

OVERVIEW

On 15 June 2026, the United States of America and the Islamic Republic of Iran reached an agreement on a Memorandum of Understanding concerning the cessation of hostilities. The escalation in the Middle East and beyond had triggered a humanitarian crisis affecting multiple regions in an already fragile context, **with significant impact to population mobility**. Since the announcement of the agreement, its impact on mobility dynamics across the region and beyond remains uncertain. The situation continues to be highly fragile, requiring sustained monitoring and operational preparedness.

In the Islamic Republic of Iran, some families have begun returning to their homes amid signs of de-escalation. However, thousands continue to shelter in hotels due to damage to housing and civilian infrastructure. **As of 01 June, approximately 9,000 individuals remain displaced, unable to return to their homes due to the extent of the damage.** Overall, population movements remain localised, temporary, and economically driven, with no signs of mass displacement.

In Lebanon, the humanitarian situation remains fragile, with needs both immense and severe despite the 15 June announcement of a peace deal. Limited and cautious movements of displaced families towards areas of origin have been reported, but the majority of the nearly one million people displaced within Lebanon since 02 March remained in areas of reception due to continued security concerns and ongoing military activities in southern Lebanon.¹ Authorities advised against returns to high-risk locations, and many displaced families are awaiting further assurances before making decisions regarding return. **As of 11 June 2026, 134,807 people remain displaced across 642 crowded collective shelters, with thousands more families sheltering in open spaces.**² Meanwhile, **cross-border flows into the Syrian Arab Republic are continuing, with a total of 441,453 movements recorded as of 15 June 2026,**³ placing additional pressure on an already overstretched humanitarian system.

IOM's Displacement Tracking Matrix (DTM) is on the ground, actively tracking displacement and cross-border mobility while scaling operations in coordination with local authorities and partners to better understand how the crisis is impacting human mobility in the region.

3 Cross-border figures into the Syrian Arab Republic are now sourced from DTM Syria, in coordination with border authorities in the country. Note that due to variations in population coverage, sources and methodology, official sources on movements from Lebanon into the Syrian Arab Republic may differ from previous official sources.

4 Cumulative flow data from the Islamic Republic of Iran to Afghanistan and Pakistan are reported for the period from 01 March to 15 June 2026. Data for movements between the Islamic Republic of Iran and Iraq are available between 01 April and 31 May 2026 for 4 out of 12 BCPs. Lebanon–Syrian Arab Republic figures are reported separately for 02 March to 15 June 2026.

Sources include DTM Syria, in coordination with border authorities, the Iraq Border Point Commission, and Pakistani authorities. Increases and decreases noted below are week to week changes.

5 These PoEs represent a subset of the 44 official land PoEs located along the borders of the Islamic Republic of Iran, the Syrian Arab Republic, and Lebanon.

INTERNAL DISPLACEMENT

AS OF 11 JUNE 2026, THERE WERE **134,807 IDPs** REPORTED IN **642** COLLECTIVE SITES

ESCALATION IN THE MIDDLE EAST AND BEYOND — MOBILITY REPORT

Data collection period: 09 - 15 June 2026 | Publication date: 18 June 2026

Map 1. Mixed population movements surrounding the Islamic Republic of Iran, as of 15 June 2026

* Note: Figures for Turkmenistan are current as of 19 March 2026; for Armenia, they cover the period from 28 February to 10 March 2026; for Azerbaijan, from 28 February to 29 April 2026; for Iraq, from 01 April to 31 May 2026 (for 4 out of 12 BCPs); Cross-border figures into the Syrian Arab Republic are now sourced from DTM Syria, in coordination with border authorities, these figures are as of 15 June 2026. Cross-border figures into Lebanon are from Lebanon Border Control Committee (BCC), in collaboration with the General Directorate of General Security (GSD) and the Land Border Regiments), as of 20 April 2026. Please note that due to variations in population coverage, sources and methodology, official sources on movements between Lebanon and the Syrian Arab Republic may differ. Figures on entries into Türkiye represent average daily arrivals in April 2026 at the three main border crossing points and via rail transport (Source: Republic of Türkiye, Ministry of Culture and Tourism).

