

Lebanon

Protection Snapshot: Displacement Post-Escalation

1 million
Displaced

639
Collective shelters

3,613
Killed

11,072
Wounded

The Protection Sector Emergency Snapshot is produced by the Protection Analysis and Monitoring Task Force (PAMTF), drawing on information and secondary data from sector lead agencies in the context of the ongoing escalation of conflict and displacement. It consolidates inputs from Protection, Child Protection, and GBV partners, including dedicated protection monitoring actors. The snapshot reflects field observations, community-level insights and operational updates from frontline teams engaged in protection service delivery and monitoring.

Situation Overview

The humanitarian situation in Lebanon remains fragile despite the ceasefire in place since 17 April 2026. Hostilities continued and increased, predominantly in Nabatiyeh and South governorates, with new displacement orders and sporadic attacks being reported in the West Bekaa.

Over 1.4 million people have been affected by the crisis, including an estimated 390,000 women of reproductive age, among them approximately 16,000 pregnant women. In a matter of weeks, over one million individuals have been displaced amid large-scale destruction, with the crisis increasingly becoming protracted and urban in nature. The majority of displaced populations are living outside the roughly 639 functioning collective shelters, making them harder to reach and limiting access to essential services, while around 32,000 people remain in hard-to-reach areas. The situation is further exacerbated by violations of the ceasefire agreements with repeated targeting of civilian areas resulting in casualties, ongoing displacement, and widespread damage to infrastructure. In addition, the presence of unexploded ordnance (UXO) poses a severe and ongoing threat, increasing the risk of injury and death while hindering safe returns and access to affected locations.¹ The situation in Southern Lebanon, including El Nabatiyeh and south governorate, remains particularly worrisome, with reports that around 45% of the towns and villages being damaged or destroyed²

The protection environment continues to deteriorate amid intensified airstrikes, with rising civilian casualties. Since March 2, the Ministry of Public Health reported about 14,685 casualties among civilians,³ with more than 4,000 casualties post-ceasefire.⁴

As the situation continues, vulnerabilities become more and more compounded by repeated displacement, housing insecurity, lack of resources to cover basic needs and reliance on unsafe

coping mechanisms, such as child labour, child marriage and returns to insecure areas.⁵ Without sustained and scaled-up protection interventions, particularly targeting those IDPs who are outside Collective Shelters (CSs), existing protection risks are expected to exacerbate, with increasing implications for safety, dignity, and access to rights across different communities and groups.

Continuous insecurity in specific parts of the country is limiting access to essential services and humanitarian assistance, while overcrowding, poor shelter conditions, and eviction risks are increasing protection concerns, particularly for women, girls, and female-headed households. Many displaced families face growing challenges to find affordable housing due to rising rents, prolonged displacement, and limited resources, while some have returned to CSs following recent attacks and the destruction of their homes. Negative coping mechanisms, including reduced household spending and child labour, also numbers of those with chronic health conditions, pregnant and breastfeeding women, continue increasing. People with vulnerabilities, including persons with disabilities, face insufficient support, while psychological distress among children and caregivers is driving growing mental health and psychosocial support needs.

Funding shortfalls continue to exacerbate the humanitarian situation in Lebanon. As of 25 May 2026, only 58% of the USD 308 million Flash Appeal had been funded. The substantial funding gap constrains the capacity of humanitarian actors to sustain and scale up the delivery of critical assistance and essential services amid ongoing displacement and deteriorating humanitarian conditions.⁶ Protection Sector funding remains insufficient relative to the identified needs across the sector. During the first three months of the Flash Appeal period, the sector received approximately 45% of required funding, with GBV interventions being the most underfunded at just 19%. This shortfall has led to significantly reduced programmatic achievements and the persistence of high levels of protection needs.

Analysis of Protection Risks and Concerns

1. Housing Insecurity, Evictions and Shelter Exploitation

remain the Dominant Protection Risk: Since the escalation, housing insecurity has consistently emerged as the most frequently reported need and contributing factor to protection risks. While initial concerns focused on displacement and access to emergency shelter, recent snapshots demonstrate a transition toward a prolonged housing crisis characterized by rising rental costs, increasing eviction threats, overcrowding, and exploitation within the private rental market. The near saturation of collective shelters, particularly in Beirut and Mount Lebanon, has forced increasing numbers of displaced households into informal tented settlements, unfinished buildings, garages, and other substandard accommodation. With most displaced populations residing outside formal shelter arrangements, exposure to arbitrary eviction, excessive rent increases, insecure tenure, and exploitative landlord practices continues to increase. This trend is expected to worsen as displacement becomes more protracted, and humanitarian resources remain constrained.

