

SUDAN SITUATION

March 2026

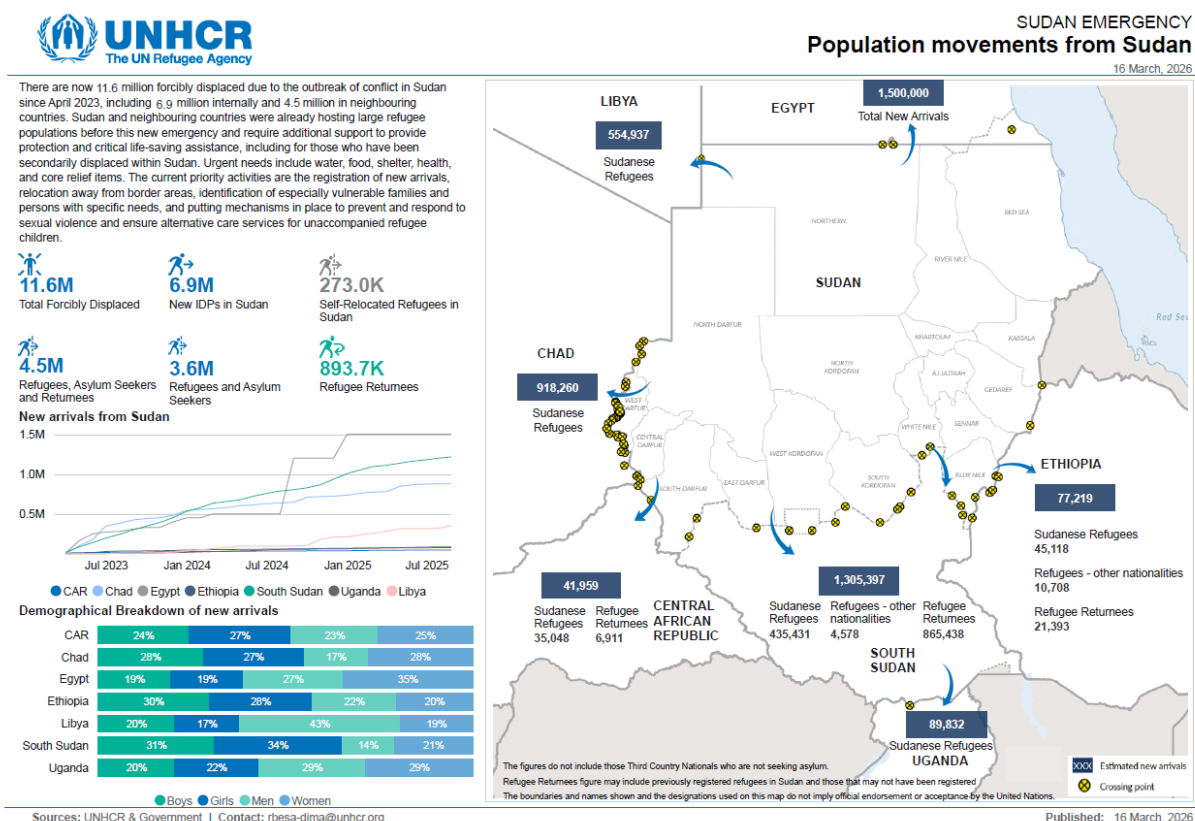

Sudanese refugee Awati displays the ingredients she has sourced to begin producing traditional Sudanese perfumes in Adré, eastern Chad. © UNHCR/ Levon Sevunts

Highlights

- **Sudan:** Armed clashes intensified in the Darfur and Kordofan States, marked by ground fighting, artillery fire, and drone strike and reports of criminal activity, intercommunal violence, and increased tensions near the Tina crossing along the Chad–Sudan border. In the Kordofan States, fighting escalated further along the Dilling, Abu Jubaiha, and Al Rahad towns, with attacks on vehicles along key routes disrupting movement and supply lines, heightening risks for civilians. On 31 March, the Government of Sudan announced an extension of the Adre humanitarian corridor from 1 April to 30 June 2026, a cross-border route facilitating the delivery of humanitarian assistance from Chad into Darfur and supporting limited movement of aid supplies and personnel into affected areas.
- **Central African Republic (CAR):** Despite relative calm in Birao, the security situation across Vakaga remains fragile and volatile. Robbery, extortion, and looting were reported along the Ouanda-Djallé, Sikikédé–Mangagne, and Tissi–Sarayevo roads, underscoring the continued exposure of civilians to armed actors on key transit routes. Incidents of intercommunal violence were also recorded, reflecting a persistently concerning security and protection environment across the prefecture.
- **Chad:** Ouaddaï Province continued to face a fragile and deteriorating public health situation. A deadly meningitis outbreak, ongoing measles transmission, and heightened outbreak risks posed serious threats to population health and had the potential to constrain planned large-scale refugee relocations if not urgently contained.
- **Egypt:** On 11 March, representatives from the embassies of France, the European Union, Poland, and Switzerland [visited](#) UNHCR's Reception Centre where they observed how refugees access registration and protection services. The delegation received an overview of UNHCR's processes and

witnessed frontline reception activities aimed at ensuring refugees and asylum-seekers receive timely documentation and support.

- Libya:** Following the technical consultations held in February 2026 between UN agencies and relevant Libyan government ministry counterparts, the virtual launch of the [2026 Sudan Refugee Response Plan \(RRP\) – Libya Chapter took place 16 March 2026](#). The launch featured high-level interventions from the Deputy Special Representative of the Secretary-General (DSRSG), the UNHCR Regional Refugee Coordinator for the Sudan Situation, the UNHCR Representative in Sudan, and the Head of the Department for International Organizations at the Ministry of Foreign Affairs. The [Response Plan](#), involving 14 UN agencies and international NGOs, aims to assist 667,000 people comprising 596,000 refugees, 1,000 third country nationals, and 70,000 host community members, with a projected budget of US\$115.5 million. Multi-sectoral assistance, focusing on protection, basic services, and resilience support, seeks to provide nearly 200,000 people with protection services, over 221,000 people with food assistance, 180,000 people with essential items and support 398,000 individual health consultations.
- South Sudan:** The Norwegian Minister of Foreign Affairs visited Renk, with engagements spanning from the Joda border crossing, the Abukadra returnee settlement site, and to the Renk Transit Centre. The Minister engaged directly with newly arrived families in Abukadra, as well as refugees, returnees, and third-country nationals at the transit centre, commending the strong coordination and efforts of partners in addressing the needs of new arrivals. The delegation expressed appreciation to partners at every stage of the visit and requested that gratitude be extended to the County Commissioner for his efforts in facilitating returnee settlement in Abukadra. During one-on-one briefings, the delegation raised questions on the security situation, funding challenges, protection risks, priority needs, and ongoing collaboration with government authorities.
- Uganda:** The security situation in Kiryandongo Settlement, home to the largest population of Sudanese refugees, continued to deteriorate, driven by economic hardship and underlying ethnic tensions, with UNHCR and partners scaling up community-based protection, conflict mitigation initiatives, and livelihood support to ease tensions and enhance social cohesion.