IMPACT ON NEIGHBOURING COUNTRIES OF THE ISLAMIC REPUBLIC OF IRAN

The conflict is affecting mobility along shared borders between the Islamic Republic of Iran and its neighbouring countries, driving precautionary movements within and across borders. Since the start of the crisis, **flows from the Islamic Republic of Iran to neighbouring countries have fluctuated over time, varying significantly between countries.** Afghanistan receives the highest number of movements with substantial dips and spikes while Pakistan and Iraq see much smaller and more occasional movements. Overall, cross-border flows remain moderate and variable rather than steadily increasing.

AFGHANISTAN

Between 01 March and 15 June 2026, a total of 467,248 individuals entered Afghanistan (4,367 daily average) from the Islamic Republic of Iran, while 187,746 individuals departed Afghanistan to the Islamic Republic of Iran over the same reporting period (1,755 daily average).⁵ Headcount figures for Islam Qala BCP currently reflect only returnees and Iranian nationals. Data on individuals with valid passports was not collected this week due to temporary access restrictions and should be considered when interpreting the figures.

During the reporting period of 09 - 15 June 2026, cross-border movements at Milak, Islam Qala, and Abu Nasr Farahi BCPs remained stable, with all points operational. Economic pressures, limited legal pathways, and enforcement measures continued to shape movement patterns.

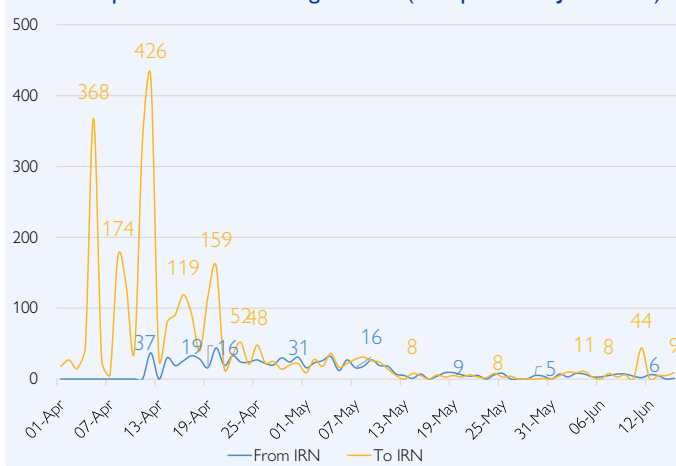

At Milak BCP, forced returns from the Islamic Republic of Iran increased and spontaneous returns continued due to limited jobs and low income. Outflows remained relatively high, mainly among truck drivers and passport holders, with restricted access to new visas.

At Islam Qala BCP, spontaneous returns decreased slightly, while forced returns increased, including cases linked to Iraq via the Islamic Republic of Iran. Returnees reported mistreatment and high transport costs amid intensified enforcement. Inflows of passport holders remained stable, while outflows increased slightly, mainly involving families.

At Abu Nasr Farahi BCP, inflows and outflows remained steady with no disruptions. Limited taxi crossings continued, and one Iranian businessman exited Afghanistan.

Flow Monitoring Survey (FMS) findings show Iranian inflows remained limited, short-term, and mainly work-related, while outflows were largely family-driven. Afghan inflows from the Islamic Republic of Iran were mainly due to forced returns, while outflows were economically driven and supported by valid documentation.

Figure 1. Daily number of flows of Iranian nationals between the Islamic Republic of Iran and Afghanistan (01 April to 08 June 2026)

PAKISTAN

Between 01 March and 15 June 2026, a total of 28,305 individuals crossed from the Islamic Republic of Iran into Pakistan, representing a daily average of 265 flows. Movements occurred primarily through the Taftan–Mirjaveh BCP (23,911 individuals) and the Gabd–Kumb–Rimdan BCP (4,394 individuals).⁶ Movements in and out of Pakistan have slowed following the Eid holiday, high temperatures, and security incidents in the country along the route of the Taftan BCP.