2. Repeated Displacement and Insecurity Continue to Drive Protection Risks:

A recurring trend across all snapshots is the impact of ongoing hostilities, displacement orders, and repeated population movements. Families continue to experience multiple cycles of displacement, often returning to damaged areas only to flee again following renewed insecurity. This pattern has intensified psychological distress, depleted household resources, disrupted livelihoods, and reduced access to services. Repeated displacement is also contributing to increased reliance on unsafe coping mechanisms and exposing affected populations to heightened protection risks, particularly women, children, older persons, and persons with disabilities.

3. Economic Vulnerability Increases Exploitation Risks:

Protection concerns linked to economic hardship have steadily increased throughout the reporting period. Households increasingly report negative coping strategies, including child labour, debt accumulation, reduced consumption, exploitative employment, and unsafe livelihood practices. Post December 2024 arrivals appear to face some of the highest levels of exploitation, including extortion, labour exploitation, degrading

treatment, intimidation, and exposure to unsafe working conditions. Women and adolescent girls appear particularly vulnerable to exploitative labour arrangements due to limited livelihood opportunities, legal barriers, and financial pressures.

4. Documentation and Legal Status Continue to Restrict Access to Rights and Services:

Legal residency and documentation-related barriers remain a persistent protection concern, particularly for displaced Syrians, migrants, and newly displaced populations. Lack of legal status in the country as well as civil documentation continues to hinder access to healthcare, education, humanitarian assistance, freedom of movement, and legal remedies. Most community members, specifically post-December 2024 arrivals from Syria shared their perception that lack of legal status or basic legal documentation increases their risk of arrest or detention at checkpoints. Self-restrictions on movement, along with administrative measures such as curfews, movement restrictions, and documentation requirements, continue to limit access to essential services and livelihood opportunities. These barriers further exacerbate vulnerabilities among already marginalized groups.

5. Unequal access of non-Lebanese displaced Becomes More Pronounced:

A growing trend across recent reporting periods is the increased reporting of unequal access to services among displaced Syrians and other non-Lebanese populations. Key Informants increasingly report barriers to shelter, healthcare, livelihoods, and humanitarian assistance linked to nationality, documentation status, and social tensions. Syrian households are often perceived as having least accommodation options and face greater difficulties accessing assistance and safe housing. These concerns are occurring against a backdrop of increasing pressure on public services, competition over resources, and a maintained negative public perception toward Syrians.

6. Child Protection Risks Continue to Increase:

Child labour has remained a consistently and highly reported concern by communities throughout the reporting period. Reports indicate growing exposure of children to informal labour, highly risky street-based activities, including begging, particularly amongst economically vulnerable households. In addition, repeated displacement, insecurity, school disruption, and deteriorating household economic conditions continue to expose children to heightened psychosocial distress and protection risks. Children in conflict-affected areas also face ongoing exposure to violence, destruction, and traumatic events.

7. Persons with Disabilities and Individuals with Specific Needs Face Persistent Barriers:

Across all snapshots, persons with disabilities, older persons, individuals with chronic health conditions, and children with disabilities have consistently been identified as among the most vulnerable groups. Significant barriers to inclusive information and referrals to relevant services such as healthcare, rehabilitation services, assistive devices, accessible shelter, and humanitarian assistance remain widespread. The increasing reliance on overcrowded and informal shelter arrangements has further exacerbated exclusion risks and reduced access to specialized services.

© UNHCR/Houssam Hariri

8. Mental Health and Psychosocial Distress are Increasing Across Population Groups: Psychological distress has become increasingly prominent throughout the reporting period. Repeated displacement, insecurity, loss of housing, uncertainty regarding the future and protracted displacement situations, financial hardship, and family separation continue to negatively affect mental well-being. Children, caregivers, female-headed households, and individuals exposed to repeated displacement appear particularly affected. Humanitarian actors consistently report growing mental health and psychosocial support needs across affected communities with limited ability to refer high risk cases to relevant services. Women and men also requested dedicated psychosocial support programs such as group sessions or art and recreational sessions for adults to process the difficult circumstances and traumatic incidents witnessed by displaced families.