Situation and Operational Response

SUDAN

Highlights

- The security situation in Blue Nile State deteriorated significantly during March. Following intensified hostilities in Kurmuk and Giessan localities, Kurmuk town and Muqja in Bau locality were captured by Rapid Support Forces (RSF) and the Sudan People's Liberation Movement–North (SPLM-N) joint forces on 24 and 26 March respectively, triggering large scale displacement of tens of thousands primarily to Ed Damazine and other locations within Blue Nile. Damazine remained under government control; however, insecurity and access constraints continued to disrupt humanitarian operations and increase pressure on services.
- The security situation in Khartoum, Northern, and Red Sea States remained generally calm; however, the operational context continued to be complex. The influx of returnees has placed pressure on already weakened basic services, while worsening economic conditions, including fuel shortages and rising prices, affected transportation and access to services, heightening protection risks. In Red Sea State, authorities indicated plans to relocate displaced persons to Al Hishan site, with preparatory activities underway for approximately 3,000 households. UNHCR engaged with the authorities to promote planning and coordination with relevant actors to ensure that any movements are safe, orderly, and dignified, and that site management decisions follow agreed guidance and safeguard affected households.
- Gedaref and Kassala States remained relatively stable, with no disruptions to operations and no reported refugee arrivals despite insecurity near the Sudan–Ethiopia border. In Kassala, authorities indicated plans to close Al Karama IDP site; however, timelines and relocation arrangements remain unclear, raising concerns about potential secondary displacement. Humanitarian actors' engagement with authorities continued to promote adherence to established guidance and safeguards for affected households.
- The security situation in White Nile State remained generally stable during the reporting period, with no incidents directly affecting humanitarian operations or facilities. The state continued to be affected by spillover from hostilities in North and South Kordofan, including increased UAV and drone activity. Reported strikes affected civilian infrastructure in Kosti, Rabak and Al Jabalain towns. Continued clashes along the Kadugli–Dilling axis in South Kordofan and the El Obeid corridor in North Kordofan drove displacement into White Nile, with arrivals mainly recorded in Kosti and Rabak, adding pressure on basic services.

Population Movements and Registration

Between 1 and 29 March, authorities reported that approximately 21,600 Sudanese returnees entered Sudan through the Argeen and Ashkeet border crossings in Northern State, compared to 30,000 returnees at the end of February 2026.

In March, around 2,500 refugees and asylum-seekers arrived in Sudan, mainly from South Sudan, Eritrea and Ethiopia. These refugees and asylum-seekers are hosted in White Nile, Kassala, Gedaref and Blue Nile States.

Protection

In Northern State, UNHCR and partners conducted protection monitoring at Argeen and Ashkeet border points among returnees. Key concerns included family separation, confiscation of documents, and limited access to food, shelter, health care, and psychosocial support.

Household-level protection monitoring among IDPs and returnees identified priority needs related to food assistance, non-food items, and access to essential services in Khartoum State. Urgent cases were referred to partners for follow-up support.

Protection partners carried out monitoring through key informant interviews and community-based mechanisms in camps and gathering sites, reaching over 500 individuals in East and South Darfur. Reported concerns included access to food, health care, WASH, livelihoods, and safety; findings informed response planning.

In March, the protection hotline in North Darfur received 72 calls from IDPs, refugees, and host community members seeking information and reporting insecurity and limited access to basic services. Women

reported incidents of sexual violence and were referred to partners for specialised support services. In Gedaref State, protection hotlines received 18 calls, and 12 individuals accessed urban counselling services. Door-to-door monitoring provided direct support to 61 forcibly displaced people on shelter, legal issues, documentation, and psychosocial care. In Um Gargour, Um Rakuba, and Babikri refugee camps, over 200 forcibly displaced people participated in three Accountability to Affected Populations (AAP) meetings raising concerns on services and living conditions, which were shared with partners for follow-up. In Blue Nile State, five monitoring visits were conducted in Camp 6. While no major incidents were reported, refugees raised concerns about the presence of armed personnel at night, affecting safety and the civilian character of the site. UNHCR is continuing its advocacy with authorities to maintain the civilian character of the camps.

UNHCR in coordination with the Commission of Refugees (COR) in Gedaref State, supported 22 refugees and asylum-seekers apprehended due to lack of documentation to return to camps, preventing deportation and ensuring access to protection.

Child Protection

UNHCR partners conducted Best Interest Assessments (BIAs) for 12 refugee children identified in Gedaref State. Another 20 child protection cases were identified and referred to specialized service providers for support. In Um Rakuba refugee camp, Gedaref State, a child was reunified with family members in close coordination with partners.

In Kassala State, awareness sessions on child protection, exploitation, hygiene and first aid were delivered in Shagarab and Kilo 26 refugee camps using interactive drama and puppet theatre. Psychological First Aid was provided to 30 children in Wad Sharifi refugee camp, while over 75 children in Kilo 26 refugee camp participated in child rights and protection sessions. Case workers conducted four home visits supporting eight children with food and non-food items.

UNHCR's partner in East Darfur State conducted 13 home visits in El Ferdous and Kario refugee camps to monitor unaccompanied and separated children and their caregivers, reaching some 70 children. Identified needs included clothing, access to education, and improved shelter conditions, as reported by caregivers. In addition, nine group psychosocial support and recreational sessions reached over 300 children through structured activities promoting wellbeing and safe social interaction.

UNHCR's partner delivered three child protection and gender-based violence awareness sessions for some 360 refugees in Camp 6, Blue Nile State, and an additional 12 sessions for over 400 IDPs. Child-Friendly Spaces in the Al Karama gathering sites continued providing psychosocial support and recreational activities to over 730 children.

In White Nile State, 11 children at risk were identified in Al Alagaya and Um Sangour refugee camps who received appropriate support from UNHCR's partner.

GBV Prevention and Response

GBV awareness activities were held in Shagarab refugee camp in Kassala State to mark International Women's Day using interactive drama and dialogue sessions with women, men, girls and boys. Discussions focused on harmful practices including female genital mutilation and child marriage.

11 GBV incidents were identified across Shagarab, Wad Sharifi and Griba camps in Kassala State, involving sexual violence, physical assault, kidnapping with assault and psychological violence. Survivors received Psychological First Aid and were referred to medical and psychosocial services.

Women's and adolescent girls' groups facilitated seven dialogue sessions in Wad Sharifi and Shagarab refugee camps in Kassala State on risks such as bullying, physical abuse and child marriage reaching close to 120 participants. Thirteen additional awareness sessions across the camps reached some 200 refugees and host communities on GBV prevention, sexual exploitation, early marriage, cyberbullying, hygiene and psychosocial wellbeing.

A three-day capacity-building workshop for 18 Community-Based Protection Network members was conducted in Al Sulaimaniya in Jabal Awlia locality in Khartoum State, covering protection, GBV prevention and Psychological First Aid.

UNHCR's partner provided psychosocial support and referred survivors for medical care in 15 identified cases of GBV in Kario camp and El Ferdous refugee settlement in East Darfur. In North Darfur State, UNHCR's partner reported 11 SGBV cases. Survivors were referred by the partner to medical facilities for treatment and received psychosocial support to address immediate protection and mental health needs.

UNHCR's partner identified one GBV case at Al Karama 1 IDP site in Blue Nile State; the survivor received psychosocial support, medical care, and further referrals to partners for additional specialised support. In White Nile State, UNHCR's partner identified nine GBV incidents across camps involving female and male survivors and provided survivors with legal assistance, medical support, and dignity kits.

With support from UNHCR, Gadah Charity, a forcibly displaced persons-led organization, commenced protection activities in Dereig IDP camp, South Darfur. In addition, UNHCR delivered three-day capacity-building sessions for 15 staff on protection from sexual exploitation and abuse (PSEA), safeguarding, reporting mechanisms, financial management, and project implementation.

Community-based protection

Multi-purpose community centres (MPCC)

More than 15,200 refugees, asylum-seekers and IDPs accessed protection services and activities at UNHCR-supported MPCCs in North, East, South, West and Central Darfur States and West Kordofan States in March. Services included protection counselling, referrals through protection desks, group and individual psychosocial support, GBV and sexual violence awareness sessions, recreational activities, and community-led initiatives.