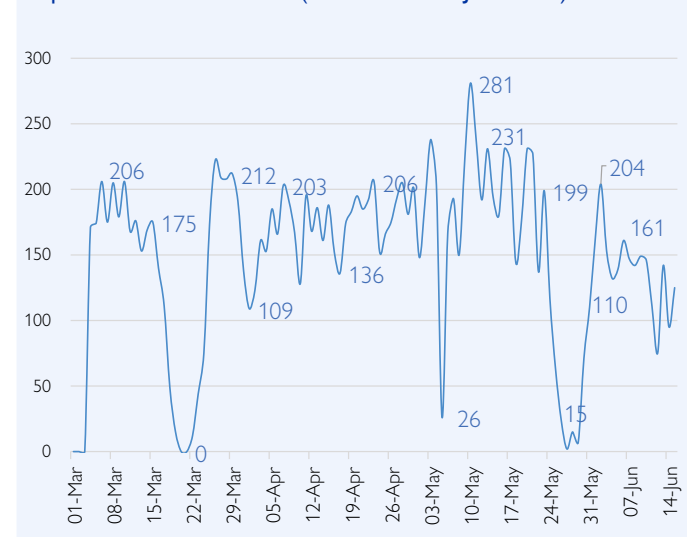

Cross-border movement from the Islamic Republic of Iran to Pakistan through the Gabd and Taftan BCPs remains restricted. Currently, only students, drivers, pilgrims, and tourists with valid passports and visas are permitted entry. **Many travellers are using Pakistan solely as a transit route due to the closure of Iranian airports amid the conflict, before continuing to onward destinations.** Those traveling irregularly to the Islamic Republic of Iran are detained by Iranian authorities and handed over to Pakistan's Federal Investigation Agency (FIA) for processing.

Border authorities reported no influx of Iranian nationals other than those with valid passports and visas in Pakistan. The majority of Iranian arrivals subsequently returned to the Islamic Republic of Iran, primarily as their visits were trade related.

Outbound movement from Pakistan to the Islamic Republic of Iran continues on a limited basis, restricted to Pakistani students and drivers. Although many students initially returned to Pakistan at the onset of the conflict, some are now traveling back to the Islamic Republic of Iran to resume studies.

As of 10 June 2026, a total of 82 Third Country Nationals (TCNs) were recorded in Pakistan. According to authorities, TCNs entering through the Taftan and Gabd–Kumb–Rimdan BCPs were mostly tourists or businessmen. Many had been stranded in the Islamic Republic of Iran and, due to the unavailability of flights, transited through Pakistan before returning to their countries of origin.

Figure 2. Daily number of flows of Iranian nationals from the Islamic Republic of Iran to Pakistan (01 March to 15 June 2026)

⁶ Source: Pakistani authorities, June 2026.

IRAQ

CROSS-BORDER MOVEMENT

As of 15 June 2026, border conditions remained broadly stable with all crossing points opened and no major new restrictions reported. All Border Crossing Points (BCPs) continue to register both incoming and outgoing movements.

The Iraqi Border Point Commission reported that between 01 and 30 April, a total of 271,751 individuals entered Iraq from the Islamic Republic of Iran while 270,142 departed, resulting in a net flow of 1,609 individuals.⁷ During the month of May, there was a significant increase in both arrivals and departures, with arrivals rising to 535,428 (a 97% increase compared to April) and departures reaching 517,160 (a 91% increase).

This sharp rise in cross-border movements is likely linked to a religious pilgrimage period coinciding with the Eid holiday (26–30 May), which typically drives temporary, high-volume travel flows between the Islamic Republic of Iran and Iraq. As a result, despite the substantial increase in overall movement, the net inflow remained relatively moderate at 18,268 individuals, indicating that most movements were short-term in nature.