9. Gender-Based Violence Risks Remain Elevated: While GBV risks have been consistently present throughout the crisis, recent snapshots indicate that overcrowded collective shelters, inadequate privacy, poor lighting, insufficient lockable facilities, and limited safe spaces continue to create conditions that increase risks for women and girls. An initial report based on findings from 180 collective sites (CS) indicates a predominantly unsafe environment, particularly for women and girls. Key concerns include a lack of privacy, around 50% of shelters lack internal locks, while approximately 30% are overcrowded and

without partitioning. WaSH facilities are similarly inadequate, with about 25% lacking locks or sex segregation, further compromising privacy and safety. Access barriers for persons with disabilities remain pervasive, with roughly 45% of sites lacking inclusive access and safe spaces. Inadequate lighting, alongside unassigned and unlit rooms, further heightens protection risks. Additionally, there is a notable absence of PSEA and GBV awareness messaging in about half of the sites, as well as limited availability of visible complaint mechanisms, reported in approximately 40% of locations.

Female-headed households, adolescent girls, and women with disabilities remain among the most vulnerable groups. Funding constraints also threaten the continuity of critical GBV prevention and response services.

10. Social Tensions and Perceptions of Inequitable Assistance are Increasing: In recent reports analyzing the social tensions across communities and regions, a marked increase in social tensions across Lebanon, driven by mass displacement, strained shelter capacity, and mounting pressure on host communities is reported. Protection Monitoring partners highlight that the competition over scarce resources, perceptions of unequal assistance, political grievances, and frustrations linked to prolonged displacement are increasingly contributing to tensions between communities and institutions. Mistrust between host and displaced populations is being amplified through online narratives, including the circulation of voice notes urging residents to verify the identities of individuals in shelters. Public debate has also intensified around government decisions, such as the move to proceed with official Baccalaureate examinations, triggering protests and sustained criticism, particularly in Tripoli. Social polarization is further exacerbated by reactions to regional geopolitical developments and national infrastructure projects, which fuel existing tension and discourse online. Overall, an increasingly active and fragmented information environment is contributing to rising social fragmentation, heightened public mobilization, and growing risks of inter-communal tensions amid persistent insecurity and resource constraints. Negative perceptions toward displaced Syrians and concerns regarding aid distribution have become visible in recent reporting periods and risk undermining social cohesion if left unaddressed.

Population Profile of Displaced

The profile of IDPs remains diverse and marked by pre-existing vulnerabilities. While the ceasefire formally remains in effect, hostilities have continued, including recurring airstrikes in southern Lebanon. During the final week of May, Israeli military operations inside Lebanon intensified, with a significant increase in airstrikes reportedly resulting in the deadliest period since the ceasefire came into effect.

Women and girls continue to be disproportionately affected by the crisis. UNFPA estimates that, in the absence of immediate intervention, approximately 90,000 women and girls may lose access to mobile GBV services, safe spaces, and reproductive health care in the coming month⁷. Non-Lebanese populations,

⁷ UNFPA Situation Report: Lebanon Crisis (1-15 May 2026)

including displaced Syrians and migrants, remain among most severely impacted by the crisis. Prolonged and repeated displacement, deteriorating socioeconomic conditions, and heightened psychosocial stress continue to exacerbate protection risks and vulnerabilities among these populations.⁸ In addition to female-headed households and adolescent girls, GBV safety audit have identified persons with disabilities as facing heightened protection risks and barriers to accessing services.⁹

© UNHCR/Houssam Hariri

In addition, healthcare personnel continue to face heightened risks amid ongoing hostilities. Between 21 and 25 May, nine reported incidents affecting healthcare infrastructure resulted in the deaths of eight healthcare workers and injuries to at least 45 others¹⁰, reaching 131 killed and 392 injured as of 8 June.¹¹

Displacement Dynamics & Movement Patterns

Between 21–24 May, nine attacks on healthcare workers killed eight and injured 45, including around 25 staff wounded near Hiram Hospital in the south on 23 May. The same day, an airstrike destroyed the Civil Defense Center in Nabatieh.¹² Airstrikes across the South and Nabatieh (including Burj al-Shmali, Kawthariyat al-Riz, Habboush, Maarakeh, and Salaa) reportedly killed 31 and injured 40,¹³ while MSF noted hundreds of strikes worsening conditions.¹⁴