UNHCR's partner equipped two MPCCs in Otash and Beleil localities in South Darfur with solar power systems to improve operational capacity and ensure continuity of protection services.

In Red Sea and Khartoum States, more than 800 refugees, IDPs and host community members accessed protection services at UNHCR-supported MPCCs. Services included protection counselling, documentation support, referrals to specialized health and protection services, psychosocial support, cash assistance through community-based mechanisms, food assistance for vulnerable cases, awareness sessions on psychosocial well-being and social issues, and recreational activities for children.

UNHCR's partner reached over 4,000 refugees, IDPs, and host community members through protection and psychosocial activities at MPCCs in White Nile State. Services provided included awareness sessions on protection risks and available services, group and individual psychosocial support, life-skills and recreational activities for youth, PSEA training, and community engagement activities such as meetings and community-led initiatives, strengthening wellbeing and community participation in protection mechanisms.

Community-based Protection Networks (CBPNs)

In Kassala State, UNHCR-supported CBPNs, identified over 50 refugees with specific protection concerns and referred them for specialised assistance provided by UNHCR's partner. Cases primarily involved persons with disabilities, elderly persons at risk, women at risk, individuals with medical concerns and GBV survivors. Identified individuals received referrals for services including food support, NFIs, clothing and hygiene items, based on assessed needs. Refresher training courses for CBPN members in Kilo 26, Al Girba and Aboda towns, Kassala State focused on case identification, documentation, reporting and safe referral pathways.

Health and Nutrition

Health facilities in Gedaref State provided over 6,000 outpatients consultations during the reporting period, with the most common illnesses recorded being acute respiratory infections, malaria, diarrhoeal diseases, and skin infections. Five cases required referral to secondary care at state hospitals. Disease surveillance continued, including monitoring of suspected chickenpox cases in Um Rakuba refugee camp. Health partners reached over 10,000 forcibly displaced people through household visits and awareness sessions focusing on disease prevention and health promotion.

Measles cases were treated at camp-level health facilities in White Nile State including seven refugee cases and one host community case with no deaths recorded. Mortality surveillance recorded 28 refugee deaths in White Nile State in March, compared to 34 in February 2026. Of these, six were children under

five, including three neonatal deaths. Health facilities in White Nile refugee camps provided 25,502 outpatient consultations in March (62 per cent refugees; 38 per cent host community/IDPs), representing a 13 per cent decrease compared to February.

Shelter and non-food items (NFIs)

In Gedaref State, UNHCR and its partner supported vulnerable refugee households across Um Rakuba, Babikri, and Tunaydbah refugee camps through a combination of shelter rehabilitation and non-food item assistance. Thirteen households received core relief items and 24 received emergency shelter kits (ESKs) consisting of plastic sheeting and basic construction materials to reinforce or establish temporary shelters. Additionally, 37 traditional shelters (tukuls) were repaired, improving safety and living conditions, while CRI kits were distributed to 15 households affected by fire incidents in Tunaydbah and Um Rakuba. ESKs were further distributed to 15 households in Tunaydbah and five households in Um Rakuba, helping families address immediate shelter needs and improve their overall living conditions.

UNHCR and partners distributed some 1,000 NFI kits in Al Karama 3 and 4 IDP sites in Damazine locality, Blue Nile while close to 460 NFI kits were distributed to newly arrived households who fled from Kordofan States to Goz Al-Salam IDP site in Kosti locality In White Nile State. Each kit comprises plastic sheets, jerry cans, blankets, sleeping mats, a solar lamp and a kitchen set.

Water, Health, and Sanitation (WASH)

In Gedaref State, refugees and asylum-seekers received an average of 26 litres of water per person per day across the four refugee camps, exceeding minimum daily supply standards. In addition, around 160 water taps were replaced in Um Rakuba, Babikri, and Um Gargour camps, improving access to safe water and reducing service interruptions.

WASH partners ensured access to safe drinking water for over 500,000 refugees and host community members in White Nile and Blue Nile States. UNHCR's partner constructed 10 communal latrines and desludged 50 non-functional units to improve sanitation services and support community-level maintenance. In Blue Nile State, UNHCR's partner restored sanitation services for approximately 5,000 refugees through the desludging of 50 latrines.

Livelihoods

In White Nile State, UNHCR's partner supported 400 IDPs, refugees, and host community members in Um Sangour and Khor Al Waral refugee camps through Village Savings and Loan Associations to access small loans for household needs and income-generating activities. In addition, 10 fishing groups comprising 50 forcibly displaced people were established in the same locations and provided with fishing materials, including nets, cooling boxes, hooks, paddles, and fishing sticks, to strengthen productivity and support sustainable household income.

CENTRAL AFRICAN REPUBLIC (CAR)

Highlights

- UNHCR and its partners conducted a rapid needs assessment for newly arrived Sudanese refugees in Ouanda-Djallé and Sikikédé in the Vakaga prefecture. In Ouanda-Djallé, 243 households comprising 787 individuals were identified and registered at Level 1 as new refugees and received essential items. In Sikikédé and Manou, UNHCR distributed essential items including tarpaulins, jerrycans, mats, buckets, and blankets to 129 refugees.
- Registration and biometric enrolment missions were conducted by the National Commission for Refugees (CNR), UNHCR and partners in Manou and Sikikédé, in Vakaga Prefecture, as well as in Mboki, in Haut-Mbomou Prefecture. These missions enabled the registration of nearly 855 newly arrived Sudanese refugees, comprising 211 households, and the issuance of identity documents to facilitate their freedom of movement.

Population Movement and Registration

As of 31 March, CAR hosted nearly 42,000 Sudanese refugees from around 13,100 households, representing an 11 per cent decrease (nearly 5,200 refugees) compared with 47,000 registered individuals as of 15 December 2025. This decrease is mainly due to the physical verification exercise conducted by the Government and UNHCR in Korsi, following observations of spontaneous departures and prolonged absences over a given period.

Protection

UNHCR and its partner partner *Comité International pour l'Aide d'Urgence et le Développement* (CIAUD) conducted 44 protection monitoring visits in Vakaga prefecture, in Birao mainly in Korsi, Matala, Am Dafock, Delembe, Ouandja, Sérégo, Koumbal 1, Kpougou and Ouanda-Djallé.

These monitoring activities enabled the documentation of 106 protection incidents, with violations of property rights remaining the most prevalent, particularly extortion and illegal taxation, followed by physical assaults, violations of the right to freedom, and one incident involving loss of life.

Most incidents were attributed to state actors and allies, and non-state armed groups, highlighting continuing insecurity affecting refugees and host communities. Geographically, the incidents were concentrated in Ouanda-Djallé, Birao, Am-Dafock, and Ouandja-Kotto, reflecting persistent protection risks across key areas of Vakaga prefecture. These protection incidents affected both refugees and host community members, with adult men constituting most victims due to their mobility while seeking livelihoods.

To mitigate and respond to protection-related risks and incidents, UNHCR and partners strengthened monitoring, referral, and advocacy, while reiterating the need to reinforce GBV and child protection services and further support community-based protection structures to enhance prevention and response mechanisms.

Prevention and response to GBV

UNHCR and CIAUD strengthened the prevention and response to violence against women and girls in the Vakaga and Haute-Kotto prefecture, where reported incidents included physical assault, psychological violence, and denial of resources. Many incidents occurred in domestic settings. All survivors received psychosocial support in safe spaces.

CIAUD also conducted community-based awareness-raising on causes, harmful norms, risks, prevention and reporting mechanisms of gender-based violence. Strengthening the engagement of men and boys remains critical to promoting a more inclusive and sustainable community-based approach to preventing sexual violence.