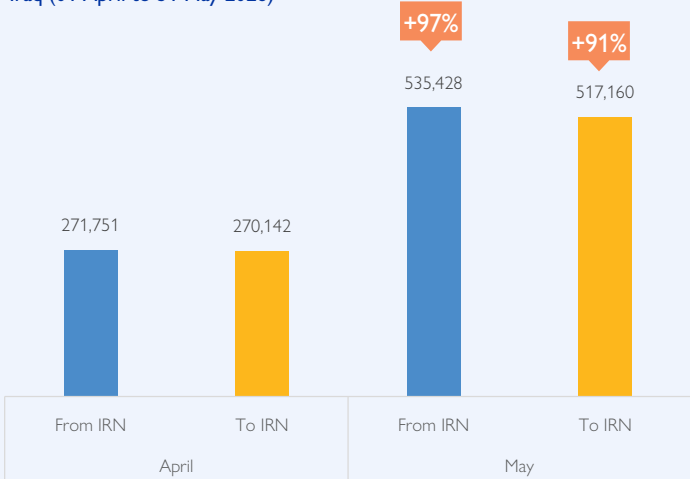

DTM FLOW MONITORING ACTIVITIES AT KEY BORDER CROSSING POINTS (BCPs)

Between 02 and 15 June, data from the DTM Flow Monitoring Registry, which gathers information on individuals' demographic profiles, reasons for movement and intentions, reported that Iranian nationals accounted for 67 per cent of arrivals.

Among incoming movements of Iranian nationals, the primary purposes were family visits (37%), employment (31%), and tourism (15%), with no movements linked to conflict or insecurity reported. All incoming movements of Iraqi nationals were returns after long-term residence in the Islamic Republic of Iran (100%).

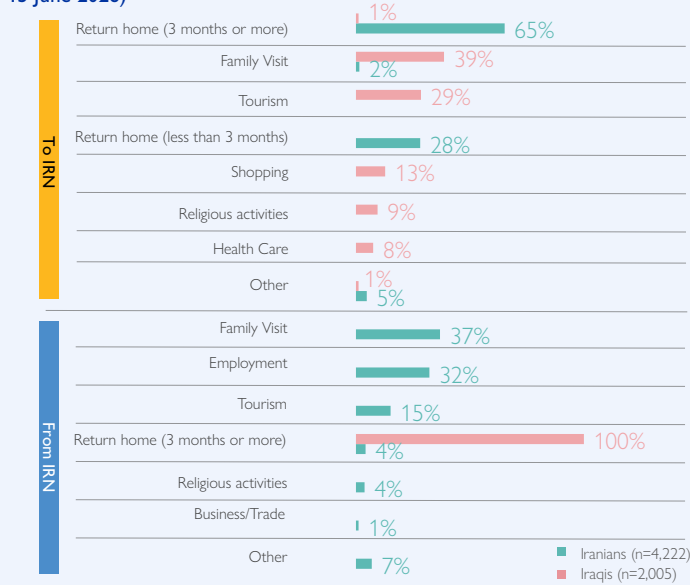

Outgoing movements were mainly driven by returns to the Islamic Republic of Iran following long-term stays (65%, over three months) and short-term stays (28%, less than three months). Outgoing Iraqi nationals primarily travelled for family visits (39%), tourism (29%), and shopping (13%). Iraqi returnees were predominantly destined for Al Sulaymaniyah (97%), with smaller proportions traveling to Erbil (2%) and a minimal share to Baghdad and Kirkuk.

Figure 3. Monthly number of flows between the Islamic Republic of Iran and Iraq (01 April to 31 May 2026)

Note: These figures represent only 4 of the 12 BCPs for which data is currently available: Muntheriyah, Al Sheeb, Al Shalamcha, and Zurbatiyah.

ARMENIA

No new data on movements was received during this reporting period (09 to 15 June 2026).

Between 28 February and 10 March 2026, a total of 4,930 individuals entered Armenia through the Agarak BCP, including 4,381 Iranian nationals. The main nationalities of TCNs included the Russian Federation (72), the People's Republic of China (61), Kazakhstan (43), and Germany (38). As of 01 April, 1,262 Iranian nationals were reported to have returned to the Islamic Republic of Iran via Armenia from the United Arab Emirates.

AZERBAIJAN

No new data on movements was received during this reporting period (09 to 15 June 2026).