At least 35 displacement orders were issued during the reporting period related to 149 localities in South, Nabatieh and Bekaa, triggering population movements, especially in Tyre and its surroundings as well as for the first time also Nabatieh city¹⁵, creating elevated levels of panic¹⁶. According to MSF, the situation is alarming, with large-scale forced displacement orders impacting most of the south of the country.¹⁷

There is a growing pattern of families returning only to flee again, particularly in the southern suburbs of Beirut. As insecurity persists, affected populations continue to move between areas in search of safety, however, these repeated movements are increasingly constrained by financial pressures and worsening living conditions, making it harder for families to sustain displacement. Key informant interviews with displaced Syrians conducted across the country confirmed that displaced people face significant challenges, including overcrowded shelter conditions and limited ability to afford rental accommodation.¹⁸

Most displaced Syrians and Palestine refugees rely on informal hosting with relatives and communities rather than CSs, reducing use of formal facilities but limiting visibility on needs and increasing pressure on already vulnerable hosts. Overcrowding is a growing concern, while CSs like Sibline Training Centre still host significant numbers. New population movements were reported from Tyre, surrounding villages, and gatherings towards Saida and nearby Palestine refugee camps, particularly Ein el-Hilweh and Mieh Mieh. Additional displacement was also reported following evacuation orders affecting areas where Palestinian refugees reside, including Adloun and Sarafand.¹⁹

Access to Shelter

Several areas across Lebanon, including Beirut, ML (Aley, Chouf), the South (Saida), and North, continue to host large numbers of IDPs²⁰ Just around 13% of IDPs are residing in CSs²¹ while the majority is compelled to seek alternative arrangements, including staying with host families, occupying unfinished buildings, setting up informal shelters, or even sleeping in public spaces and open areas. In the first week of June, only 3% of CSs remained with some capacity to accommodate displaced.²²

The shelter crisis is acute across multiple areas. CSs in B/ML are full, prompting authorities to consider tented accommodation. In the South Governorate (Tyre and Saida), shelters are also full, pushing more displaced people into open spaces. Meanwhile, North Lebanon has become the main area receiving new displaced populations, while the Bekaa Governorate continues to absorb arrivals and expand capacity by preparing additional schools as shelters.

The displacement patterns indicate a growing reliance on internal tented settlements, in particular in Akkar and Bekaa, with displaced families showing a preference for areas where humanitarian aid is concentrated, despite substandard living conditions.²³

²³ PAMTF, 08 June 2026.

Eviction continues to be among IDPs' primary concerns. The Beirut Municipality's decision to regulate the presence of IDPs at the Beirut Waterfront has raised concerns related to shelter.²⁴

Restrictions to Freedom of Movement

IDPs have consistently reported an inability to return to their areas of origin due to ongoing security incidents such as airstrikes.²⁵ In addition, eviction risks inside CSs were reported by IDPs in Beirut, pressuring residents to return to Dahyeh and make room for new IDPs to reside in the shelter. The residents are hesitant to return to Dahyeh for a number of reasons, including security concerns and damaged or destroyed homes. Moreover, in Baalbek, the governor issued a directive for CSs to be vacated, citing improved security conditions in areas of origin. This directive was reported despite some IDPs' areas of origin being within active conflict zones. IOM reported that in the Shlifa school in Baalbek, families were evicted despite their homes being damaged and uninhabitable.²⁶

Legal Status, Documentation, and Access to Justice

Lacking civil documentation has reportedly created challenges for IDPs who need to access basic services and rights. This impacts access to education and healthcare, where IDPs with no valid documentation face challenges to enroll their children to school or obtain medical help. Non-Lebanese specifically face issues related to freedom of movement due to absence of legal residency, and many fear passing through checkpoints fearing arrest and deportation. Migrants also continue to face legal vulnerabilities, particularly those who work informally and do not have contracts.²⁷

© UNHCR/Houssam Hariri

Stigmatization and Denial of Services

IDPs have reported that they feel as though they are being treated like beggars. They also indicated that assistance does not always match the needs, for example some IDPs reported receiving too many sanitary pads while they were lacking other more important items²⁸. Access to essential services remains a significant concern particularly for displaced Syrians, persons

with disabilities, and children with specific needs. KIs reported that displaced Syrians often face additional barriers compared to Lebanese IDPs, including stigmatization, restrictions linked to documentation status, fear of movement, and reduced access to shelter, healthcare, livelihoods, and social services. Evidence from recent displacement responses has also highlighted instances where shelter access and assistance were prioritized for Lebanese nationals, leaving some non-Lebanese households with fewer safe accommodation options and increasing reliance on informal coping mechanisms.²⁹

