

KEY HIGHLIGHTS

In June 2026, Somalia recorded **146,447 internally displaced individuals** primarily due to conflict and insecurity (68%), followed by drought (28%) and other causes (3%).¹ During the same period, **2,138 individuals were reported to have been exposed to protection risks**, highlighting the continued scale and urgency of protection needs across the country. These findings underscore the critical need to sustain frontline protection monitoring, safe referrals, case management, and targeted assistance to reduce harm, prevent further vulnerability, and ensure timely, life-saving protection services for affected communities.

El Niño Anticipatory Action: FAO's Somalia Water and Land Information Management (SWALIM)² indicate a high likelihood of **El Niño conditions during the October–December (Deyr) 2026 season**, increasing flood risks across parts of Somalia. The Protection Cluster is actively supporting the development of the **Inter-Cluster Anticipatory Action Framework** for drought and floods, ensuring protection priorities—including displacement, protection monitoring, early warning, referrals, and support for vulnerable groups—are integrated into preparedness efforts before anticipated climate shocks escalate into humanitarian crises.

KEY FIGURES

Between 18 June and 22 June 2026, the Protection and Solutions Monitoring Network recorded the displacement of approximately **3,500 households, (around 21,000 individuals)** across Galkayo district and **cross-border displacement of 1,230** due to **severe drought and deteriorating living conditions**. Protection risks affecting the displaced individuals include family separation, psychological and emotional distress, Gender Based Violence, loss of livelihoods and productive assets, and inter-communication tensions due to competition over resources. Despite limited access to affected areas due to

insecurity and resource constraints, the Protection Cluster is engaging partners and local authorities to mobilize response to affected populations.

In June 2026, over 17,000 persons are affected by evictions including in Kahda Garasbaaley and Daynile in Mogadishu, Bosasso, Baidoa and Kismayo, worsening existing humanitarian and protection concerns³. Most of these evictions were driven by agreement expiry, government-led land repossession, ownership dispute, increase in rent, property sale and policy change. Between January and June 2026, a total of **140,071** IDPs were displaced due to evictions, with April and May recording the highest monthly figures while over 50,000 received prevention assistance. Humanitarian leadership and the government including the Commissioner of the Somalia Disaster Management Agency (SODMA) are engaging to address the recurrent evictions including an immediate eviction moratorium for internally displaced persons (IDPs).

CLUSTER CORE FUNCTIONS

CORE FUNCTION 1: SUPPORT SERVICE DELIVERY

Protection Programming Delivers Lifesaving Support to At-Risk Communities

In June 2026, Protection partners assisted **10,806 individuals** with specialized protection services, demonstrating the continued relevance and lifesaving value of dedicated protection programming in Somalia. Through community-based protection, community self-protection initiatives, psychosocial support,

individual protection assistance in cash and in-kind, supported referrals, and protection case management, partners helped affected people reduce exposure to violence, coercion, exploitation, abuse, and deliberate detentions. These interventions addressed immediate protection risks while strengthening community resilience, improving access to essential services, and ensuring timely support for the most vulnerable. This highlights the need for sustained investment in specialized protection services as a core part of the humanitarian response. The following partners provided protection interventions:

Agency for Minority Rights & Development (AMARD)

Target Locations: Baidoa District

- Provided psychological First Aid (PFA), individual counselling, group counselling, and community-based PSS activities to crisis-affected and vulnerable populations. A total of **167 individuals** received support aimed at improving emotional wellbeing, strengthening coping skills, and reducing psychosocial distress. Facilitated survivor-centred GBV case management services to 16 survivors, including psychosocial support, safety planning, and referrals to specialized services. All cases were managed confidentially and in line with GBV guiding principles to ensure safe and timely access to support.

Dignilty First Somalia (DFS)

- DFS implemented community-led flood mitigation works, including embankment reinforcement, drainage clearance, and erosion-control measures in six high-risk locations across Somalia benefiting 500 farming households. The activities were carried out with technical supervision and community participation to protect productive assets and access routes and

³ Evictions tracker <https://somevictions.app.nrc.no/evictions>

mitigate the protection risks associated with floods or El Nino.

- Survivor-Centred GBV Case Management, CMR Referrals and cash protection: DFS provided confidential case management, psychosocial support, safety planning, CMR services and referrals for 50 women and girls at risk of or affected by GBV in Xudur district. Eligible survivors also received cash for protection assistance to address immediate protection risks and support their recovery.
- Provided dignity kits to 425 vulnerable women and girls while mobile outreach teams provided GBV prevention, PSS, referral pathway, and PSEA awareness sessions to 467 in Xudur district. The activity also strengthened access to complaints and feedback mechanisms through community-based information sharing.