CIAUD also continued awareness-raising activities in Bamingui-Bangoran, Vakaga and Haute-Kotto prefectures on the prevention and impact of GBV and women's rights reaching 600 people amongst the refugees, host communities and IDP. At the end of these activities, participants demonstrated increased awareness of harmful cultural norms and behaviors that constitute risk factors for gender-based violence.

Accountability to the affected population (AAP)

UNHCR and CIAUD, continued to reinforce accountability to affected populations in Korsi through ongoing feedback collection, referrals, awareness-raising, and follow-up on complaints. The team collected 1858 complaints, mainly related to assistance cards and discrepancies in household sizes. These complaints directly referred to existing response mechanisms to provide feedback to the complainants.

In addition, four community outreach awareness sessions were conducted by the complaints management committees in the Korsi neighborhood, reaching 479 people.

Child protection

UNHCR and partners continued child protection activities in Korsi, focusing on promoting children's rights, psychosocial well-being, and social cohesion. The participation gap between girls and boys underscores the need to strengthen community outreach and awareness efforts to encourage more balanced engagement, while addressing sociocultural barriers and domestic responsibilities that may limit girls' participation.

Identified needs and gaps to address include strengthening the presence of child protection actors in Birao through holistic service packages, improving coordination of child protection case management with the involvement of available decentralized state services, and constructing semi-durable Child-Friendly Spaces rather than easily vandalized or degradable local materials.

Education

UNHCR and its partner *Centre de Support en Santé Internationale* (CSSI), in collaboration with the Academic Inspectorate of the Vakaga prefecture, continued supporting refugees' integration into the national education system. During the reporting period, 132 people participated in French language courses, including 91 refugees and 41 host community members. This activity aims to prepare Sudanese refugee students to integrate into the Central African education system, where lessons are delivered in French.

Shelter and Non-Food Items (NFIs)

The construction of semi-durable shelters for people with specific needs is ongoing in Korsi. To date, 150 shelters have been completed, providing vulnerable households with safe and dignified living conditions. In March, UNHCR also completed the construction of the health centre in Korsi, improving access to healthcare for residents of Birao. Assessment missions in hosting areas outside of Korsi (Sikikédé, Sam-Ouandja and Ouandja-Djalle) identified important needs in term of sustainable housing for new refugees, especially for vulnerable people with specific needs.

Water, Sanitation and Hygiene (WASH)

To improve access to household sanitation, UNHCR's partner NOURRIR initiated the construction of 80 semi-durable family latrines, of which 75 have been completed. This intervention aims to improve sanitation conditions, reduce open defecation, and mitigate the risk of waterborne diseases in the context of displacement.

In addition, NOURRIR's hygiene promotion activities reached around 6,000 people in Korsi. These activities included focus group discussions, cleaning of communal spaces and door-to-door awareness-raising on safe water management, latrine use, waste disposal, and environmental hygiene, aiming to improve public health conditions.

Assessment of missions and regular engagement with displaced and host communities highlight the ongoing needs for access to safe and clean water in rural areas hosting displaced population.

Health and Nutrition

Medical teams from the CSSI and the International Medical Corps (IMC), coordinated by the Vakaga health district, continued to provide medical consultations for refugees and host communities in Birao.

In March, CSSI and IMC provided consultations to 1,018 people, including 835 refugees and 183 members of the local population. Children aged 0 to 59 months accounted for 315 of the totals. During the reporting period, 64 women affected by forced displacement benefited from antenatal care services.

UNHCR and CIAUD, conducted outreach sessions for 100 members of village savings and loans associations (50 women and 50 men) as part of a livelihoods project. The sessions focused on member engagement, timely contributions, and women's leadership, aiming to strengthen socioeconomic empowerment.

CHAD

Highlights

- In March, security along the Chad–Sudan border deteriorated sharply, with eastern Chad experiencing sustained cross-border spillover from the Sudan conflict. A series of drone strikes—including in Adikong (12 March), North Darfur (16 March), and Tina/Tiné on both sides of the border (18 March)—further undermined the security environment, causing casualties among Chadian civilians and Sudanese refugees and damaging critical infrastructure. In response, on 22 March, the Government of Chad reinforced border closure measures by deploying additional forces, placing them on maximum alert, and maintaining the closure of the border, while authorizing immediate retaliation against attacks originating from Sudan; however, the border remained open for humanitarian operations and cross-border assistance, including asylum-seekers.
- This response was complemented by a high-level government mission aimed at easing tensions and preventing further escalation. By end of April, these measures had yielded positive results; no further security incidents have been reported since 18 March, military presence has been

gradually reduced since 26 March, and overall tension levels have noticeably eased, indicating a return to a more stable and predictable security environment.

Population Movements and Registration

Despite border closure measures, cross-border population movements into Chad continued in March, albeit at significantly reduced levels. A total of 2,221 individuals crossed into Chad in March, compared to 5,915 in February and 12,981 in January. This sharp decline is attributed to the intensified military presence and security operations at border points, as well as reduced population movement during the holy month of Ramadan.

Since January 2026, Chad has received 15,557 newly arrived refugees from 6,264 households, bringing the cumulative total registered since the attack on El-Fasher in late October 2025 to 35,960 individuals (14,328 families). Overall, since April 2023, Chad has recorded a total of 919,200 refugees across 264,246 households.

Border monitoring activities reveal a clear shift in arrival patterns toward Ennedi Est Province, which accounted for 65 per cent of arrivals in March. Displacement continues to be overwhelmingly driven by insecurity linked to armed conflict (65 per cent) and persecution (30 per cent), with no preventive flight or displacement related to economic factors or access to services recorded during the month. Protection risks during displacement intensified, with 79 per cent of households reporting at least one human rights violation.

As of 23 March, a total of 896,737 refugees had been pre-registered and registered out of the 919,200 recorded since April 2023. Eighty-six per cent of this population are women and children, of whom 25 per cent are women.

Protection monitoring activities were significantly strengthened during the first quarter of 2026. In March, 1,172 households and 323 key informants were interviewed, with 1,291 protection incidents documented, up from 689 in February and 472 in January. This upward trend reflects the expansion of geographic coverage, particularly in eastern Chad, and the enhanced deployment of protection monitors and partners.

Relocation

In March, UNHCR supported the relocation of 1,394 refugees from border areas to the developed sites of Oure Cassoni (Ennedi East), Dougui, and Kouchaguine-Moura (Ouaddaï), a decrease from the 7,464 individuals relocated in February 2026. Since January 2026, a total of 13,904 refugees were relocated from border areas to safer inland sites, where shelter, water, hygiene, and sanitation services have been established to ensure dignified living conditions.

The sharp deterioration of the security along the Wadi Fira border has prompted UNHCR, in collaboration with the government, partners, and stakeholders, to establish an accelerated relocation plan targeting the relocation of over 40,000 refugees from border areas within the next six months. Since April 2023, over 615,000 refugees have been relocated from border entry points to safer inland sites, where they are better protected and have access to assistance.

Protection

GBV prevention and response

GBV partners continued delivering a comprehensive multisectoral response for survivors during the reporting period, including psychosocial support, case management, and referrals to health, legal, protection, and security services. Reported incidents comprised primarily psychological violence (47 per cent), physical assault (29 per cent), rape (11 per cent), forced marriage (6 per cent), denial of resources (4 per cent), and sexual assault (3 per cent). A notable increase in rape cases involving minors was recorded, some resulting in unwanted pregnancies, prompting reinforced prevention and community awareness activities.

Prevention efforts were strengthened across all sites through community awareness sessions, focus group discussions, and educational talks led by community outreach volunteers, refugee committees, and partners. Activities focused on the impact of GBV, the importance of reporting rape within 72 hours, and strengthening community support mechanisms. A total of 5,835 individuals were reached (3,546 women,

42 men, 984 girls, and 363 boys), and 187 community volunteers and GBV committee members received training.