Post December 2024 arrivals³⁰ face heightened and overlapping protection risks. The most frequently cited risks included exploitation and abuse in the workplace, extortion, degrading treatment, intimidation, and exposure to unexploded ordnance. These risks are often compounded by precarious legal status, limited livelihood opportunities, inadequate documentation, and reduced access to information and support services. Field reports from North Lebanon indicate concerning levels of labour exploitation among newly arrived. KIs reported cases of women working excessively long hours under poor conditions for extremely low wages, reflecting increased vulnerability driven by economic hardship, limited income-generating opportunities, weak social support networks, and barriers to accessing safe and dignified livelihoods. The combination of financial insecurity and protection risks continues to expose newly arrived households to harmful coping mechanisms and exploitative practices.

Child Protection Risks and Family Separation

According to KIs, child labor continues to be prevalent in many parts of the country. In B/ML job losses among adults led that more and more children are seen working in mechanic shops, delivery services and in construction across Sawfar, Borj Hammoud and Aalmet. According to KIs in the North, child labor has reportedly become regular. In the Bekaa and Baalbek, KIs indicated that children as young as six can be seen begging in the streets. Conversely in the South, KIs indicated that child labor is not as common as it once was due to the escalating situation and livelihood collapse. However, KIs in the South did indicate that children are constantly being exposed to extreme situations and mental trauma.

GBV Risks

According to observations from 180 CSs, shelters are significantly "protection-compromised", with risks driven by structural and systemic gaps rather than isolated incidents. Key concerns include overcrowding, lack of internal privacy, absence of locks and partitions, insufficient lighting and limited availability of safe spaces. Also, the qualitative data reveals a deeper and more complex protection environment, where GBV risks are shaped not only by physical conditions but also by management practices, social tensions, systemic exclusion, and limited accountability mechanisms.³¹

³⁰ SPEAC monthly Report- April 2026.

³¹ [Lebanon: GBV Safety Audit Report - May 2026](#).

Geographical disparities are noted, with higher levels of risk observed in B/ML, the South, and Baalbek-El Hermel, where shelter congestion and infrastructure constraints are most severe. The report concludes that GBV risks in collective shelters are predictable and cumulative, shaped by environmental conditions, site management practices, and service limitations.³²

Mental Health and Psychosocial Need

IDPs have reported trauma due to damaged and destroyed homes, anxiety about their children's futures, and stress related to eviction. For migrants in particular, distress linked to family separation, chronic hardship and the inability to support dependents was reported.³³

Inter-Communal Tensions

While no major incidents were reported regarding intercommunal tensions, a recent survey data indicate that 80% of Lebanese respondents perceive the continued presence of displaced Syrians in Lebanon as placing significant pressure on public resources.³⁴

Intra-Lebanese tensions remained closely linked to evolving political and security dynamics. These tensions are particularly evident in discussions related to potential future pathways and outcomes.³⁵

Perceptions of unfair distribution of humanitarian aid were also cited as sources of tensions during the last week of May. The main concern was reportedly the inadequate or insufficient amount of aid being provided in comparison to the scale of the displacement-related needs.³⁶

Priority Protection Response Gaps and Recommendations

The below recommendations are aimed at supporting sector members to implement relevant action to enhance the protection advocacy, response and cross-sectoral operations.

Shelter and Overcrowding:

- Enhance analysis of shelter-specific risks and strengthen **protection mainstreaming across collective sites**, in collaboration with Shelter Sector partners.
- Work with Shelter, Cash, and Legal actors to ensure **integrated responses combining financial assistance, legal aid, and safe housing solutions**.
- Present **GBV Safety Audit findings** at the Shelter Sector Working Group and agree on concrete actions to address identified gaps.
- Integrate **protection risk analysis into shelter programming**, including overcrowding, safety, accessibility, and privacy concerns.
- Scale up **shelter support and alternative accommodation options** to reduce overcrowding, particularly in high-displacement areas.