Somali Awareness and Social Development Organization (SASDO)

Target Locations: Afgoye, Awdhegle, Qoryoley, Deynile, Kahda and Garasbaley districts

- SASDO provided psychosocial support services, including counselling, psychosocial first aid, and group support sessions, to IDPs, returnees, and vulnerable host community members. A total of **750** individuals received confidential and survivor-centred support to improve their wellbeing and resilience. Strengthened referral pathways by identifying vulnerable individuals and connecting them with specialized protection and support services. Through referrals and case follow-up, **575** individuals gained access to coordinated and survivor-centred assistance while ensuring confidentiality and dignity.
- SASDO provided legal awareness, counselling, and referral services to

individuals facing protection and legal challenges, including civil documentation, housing, land and property (HLP) issues, and family disputes. Individuals requiring legal assistance were referred to appropriate legal aid services for further support.

Community Empowerment & Social Development Organization (CESDO)

- CESDO delivered specialized protection services through four static and mobile Protection Desks in Baidoa rural villages, providing case management, psychosocial support, counselling, information, and referrals to **226 individuals** (65 men, 154 women, 3 boys, and 4 girls) facing diverse protection risks, including persons with disabilities, GBV survivors, elderly persons, minority groups, economically vulnerable individuals and those with health and nutrition risks. These interventions supported individuals in addressing urgent and life-threatening protection risks and needs across Baidoa rural villages.
- With funding from the Somalia Humanitarian Fund (SHF), CESDO provided disability-specific protection services to **426 persons with**

disabilities (213 men, 108 boys, 55 women, and 50 girls) in Baidoa rural villages through the distribution of assistive devices, including wheelchairs, crutches, walking and white canes, hearing aids, and prescription eyeglasses in collaboration with a specialist agency - Al Kheyrad centre - in Baidoa to facilitate the interventions. The intervention enhanced safe mobility, dignity, access to essential services, and reduced protection risks for persons with physical, hearing, and visual impairments.

- On 24 June 2026, the Ministry of Internal Security (MoIS), in collaboration with the Somali Explosive Management Authority (SEMA) and UNMAS, convened Somalia's first High-Level Mine Action Coordination Meeting in Mogadishu.

(APMBC). Participants agreed on key priorities, including enhancing coordination, advancing the SEMA Mine Action Bill, addressing operational challenges, and mobilizing donor support, reaffirming their commitment to a safer, explosive hazard-free Somalia.

- Strengthening responsible Information Sharing for Protection-Sensitive Mine Action Data, iMMAP supported the Somalia Explosive Management Authority (SEMA) in advancing the draft Information and Communications Sharing Policy to strengthen information governance and the safe handling of mine action data. The initiative focuses on establishing clear procedures for sharing sensitive information related to explosive ordnance incidents, casualties, affected locations, and operational activities. By promoting responsible data-sharing practices and stronger safeguards, the activity enhances coordination, evidence-based advocacy, and decision-making among SEMA, the Protection Cluster, and Mine Action partners.

Accelerating Action to End FGM in Somalia:

- UNICEF and UNFPA, together with the Ministry of Family and Human Rights Development, convened key stakeholders to identify practical actions to accelerate the abandonment of FGM in Somalia. Discussions emphasized strengthening community and religious engagement, promoting health sector leadership to prevent FGM medicalization, advancing legal and locally led solutions to protect the rights and wellbeing of girls and supporting health professionals as trusted advocates for prevention and

Figure 2: community consultations at the protection desk in Ismoodnoy rural village, Baidoa @CESDO

The meeting brought together government and humanitarian stakeholders to strengthen national coordination on mine action following Somalia's submission of its Article 5 Extension Request under the Anti-Personnel Mine Ban Convention

abandonment. The initiative was supported by the Government of Denmark.

Strengthening Child Protection Case Management Systems:

- The Child Protection Technical Working Group conducted CPIMS+ and case management training in Puntland and Galmudug, strengthening the capacity of **55 child protection practitioners** to deliver quality, confidential, and timely services for vulnerable children, particularly those affected by drought. The initiative enhanced case management, information management, coordination, and evidence-based responses through the support of SOS Children's Villages, Save the Children, UNICEF, reflecting a shared commitment to strengthening child protection systems and improving outcomes for children across Somalia.

Figure 3 2:CPIMS+ and case management training facilitated in Dhusamareb, Somalia.

CORE FUNCTION 5: CAPACITY BUILDING

GIS Mentorship and Capacity Development for Explosive Ordnance (EO) Risk Analysis

iMMAP completed the GIS Mentorship and Capacity Development Report and provided technical support to strengthen SEMA's GIS and information management capabilities. The mentorship improved skills in mapping explosive ordnance contamination, accident locations, Explosive Ordnance Risk Education (EORE) coverage, and operational gaps. Enhanced GIS capacity supports the identification of high-risk areas, informed prioritisation of mine action interventions, and more evidence-based protection planning for communities affected by explosive ordnance.

iMMAP continued work on SEMA's official website, Power BI dashboards and the Knowledge Management and MEAL Needs Assessment. These products are intended to improve how mine action information is organised, visualised and communicated. The dashboards are expected to support analysis of operational trends, risk patterns and service gaps, while the website can help increase public access to non-sensitive information about SEMA's mandate and mine action priorities. Once sufficiently developed, relevant dashboard outputs may be shared with the Protection Cluster to strengthen joint analysis, advocacy and evidence-based response planning.