International Women's Day was commemorated across all developed sites under the themes "Rights. Justice. Action." and "Every Woman Counts," promoting women's and girls' participation and empowerment. Risk mitigation measures included the production and distribution of improved cookstoves and eco-friendly charcoal, installation of solar streetlights, training of women in cookstove production, and the provision of dignity kits and cash assistance to GBV survivors in Adré.

Human Rights Documentation: Amana Wa Salama Project

Under the Amana Wa Salama project, 72 cases of serious human rights violations were documented, committed both prior to displacement from Sudan and during flight into Chad. Cases were recorded across multiple locations: 39 in Marassabré, 27 in Goudrane, 6 in Oure Cassoni, and 5 at the Tiné transit site. Documented violations included physical violence, collective assaults, and gender-based violence.

Most survivors are women and girls, all of whom received comprehensive response services including mental health and psychosocial support (MHPSS), medical care, and material assistance. In addition, 270 individuals comprising both newly identified and previously documented cases received multipurpose cash assistance to address urgent protection needs and strengthen coping and recovery mechanisms.

Protection from Sexual Exploitation and Abuse (PSEA)

From 23 to 26 March, UNHCR conducted a PSEA mission in Iriba, Wadi Fira, combining capacity-strengthening and coordination efforts. Training sessions delivered in Guéréda, Milé, and Marassabré reached 68 humanitarian staff and revealed critical gaps, notably the deployment of partner staff without prior PSEA training or formal Code of Conduct signatures. The mission recommended reinforced community and committee training, regular refresher sessions, and the development of a national PSEA policy framework.

On 26 March, UNHCR convened the first regional PSEA Task Force meeting in Iriba, covering Wadi Fira and Ennedi Est, to review the national PSEA action plan, Task Force modalities, Ajala reporting updates, and Q1 activities. During the monitoring period, 18 complaints were recorded, including three GBV cases referred to partners for multi-sectoral assistance. Engaging Men through Accountable Practice (EMAP) activities engaged 23 men to strengthen accountability and prevention of violence against women and girls.

Child Protection

In March, child protection partners continued identifying unaccompanied and separated children (UASC) and other children at risk across all refugee reception sites in eastern Chad. On 5 March, UNHCR and partners — SOSVET, INTERSOS, Jesuit Refugee Service (JRS), and World Vision conducted a joint assessment to inform a multisectoral response to cases of child abandonment and infanticide. Capacity-building efforts were strengthened through a Best Interests Determination (BID) workshop held on 23 March in Iriba for 23 representatives from administrative, judicial, security, and social services, focusing on national child protection procedures and coordination.

An additional 48 partner staff benefited from MHPSS training covering psychosocial assessment, digital data collection, and service coordination, while UNHCR and JRS trained 314 community workers on child protection standards, ethics, and case management.

Key achievements during the reporting period included the civil registration of 386 children, multisectoral assistance to 471 children at risk, and the completion of 156 Best Interest Assessments (BIAs). Social and recreational activities reached 20,574 children (42% girls), and 238 children received material assistance. Community awareness activities reached 6,158 people, and one unaccompanied child was successfully reunified in Marassabré with the support of the International Committee of the Red Cross (ICRC), UNHCR, and JRS.

Shelter

The preparation of emergency shelter infrastructure in eastern Chad is facing critical delays due to centralized authorization bottlenecks, posing a direct risk to planned refugee relocation efforts. Despite coordination at the provincial level, shelter construction remains hindered by government counterpart

procedures requiring clearance from the capital before site access or works can commence. In Kouchaguine-Moura and Arkoum (Ouaddaï Province), construction of 2,715 UNHCR-supported emergency shelters has yet to begin, despite site validation and delivery of materials. Advocacy is ongoing to expedite approvals and decentralize authorization processes to provincial and departmental levels to prevent further disruption to life-saving activities.

UNHCR continues to face additional constraints on humanitarian operations linked to obstruction by a government counterpart. Shelter construction at the Oure Cassoni site hosting 113,481 refugees (33,078 households, including 56,740 new arrivals fleeing the Sudan crisis), is increasingly undermined by recurrent individual land claims that challenge administrative decisions already formally validated by competent authorities. These incidents risk a rapid deterioration of living conditions, heightened social and security tensions, and erosion of partner and donor confidence. UNHCR has conducted advocacy with local authorities to enforce validated decisions, secure humanitarian infrastructure, and prevent further obstruction of life-saving activities.

Health and Nutrition

The epidemiological situation in Ouaddaï Province remains concerning, with multiple outbreaks under active surveillance, notably meningitis, measles, and an ongoing risk of poliomyelitis. High morbidity and mortality linked to meningitis, combined with measles transmission and population concentration, continue to pose significant public health risks and may affect the planning of large-scale refugee relocations.

The meningitis outbreak remains the most serious public health concern in Ouaddaï due to its high mortality rate. A total of 101 suspected cases were reported province-wide, including 22 deaths (8 in health facilities) and two severe cases currently under observation. In Adré alone, 66 cases have been recorded, including four laboratory-confirmed cases. Community-based death reporting remains challenging due to sociocultural barriers, though health authorities are working with community relays to strengthen surveillance. Response efforts are focused on community sensitization, and WHO has indicated that a vaccination campaign is imminent following completion of an ongoing risk assessment. Preventive measures including vaccination, limiting overcrowded gatherings, and reducing exposure to extreme heat have been widely reiterated. Authorities have warned that a worsening outbreak could negatively affect forthcoming large-scale refugee relocation plans.

Measles transmission continues in the Adré health district, with 423 suspected cases recorded, including 11 confirmed. A reactive vaccination campaign was launched on 30 March 2026, preceded by identification of vaccination sites, training of response teams, and an advocacy meeting at the Prefecture chaired by the Prefect to ensure strong administrative engagement and community mobilization. In parallel, a national polio vaccination campaign is planned for 10–12 April 2026, with preparations underway across Ouaddaï health facilities.

Preventive health and WASH activities continue to support outbreak control, with 18,263 people sensitized (71 per cent women) through household visits and hygiene sessions. ACTED is desludging communal latrines in Dougui, and Plan International has distributed 110 WASH kits in Aboutengué, contributing to improved hygiene conditions amid a fragile and rapidly evolving health context.

Cash-based Interventions (CBI)

Between 13 and 26 March 2026, UNHCR and implementing partners delivered multi-sectoral cash assistance totalling XAF 82,775,000 (approximately USD 141,379.70) to 931 individuals and households, aimed at strengthening self-reliance, protection, and shelter outcomes for refugees and vulnerable host community members.

Under the livelihood component, 144 beneficiaries received XAF 7,200,000 (approximately USD 12,297) to support market gardening activities, contributing to improved food security and sustainable income generation. In the shelter sector, 517 households benefited from XAF 47,025,000 (approximately USD 80,318) through the Cash for Shelter programme. Additionally, 270 individuals received Cash for Protection assistance totalling XAF 28,550,000 (approximately USD 48,763) under the Amana Wa Salama project across Goudrane, Touloum, Marassabré, and Oure Cassoni, helping to mitigate protection risks and meet urgent basic needs.

WASH

Water supply across sites in eastern Chad averaged 12 litres per person per day in March, with improved availability recorded in Dougui, Farchana, and Iridimi. Critical shortages persisted in Alacha, Goudrane, Kounougou, and Oure Cassoni, where supply remained below 10 litres per person per day. Progress was mixed across sites: one of three boreholes was completed in Aboutengué (by MSF), while water trucking continued in Iridimi and Goudrane at 460 m³ per day (ACF 200 m³, SI 100 m³, CRT 160 m³), complemented by the installation of fiberglass storage tanks. The potable water network extension to neighbouring host communities reached 50 per cent completion, though progress was hampered by land-related disputes.