Between 28 February and 29 April 2026, a total of 3,564 individuals crossed from the Islamic Republic of Iran into Azerbaijan via the Astara border crossing, including 622 Azerbaijani nationals. Other top nationalities included People's Republic of China (742), the Russian Federation (397), India (294) and Bangladesh (198).

REPUBLIC OF TÜRKİYE

As of 15 June, the situation along Türkiye's border with the Islamic Republic of Iran remains calm, with no indications of irregular movements or increased pressure.

The latest available data on entries at the main Border Crossing Points (BCPs) indicate that arrivals in April averaged 4,200 per day.⁸ These figures include both Iranian nationals and Third-Country Nationals (TCNs) and are consistent with regular cross-border mobility patterns.

TURKMENISTAN

No new data on movements was received during this reporting period (09 to 15 June 2026).

As of 06 May, Uzbekistan organized the return of 41 Uzbek citizens from the Islamic Republic of Iran through Turkmenistan. This is in addition to 13 Uzbek citizens evacuated earlier through Turkmenistan.

According to the EU Delegation in Turkmenistan, additional evacuations of TCNs have taken place. These reportedly included one citizen each from Finland, Austria, Sweden, and France, as well as two citizens from the Netherlands.

IMPACT BEYOND THE ISLAMIC REPUBLIC OF IRAN

The escalation of hostilities is affecting mobility well beyond the borders of the Islamic Republic of Iran, with the widening conflict influencing movement patterns across multiple regions.

LEBANON

CROSS-BORDER MOVEMENT

No new data on cross-border movements was received during this reporting period (09 to 15 June 2026).

