MAIN IDP NEEDS IN ASSESSED LOCATIONS (% OF SETTLEMENTS)

REPORTED NEEDS AND RESPONSE FOR NEW ARRIVALS

The needs of the majority of IDPs in a location refer to the total IDP population who may have arrived at any time, while new arrival needs refer to IDP flows who arrived in a specified period of time (e.g. week 64). Concerning the former, most IDPs needed food (68%), while others needed drinking water (13%), livelihoods (10%) and shelter (7%).

With regard to new arrivals on 30 and 31 May, the main reported needs were shelter (81%), NFIs and food (80% each), sanitation (78%), and health (72%). Response levels during the assessed days were very low compared to reported needs, with assistance reported for nutrition (5%), food and health (4% each), and sanitation and hygiene (2% each).

METHODOLOGY AND CONTEXT

This latest round of Emergency Trends Tracking was initiated in February 2025 to monitor displacement movements during the Jilaal dry season. Since February 2025, DTM teams collected data in 25 districts: Afgooye, Afmadow, Baardheere, Baidoa, Balcad, Belet Weyne, Belet Xaawo, Bu'Aale, Bulo Burto, Cabudwaaq, Dayniile, Dhuusamarreeb, Diinsoor, Doolow, Gaalkacyo, Garoowe, Hodan, Jamaame, Jowhar, Kahda, Kismaayo, Luuq, Qansax Dheere, Waajid and Xudur. Please note that since week 26, only 5 districts were assessed due to limited funding: Baidoa, Dayniile, Diinsoor, Doolow, and Kahda.

ETT is a crisis-based tool that tracks sudden displacement triggered by specific events or emerging crises. The objective of ETT is to help prioritise humanitarian response and to enable partners to deliver rapid assistance. Based on previous shock-induced displacement patterns, the humanitarian community expects that people will continue to move toward urban areas in search of humanitarian services. Consequently, the ETT coverage focuses on the main urban centers and surrounding villages for each assessed district.

The data is collected through Key Informant Interviews (KIIs) at the location level, from Saturday to Wednesday, every week. It includes information on new arrivals, numbers and demographic of IDPs, reasons for displacement, intentions, humanitarian assistance and priority needs among others. To facilitate the joint analysis of the CCCM (Camp Coordination and Camp Management) Cluster's New Arrivals Tracker (NAT) and ETT data, the assistance and needs indicators are identical in both tools for the period of February to May 2025.

LIMITATIONS

The data is collected through Key Informant Interviews (KIIs), consequently the findings should be considered as estimates. Most indicators are also captured for the "majority of the people displaced within a location/because of a specific factor". For example, the place of origin assessed for the new arrivals in one location, is the place of origin of the majority of these new arrivals. The detailed information on all places of origin is not collected and reported. For the reasons for displacement, although the ETT breaks down the new arrivals per main cause, IDPs may be displaced because of a combination of factors. The exercise covers the main urban centers and surrounding areas in each district, consequently none of the districts have a full coverage. The GPS coordinates collected can be approximations and are not always exact locations.

DEFINITIONS

New arrivals: number of individuals who arrive in the settlement a given week. This number doesn't represent new IDPs as new arrivals may be primary but also secondary displacements.

Urban settlements: neighborhoods located in the main administrative town of each district.

Rural settlements: villages outside of cities and towns.

IDP sites: camp and camp-like settings hosting IDPs.

DISCLAIMER

The maps in this dashboard are for illustrative purposes only. Representations and the use of boundaries and geographical names on these maps may include errors and do not imply judgment of the legal status of a territory, nor official recognition or acceptance of these boundaries by IOM.