Sanitation and hygiene conditions showed moderate overall coverage, with an average ratio of 18 people per latrine, though significant pressure was observed in Oure Cassoni, Touloum, Amnabak, Goudrane, Arkoum, and Goz-Amir. In Kouchaguine-Moura, all 150 targeted households were identified and latrine construction reached 25 per cent completion. Hygiene promotion activities reached 54,375 people through 103 awareness sessions comprising 66 door-to-door visits and 37 mass sessions, driven by strong community mobilization. Despite these efforts, overall hygiene promotion coverage remained limited at 5.3 per cent, underscoring the urgent need to scale up both hygiene promotion and sanitation infrastructure development.

Livelihoods and Self-reliance

In March 2026, agricultural planning was strengthened to support 4,402 households from host and refugee communities, each receiving access to one hectare of farmland. Total production from millet, groundnuts, and sorghum/sesame is estimated at between 3,800 and 4,800 tons, in line with local farming practices and the agro-climatic conditions of eastern Chad.

Concurrently, advocacy efforts were intensified to secure safe and reliable access to farmland. In light of growing land pressure and coexistence challenges between refugees and host communities, discussions were held with local and traditional leaders and technical services to reduce land-related conflicts and support stable, long-term agricultural activities.

EGYPT

Highlights

- In March, UNHCR issued its Year-End Post-Distribution Monitoring [report](#) for 2025, assessing the impact of multipurpose cash assistance (MPCA) provided to approximately 24,600 refugee and asylum-seeker households in Egypt. All respondents indicated that the cash assistance had improved their living conditions and reduced stress, with expenditures primarily directed toward food (88 per cent) and rent (84 per cent), followed by healthcare and education. At the same time, 80 per cent of respondents reported significant recent price increases across essential goods. Despite these challenges, satisfaction with the programme was high. 98 per cent of respondents felt safe receiving and using the assistance, and nearly all beneficiaries reported being well-informed about the programme and aware of available feedback and complaint mechanisms.
- On 4 March, UNHCR [signed](#) a General Cooperation Agreement with AXON Plus to expand access to affordable health care for refugees registered in Egypt. AXON Plus is a digital platform in Egypt run by AXON Healthtech that supports refugees and asylum-seekers by facilitating access to information, services, and assistance through integrated case management and referral systems. The partnership will enable refugees to obtain cost-effective medical services through the AXON Plus digital health platform, linking them to a wide network of private providers nationwide and helping reduce financial barriers to essential care. UNHCR noted that the initiative comes at a time of increasing health needs and constrained humanitarian funding, particularly for refugees with chronic illnesses or specialized medical conditions. AXON affirmed its commitment to inclusive and sustainable health delivery. This collaboration reflects UNHCR's broader efforts to strengthen resilience and promote inclusion by engaging responsible private-sector partners to complement humanitarian assistance and support the well-being of forcibly displaced communities.
- On 11 March, UNHCR and Egypt's National Council for Childhood and Motherhood (NCCM) [signed](#) a Memorandum of Understanding in Cairo to strengthen cooperation in protecting refugee and asylum-seeker children. The agreement aims to improve coordination, expand access to

national child protection services, and establish clearer referral pathways for children at risk of violence, neglect or exploitation. It also includes support for capacity-building and the enhancement of case-management systems, as well as greater use of NCCM's specialized services, such as the Child Helpline (16000). The UNHCR Representative and NCCM President welcomed the partnership, noting its importance in ensuring timely and equitable protection for vulnerable children.

Population Movements and Registration

In March 2026, UNHCR Egypt registered around 9,400 new refugees and asylum-seekers, 80 per cent of whom were Sudanese nationals. Smaller numbers include other nationalities (19 per cent) and Syrians (1 per cent).

Since the outbreak of conflict in Sudan in April 2023, UNHCR Egypt has provided registration appointments to more than 1,042,300 individuals who fled the country. Of these, over 834,400 people (79 per cent) have been fully registered to receive protection and assistance.

As of 31 March, the active registered population of refugees and asylum-seekers in Egypt stood at 1,099,595 individuals, including those who arrived prior to the conflict. Sudanese nationals constitute the largest group at 845,957 individuals (77 per cent), with women and girls accounting for 54.5 per cent of the total registered population.

Protection

Community-based protection (CBP)

In March, 12,512 refugees and asylum-seekers, including new arrivals from Sudan, received information on services, assistance, and procedures for reporting fraud and complaints from outreach community workers at UNHCR's Reception Centre in 6th of October City, Greater Cairo. In addition, over the same period, UNHCR's partner Terre des hommes (Tdh) provided on-the-spot basic psychosocial support to 2,687 individuals, out of whom 144 cases were referred for in-depth psycho-social assessment and another 89 fast-tracked for further urgent assistance. Additionally, UNHCR provided counselling to 325 refugees, including 190 who received in-person counselling, while the rest were assisted through remote sessions.

Prevention and Response to Violence Against Women and Girls (VAWG):

On 29 and 30 March, UNHCR held candle-making and product-marketing workshops at Women-Friendly Spaces, both of which saw strong participation from women entrepreneurs and learners developing new vocational skills. Participants expressed appreciation for the opportunity to strengthen their income-generation prospects and underscored the need for greater visibility and marketing avenues to support the promotion of their products.

On 16 and 1 March, UNHCR's partner delivered a series of empowerment sessions. The activities focused on strengthening women's confidence, decision-making abilities, and financial literacy, including practical skills such as budgeting and savings. Participants highlighted the benefits of peer learning and expressed high satisfaction with the training sessions, noting the continued benefit in supporting women's economic and social empowerment, as well as their interest in additional vocational opportunities and community spaces to showcase their products.

Legal and physical protection (LPP)

In March, 848 individuals received legal counselling sessions through UNHCR and partners, concerning early and late birth registration, filing legal reports, divorce, custody, and legal representation. Additionally, UNHCR provided LPP case management for 165 refugees.

Infoline

In March, UNHCR Egypt's Infoline responded to 9,889 inquiries. Additionally, 861 individuals fleeing the conflict in Sudan secured registration appointments through the Infoline. Since the crisis began, a total of 614,011 people have successfully been scheduled with appointments using this system. It enables refugees to access service information, receive counselling, and book registration appointments in seven languages.

Education

UNHCR and partners continued supporting refugee learners through education information sessions and vocational training. During March, multiple rounds of advising sessions were delivered to refugee students primarily Sudanese, providing guidance to families on school enrolment procedures, required documentation, and available education pathways in Egypt. In parallel, the first round of Technical and Vocational Education and Training (TVET) was launched, offering skills-based training for out-of-school adolescents, including a Makeup and Nails course for teenage girls. Overall, these interventions aim to help refugee students access appropriate education options and strengthen their future learning and livelihood opportunities.

In March, UNHCR continued disseminating scholarship opportunities to refugees and asylum-seekers through social media and community outreach, including master's programme scholarships and [opportunities](#) at the German Hotel School in El Gouna.

Communication with Communities

On 16 March, UNHCR hosted a live social media [session](#) on integrity and complaint mechanisms, taking real-time questions from refugees and strengthening two-way communication with the community. The one-hour session has reached over 93,000 views to date.