- Expand **cash-for-rent and emergency shelter assistance**, prioritizing households at risk of eviction, repeated displacement, or living in substandard conditions.
- Expand **safe shelter solutions** (e.g., minor rehabilitation of unfinished buildings, upgrading informal settlements) while ensuring minimum protection standards.
- Strengthen **monitoring of shelter conditions**, ensuring adequate lighting, gender-segregated facilities, privacy, and accessibility for persons with disabilities and older persons.
- Increase support for households **outside formal shelter settings** through rental assistance and emergency shelter interventions.

© UNHCR/Houssam Hariri

Protection from Exploitation and Eviction:

- Strengthen **eviction monitoring and rapid response mechanisms**, including legal aid, mediation, and referrals, prioritizing households facing forced evictions or repeated displacement.

³² Ibid.

³³ IOM Protection Observations, 29 May 2026.

³⁴ [Weekly Tensions Pulse 16-22 May 2026](#).

³⁵ [Weekly Tensions Pulse 23 May - June 1 2026](#).

³⁶ Ibid.

- Expand **Housing, Land and Property (HLP) and legal assistance services** to address rental exploitation, unlawful evictions, and housing disputes.
- Advocate with local authorities and shelter managers to ensure that **shelter closures, relocations, or returns are voluntary, safe, and informed**.
- Engage municipalities to **regulate rental practices and prevent exploitation**, including excessive rent increases and discriminatory practices.
- Promote **inclusive, non-discriminatory shelter policies**, ensuring equal access regardless of nationality, legal status, or displacement profile.

Legal Identity and Documentation

- Expand **mobile legal assistance and documentation support**, including replacement and renewal of civil documents and residency processes.
- Prioritize outreach to **non-Lebanese populations, migrants, and newly displaced households**, particularly those facing movement restrictions or exclusion due to documentation issues.
- Strengthen **legal awareness and counselling** to reduce risks of arrest, detention, and exploitation linked to legal status.
- Improve **cross-sector referrals (protection, health, education, shelter)** to address documentation-related barriers to services and assistance.

Inter-Sectoral Coordination:

- Strengthen coordination between **Protection, Shelter, Health, Education, WASH, Cash, and Livelihoods actors** to ensure integrated, holistic responses.
- Enhance **information-sharing, referral pathways, and case management systems**, particularly for persons with disabilities, GBV survivors, at-risk children, and other vulnerable groups.
- Integrate **protection considerations into all sectoral responses**, including shelter, livelihoods, and service delivery.
- Advocate collectively for **increased humanitarian funding** to sustain critical protection and multisectoral services amid escalating needs.
- Promote **conflict-sensitive programming and social cohesion approaches** to address rising tensions and inequalities.

Access to Services:

- Ensure sustained and equitable access to **healthcare, MHPSS, education, child protection, and GBV services**, particularly in displacement-affected and conflict-affected areas.

- Expand **mobile and community-based service delivery models** to overcome access barriers related to insecurity, transportation costs, and movement restrictions.
- Increase targeted support for **women, girls, children, persons with disabilities, older persons, migrants, and refugees** facing compounded barriers.
- Ensure **non-discriminatory, needs-based access to services**, with particular attention to marginalized non-Lebanese populations.
- Integrate **inclusive and accessible approaches**, including reasonable accommodation for persons with disabilities.

Freedom of Movement:

- Advocate against **premature, forced, or unsafe returns**, ensuring that all returns are voluntary, safe, dignified, and informed.
- Monitor and document **movement restrictions, curfews, checkpoint-related risks, and forced returns**, and their protection implications.
- Provide **targeted legal counselling, information services, and community awareness** on rights related to freedom of movement and documentation.
- Advocate for **reduced administrative and informal barriers** that restrict access to services, livelihoods, and humanitarian assistance.

Cross-Cutting Recommendations

- Collaborate with all sectors to ensure **reasonable accommodation measures** in shelter, WASH, health, and education services.
- Integrate **disability-disaggregated data collection** into assessments and monitoring.
- Strengthen **community engagement and accountability systems** to ensure affected populations inform response priorities.
- Enhance **protection monitoring and analysis** to track evolving risks (especially eviction trends, exploitation, and discrimination).
- Ensure **gender-sensitive and survivor-centered approaches** across all interventions.
- Improve **inter-sector coordination**, particularly between Protection, Shelter, Cash, Livelihoods, Health, and Education sectors.