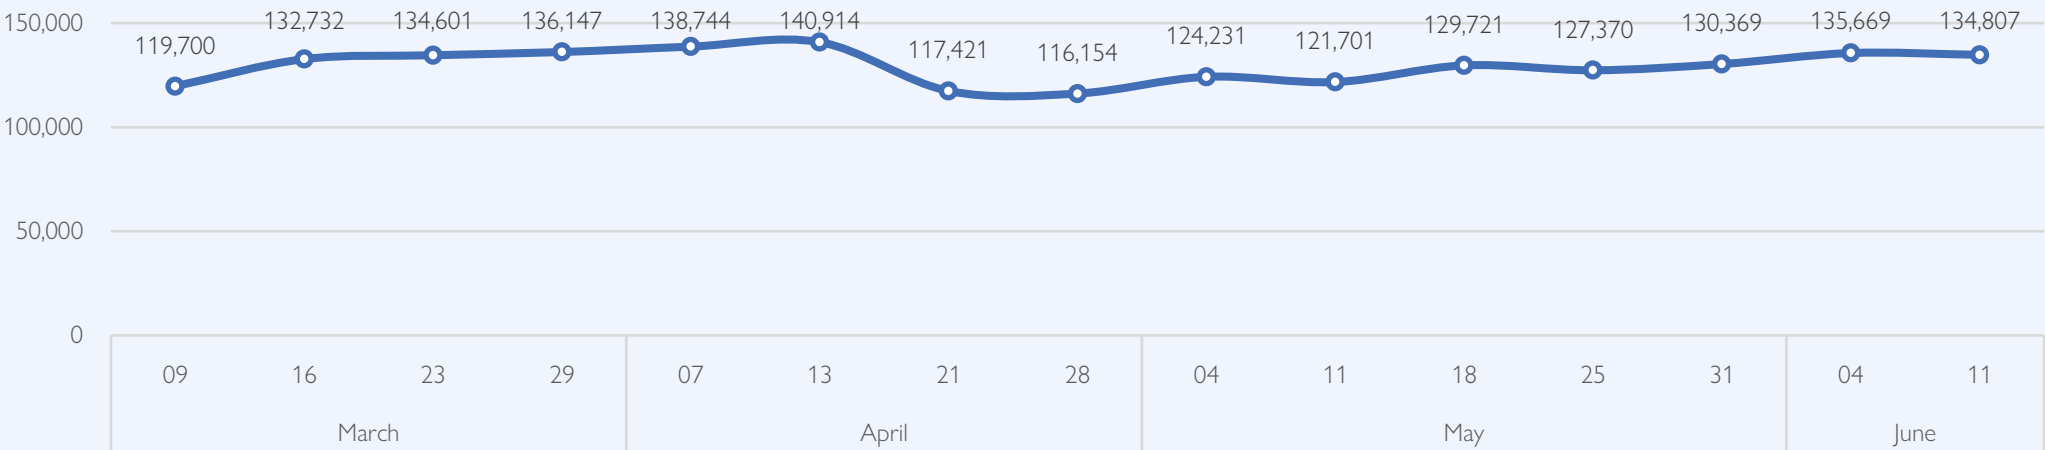

Between 02 March and 20 April 2026, there were 326,992 individuals crossing from the Syrian Arab Republic into Lebanon.⁹ The majority of those crossing were Syrian nationals (80%), followed by Lebanese (17%) and other nationalities (3%).

INTERNAL DISPLACEMENT

With the Memorandum of Understanding agreement between the United States of America and the Islamic Republic of Iran on 15 June 2026, the number of families cautiously returning to their locations of origin continues to increase. However, the majority of the nearly one million people displaced within Lebanon since 02 March remained in areas of reception due to continued security concerns and ongoing hostilities in southern Lebanon.¹⁰ As of 11 June 2026, 134,807 people remain displaced across 642 crowded collective shelters, with thousands more families sheltering in open spaces.¹¹

Authorities continued to advise against returns to high-risk locations, and many displaced families are awaiting further assurances before making decisions regarding return.¹² Many households returning to their home areas appear to be assessing housing conditions and basic service availability while maintaining existing displacement arrangements. As a result, humanitarian needs remain high, shelter capacity remains under pressure, and displacement levels are expected to remain elevated in the near term.

SYRIAN ARAB REPUBLIC

As of 15 June, a total of 441,453 movements had been recorded along the four points of entry (PoEs) at the Syrian-Lebanese border where DTM Syria tracks population movements into the Syrian Arab Republic. Syrian nationals constituted 97 per cent of all recorded movements, with Lebanese nationals accounting for the remaining 3 per cent. DTM also reported the transit of 2,606 Lebanese nationals through Syrian territory towards Jordan.

In addition to cross-border movements into the Syrian Arab Republic, DTM Syria implemented Emergency Mobility Tracking (EMT) to capture arrivals into the country. Between 02 March and 08 June 2026, DTM Syria recorded 121,757 individuals arriving across 1,211 locations in all 14 governorates in the Syrian Arab Republic.

Between 09 and 15 June 2026, Key Informants (KIs) continued to report significant reintegration challenges among newly arrived households. Key informants (KIs) reported increasing intentions among returnees to either return to Lebanon or move within the Syrian Arab Republic due to a lack of sustainable livelihoods in areas of origin. Despite some improvements in basic services, economic hardship remains the main driver of instability, with scarce job opportunities, low wages, and widespread reliance on savings, remittances, or family support to meet basic needs. KIs also noted rising use of negative coping strategies. This pattern is most evident in Aleppo, Ar-Raqqa, Al-Hasakeh, and Idlib, where returnees are reconsidering their decision to stay due to unemployment and poor living conditions. These findings emphasize the need for income-generating support, cash assistance, and economic recovery measures to reduce the risk of further secondary displacement.

Most arrivals were men (31%), followed by women (25%), girls (23%), and boys (21%). This distribution likely reflects employment-related drivers, including both access to livelihoods and job losses. Among the arrivals currently employed (49% of locations), the majority relied on daily wage labour (77%), followed by salaried work (45%) and agriculture or livestock activities (42%). While some work is available, it is generally irregular, informal, and insufficient to provide stable income, leaving many returnees dependent on low-security, short-term employment. As a result, households continue to rely on coping strategies such as savings, remittances, borrowing, and support from relatives, though KIs report these mechanisms are becoming increasingly unsustainable as resources and social support networks are depleted.

More than half of KIs (55%) reported that returnee families were unable to cover essential expenditures through available income alone. A further 44 per cent indicated that earnings met only part of household requirements, while only 1 per cent considered income levels adequate to fully meet basic expenses.