LIBYA

Highlights

- On 3 March, [Libya's Anti-Illegal Immigration Agency announced the deportation of 57 individuals](#) through Benina International Airport in Benghazi. The operation involved deporting 51 Sudanese refugees in coordination with the Sudanese consulate in Benghazi. On 5 March, the [DCIM Desert Patrols Department intercepted 36 Sudanese refugees west of Tazirbu](#), including 23 men, 11 women, and two children. They were found in extremely poor health and humanitarian conditions and transferred to Alkufra Detention Centre.
- The Security Registration Card (SRC) centre at the Isolation Centre remains open and operational; however, activity levels are low, reflecting the overall slowdown in security campaigns during the holy month of Ramadan. As a result of limited SRC issuance, Sudanese refugees without SRCs continue to rely on health certificates to facilitate movement between cities along the Alkufra–Ajdabiya route.

Population movements and Registration

91,494 Sudanese refugees were registered with UNHCR at its Tripoli registration center by the end of March

In Alkufra, movement of Sudanese refugees continues primarily via the Chad route, though arrival flows remain constrained by high travel costs, security risks, limited transport options, and reported route closures between Chad and Sudan.

Protection

During March, UNHCR strengthened the provision of legal counselling and awareness services at the UNHCR Registration Centre, reaching more than 160 individuals, including newly arrived Sudanese refugees awaiting registration. Sessions focused on legal rights, common barriers to civil registration, and documentation procedures, with particular emphasis on birth registration for children born in Libya.

In parallel, nine Communication with Communities (CwC) sessions were conducted in reception and waiting areas, reaching 438 refugees. These sessions covered UNHCR services, official communication channels, and mechanisms for reporting fraud and misconduct, strengthening accountability and access to legal assistance among the refugee population.

GBV prevention and response

On the occasion of [International Women's Day 2026](#), UNHCR organized an awareness session under the theme "Rights. Justice. Action. For All Women and Girls." The session reached 18 refugee women and aimed to strengthen their knowledge on GBV, including its forms, associated risks, psychological impacts,

prevention measures, and available reporting mechanisms for sexual exploitation and abuse (SEA). Participants were also informed about UNHCR protection services and referral pathways

Education

In March, local authorities in the East and the Sudanese consulate agreed to coordinate the hosting of Sudanese secondary school examinations in Benghazi, where approximately 2,000 displaced Sudanese refugee students will sit for their exams in mid-April 2026 at the Electrical and Electronic Technical College.

As part of the Community Support Project, the outreach team conducted a focus group discussion at the UNHCR office in Tripoli with Sudanese parents whose children attend public schools in Qasr Bin Ghashir. Parents highlighted rising school supply costs placing significant financial strain on low-income families, alongside documentation challenges affecting displaced children who have lost their papers. Key needs identified included the provision of school desks, repair of classroom windows, and the creation of safe playground spaces. Parents also recommended complementary interventions such as periodic psychologist visits and awareness sessions for teachers on bullying and discrimination.

Shelter and Core Relief Items (CRIs)

UNHCR provided winter assistance to 6,307 Sudanese refugees in Ajdabiya, Alkufra, almarj, Az zawayah, Benghazi, Tobruk and Tripoli. [During Ramadan, distributions continued in Benghazi](#), reaching more than 2,000 Sudanese refugees, [while across Alkufra, Al-Abyar and Ajdabiya, UNHCR supported a further 2,700 people from refugee and host communities facing difficult conditions](#). The assistance included blankets and mattresses, solar lamps, kitchen sets, hygiene and dignity kits, jerry cans, clothing, and other essential items, helping families to sleep, cook meals, store water, and meet their daily needs.

Water, Sanitation, and Hygiene (WASH)

UNHCR donated four mobile latrine units to municipalities in Murzuq, Tazirbu, and Ubari to strengthen sanitation services for refugees and host communities. Each unit comprises six toilets and five sinks, helping to reduce pressure on public facilities in areas frequently accessed by both refugees and host community members.

SOUTH SUDAN

Highlights

- From 16 to 18 March 2026, a three-day ECHO mission took place to Renk and Malakal in Upper Nile State. In Malakal, the mission visited the Malakal Protection of Civilians (POC) site, recently handed over to the government, the Bulukat transit centre, and the Hai Matar area designated for durable solutions. In Renk, the delegation visited the Joda border crossing and engaged directly with new arrivals, as well as the Renk transit centre and Abukadra settlement. The delegation expressed strong satisfaction with the coordination among UNHCR, IOM, and other partners.
- On 6 March, UNHCR in Aweil, in coordination with the Protection team in Juba conducted border monitoring training for Directorate of Civil Registry, Nationality, Passport and Immigration (DCRNPI) focal points from Sudan-border locations. Participants represented Northern Bahr El Ghazal (Majokynthiou, Kiir Adem), Western Bahr El Ghazal (Boro Medina, Raja Town), and the Abyei Administrative Area (Amiet). The training strengthened participants' skills in the use of Kobo tools for systematic and timely border monitoring. While focal point capacities were enhanced, operational challenges related to office infrastructure, power supply, and connectivity persist as barriers to effective border management.
- An inter-agency coordination meeting led by UNHCR, with the participation of sector and sub-sector co-leads and local authorities, was convened to discuss the Renk Area-Based Solutions Strategy. While the draft strategy was reviewed, additional inputs from technical colleagues at the state and national levels are still pending. The strategy is a key document aimed at aligning longer-term solutions-oriented interventions for displaced communities in Renk and the host communities receiving them.
- The UNHCR Country Representative met with the Minister of Interior to discuss sustainable solutions to challenges facing refugees in South Sudan. Discussions focused on improving protection mechanisms, enhancing humanitarian assistance, and strengthening coordination between the Ministry and UNHCR to better support displaced populations. Both sides underscored the importance of collaborative engagement on key refugee-related issues, including access to

basic services, legal documentation, and longer-term solutions such as voluntary repatriation and local integration.

Population movements and Registration

Since the onset of the Sudan conflict in April 2023, approximately 1,362,762 individuals have arrived in South Sudan. A total of 280,229 people arrived in South Sudan during the reporting period.

During the reporting period, 9,839 households (31,602 individuals) entered South Sudan through Renk, comprising South Sudanese returnees (55 per cent) and Sudanese nationals (45 per cent). In contrast, a total of 1,462 individuals exited South Sudan, the majority via the Joda/Wunthou border (1,354 individuals), with a smaller number (108 individuals) using unofficial crossing points. Cumulatively, from 1 January to 29 March, outbound movements through Renk reached 11,691 households (33,229 individuals), highlighting sustained cross-border mobility despite ongoing insecurity.

Protection

UNHCR in Aweil conducted a two-day orientation training at Wedweil Refugee Settlement for 32 newly recruited Hold the Child Organization (HCO) and Commission for Refugee Affairs (CRA) staff. The training covered key topics including the UNHCR mandate, CRI Standard Operating Procedures (SOPs), registration procedures, protection monitoring, community-based protection, accountability to affected populations, and the UNHCR Code of Conduct. The sessions aimed to strengthen staff capacity to effectively engage with new arrivals and manage protection concerns, with participants demonstrating strong commitment to improving service delivery.

During the reporting period, UNHCR partner HCO conducted protection monitoring visits to Wanyjok, specifically at the Machar returnee camp in Aweil East. Findings from focus group discussions indicate that the area hosts approximately 300 households (2,522 individuals) with urgent needs across shelter and NFI support, food assistance, water points, and sanitation. Returnees also reported four snakebite cases, resulting in one fatality and three survivors.

Education

In Maban, Upper Nile, enrolment activities continued across all four camps during the reporting period, though overall progress remains limited as partners await the full rollout of digital registration and expanded community mobilization. Cumulative enrolment stands at 17,142 learners in primary schools, 6,661 in the Accelerated Learning Programme (ALP), and 1,077 in secondary schools. Planned community sensitization campaigns are expected to improve enrolment and retention rates, particularly for girls and older learners who continue to face barriers to accessing education.

