surge of attacks on health care across Myanmar since the 2021 coup — at least 1,939–1,943 incidents by late May/early June 2026, with roughly 175 health workers killed, over 930 arrested and hundreds of facilities damaged — constraining minority communities' access to health services in states including Kachin, Rakhine and Sagaing [919][910]. Local and women-led organisations in Myanmar have assumed greater leadership of humanitarian response but report heightened personal and operational risks; the Myanmar Gender in Humanitarian Action group recommends flexible, predictable funding, duty-of-care measures and direct support to sustain these actors [942][929][916]. International actors and rights groups have urged accountability for junta abuses and warned that continued obstruction of aid and denial of basic rights exacerbate exclusion and legal insecurity for minorities, reinforcing calls for targeted protections and access to justice [926].