Consequently, economic reintegration remains a major challenge for households returning from Lebanon, with KIs highlighting persistent barriers to financial stability. Local economic conditions are described as weak, with limited labour demand, rising living costs, and declining purchasing power restricting recovery from displacement-related losses.

Challenges

Thirty-seven percent of KIs identified challenges upon arrival. Psychosocial distress, linked to economic hardship and limited livelihood opportunities, was the most frequently reported issue.

Challenges were most pronounced in Al-Hasakeh Governorate (100%), followed by As-Sweida (86%) and Rural Damascus (62%).

Figure 6. Top reported perceived issues and risks faced (% of arrival locations, multiple answers possible)

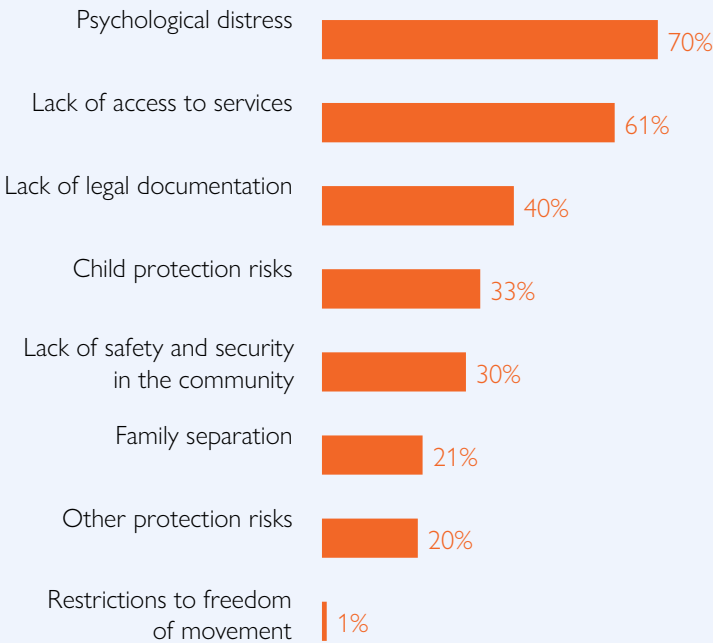

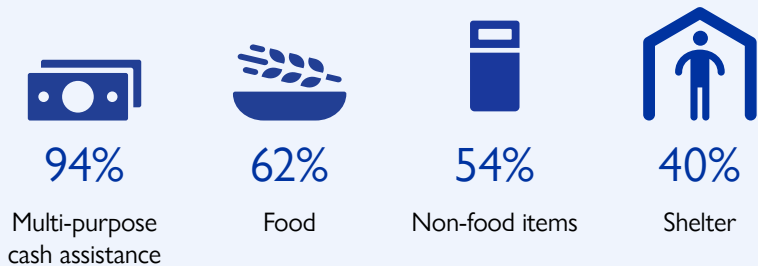

Figure 7. Top reported needs (% of arrival locations, multiple answers possible)

Map 4. Number of individuals at arrival locations in Syrian Arab Republic (02 March to 15 June 2026)

Disclaimer: This map is for illustration purposes only. Names and boundaries on this map do not imply official endorsement or acceptance by IOM.

* Cross-border figures into the Syrian Arab Republic are now sourced from DTM Syria, in coordination with border authorities in the country. Note that due to variations in population coverage, sources and methodology, official sources on movements from Lebanon into the Syrian Arab Republic may differ from previous official sources

METHODOLOGY

This analysis is based on information compiled weekly from IOM's country offices. DTM monitors population mobility and displacement dynamics across countries in Afghanistan, Armenia, Azerbaijan, Iraq, Lebanon, Pakistan, the Republic of Türkiye, Turkmenistan, and the Syrian Arab Republic.

Data is drawn from primary DTM flow monitoring and mobility tracking activities, alongside secondary sources, such as government data, with all secondary information validated by our field teams. This includes data on cross-border movements, internal displacement, and qualitative insights on emerging mobility trends and humanitarian needs. While efforts are made to align reporting to the same reference week, collection periods may vary across countries.