The 2025 Certificate of Primary Education (CPE) results reflected strong academic performance across the Maban camps, with refugee schools ranking among the best in the county. A total of 595 candidates sat for the exams (352 male, 243 female), achieving an overall pass rate of 95 per cent. Male candidates recorded a 96 per cent pass rate and female candidates 93 per cent. Doro Camp presented the highest number of candidates, with 364 sitting and 339 passing, while Gendrassa achieved a 100% pass rate among its 56 learners. Batil registered 66 passes and Kaya 103, despite 17 absentee cases. The results indicate improved learning outcomes and strengthened teaching support, though gender disparities in performance and attendance remain.

A comprehensive distribution of teaching and learning materials was carried out across all Maban camps to support learners who had missed earlier allocations, delivering 22,141 exercise books and 9,079 pens to 9,079 learners. Doro received 13,034 books and 5,309 pens, Batil 2,928 books and 1,267 pens, Kaya 3,980 books and 1,631 pens, and Gendrassa 2,199 books and 872 pens. At the secondary level, Al Bunj and Yousif Batil Secondary Schools received 1,882 exercise books, 360 A4 books, and additional teaching supplies. Detailed distribution reports will be finalized in the next reporting period.

UNHCR in Aweil conducted a monitoring visit to Early Childhood Care and Development (ECCD) centres and integrated primary and secondary schools. Enrolment levels were found to be satisfactory, with students paying a registration fee of SSP 15,000 per term. At Salvation Primary School, enrolment stands at 834 learners (356 boys, 478 girls), while ECCD enrolment stands at 550 learners (253 male, 297 female). A two-day needs assessment was also conducted by UNHCR Field Office Aweil in coordination with the Relief and Rehabilitation Commission (RRC), the State Ministry of Education, and the Ministry of Cooperative and Rural Water, to support planned renovations of primary schools and a Vocational Training

Centre under the African Development Bank Group (AfDB) and BMZ funding. The assessed institutions host 1,064 learners (483 boys, 681 girls), including returnees, while the Vocational Training Centre has enrolled 100 students for the 2026 academic year.

In Ajuong Thok, 1,775 primary learners received exercise books and pens to ensure equitable access to learning materials. Dignity kits containing essential hygiene items were distributed to 543 adolescent girls in primary and ALP centres and 622 girls in secondary schools across Ajuong Thok and Pamir, supporting menstrual health, reducing absenteeism, and promoting continued participation in education. Plans are underway to extend this support to additional learners in Pamir, including late enrollees.

Health

Health services in Renk face significant strain from collapsed cross-border systems and ongoing arrivals from Sudan. Access remains limited in remote areas including Atam, Dukduk, Gongbar, Payuer, Awarapiny, and Omdulus, with critical referrals such as dialysis, unable to reach Juba. Key challenges include overstretched staff, stock-outs of essential medicines and HIV test kits, limited WASH and nutrition support, poor mobile coverage and the absence of EPI refrigerators at Kolang primary health care center. Water scarcity has driven populations toward river areas, increasing consultations at Wunthou and Transit Centre health facilities, while Renk Civil Hospital continues to face shortages of anti-malarials and essential antibiotics.

Water, Sanitation and Hygiene (WASH)

In Jamjang, UNHCR and the Action Africa Help International (AAH-I) WASH team held discussions and agreed on measures to strengthen water system management in response to recent water supply shortages across the two camps. The shortages have been driven by changes in weather conditions affecting pump efficiency, as well as increased and diversified competition over borehole water due to the absence of alternative sources for livestock, vegetable production, and construction activities.

As part of efforts to promote resource-sharing and peaceful coexistence between refugee and host communities, UNHCR facilitated the formal handover of five hand pumps drilled in host community settlements in Jamjang. The handover ceremony was attended by UNHCR, CRA representatives, the Jamjang County Commissioner, the Director General of the Ministry of Physical Infrastructure and Water Resources, and community leaders. Both community members and government representatives expressed appreciation to AfDB for funding the project and to UNHCR for its facilitation. Community members also confirmed that a Water Management Committee formed within the community will ensure the hand pumps are managed sustainably.

Shelter and NFIs

In Wedweil, Northern Bahr El Ghazal State, construction of a four-classroom block at Salvation Primary School funded under the AfDB Project is 90 per cent complete. The facility will provide learning space for host community, refugees, and returnee children.

UNHCR in Aweil in partnership with HCO, distributed NFIs to 242 households (1,076 individuals) comprising newly registered refugee arrivals. In Jamjang, 107 newly arrived households relocated from Yida transit centre and Pamir reception centre were supported with 87 pre-constructed emergency shelters upon arrival at the camps.

On housing, land, and property (HLP), the County Commissioner is leading discussions with relevant authorities and community members on the allocation of an additional site for integration. The second phase of integration was noted to also involve refugees.

Livelihoods

In Wau, Western Bahr El Ghazal State, Don Bosco Vocational Training Centre, in partnership with UNHCR and NRC, is implementing a skills training programme targeting 213 youths, comprising 95 refugees, 20 returnees, and 98 host community members. A total of 179 trainees (82 refugees, 79 host community members, and 18 returnees) began training on 9 March 2026, with each participant receiving a monthly stipend of USD 50. Replacement of those who did not report is expected to be finalized by April 2026.

In Aweil, Northern Bahr El Ghazal State, WFP commenced the General Food Distribution for March 2026 at Wedweil refugee settlement, with UNHCR and partners providing support throughout the exercise. To date, 1,263 households (5,708 individuals) have received cash for food assistance.

In Maban, UNHCR completed the surveying and mapping of 4,050 acres of agricultural land across the four refugee camps, comprising 2,050 acres in Doro, 600 acres in Batil, 600 acres in Gendrassa, and 800 acres in Kaya. These sites are now ready for the next phase, which will involve demarcation, boundary marking, and the preparation of internal road layouts to support access and land management.

UGANDA

Highlights

- As of 31 March, Uganda hosted a total of 93,946 Sudanese nationals, including 5,429 Persons with Specific Needs (PSNs) predominantly originating from Khartoum (42,265), South Darfur (14,220), North Darfur (11,378), South Kordofan (4,696), and Al Jazirah (1,581).
- Kiryandongo Refugee Settlement hosted the largest share of this population at 78,957 individuals.

Population Movement and Registration

In March, Uganda registered 837 Sudanese asylum-seekers, of whom 72 per cent were women and children. Eleven individuals were identified as persons with specific needs (PSNs) across multiple vulnerability categories, including unaccompanied or separated children (4), persons with disabilities (3), older persons at risk (3), and children at risk (1).

Protection

Registration

While Kiryandongo Settlement hosts the largest Sudanese population, the number of new arrivals has declined in recent months following the suspension of walk-in registration by the Office of the Prime Minister in September 2025. This trend is further compounded by the preference of some Sudanese to reside in rented accommodation in towns near the settlement rather than within the settlement itself.

GBV prevention and response

Over 230 women accessed the Women and Girls' Safe Spaces (WGSS) in Clusters A, E, and G in Kiryandongo Settlement. Of these, 49 participated in skilling activities, while others received counselling, awareness support, and sessions focused on emotional wellbeing, resilience, and GBV prevention.

Participatory Rural Appraisal (PRA)

During the preliminary phase of project implementation, UNHCR partner the Association of Volunteers in International Service (AVSI) conducted household targeting exercises across selected settlement zones and host communities using the PRA methodology, including a Scorecard Assessment and Participatory Wealth Ranking. The exercise confirmed high levels of economic vulnerability, with a significant proportion of households classified as poor or extremely poor. A strong correlation of approximately 96 per cent was observed between the two assessment tools, demonstrating the reliability of the methodology. Active participation of local leaders, Refugee Welfare Councils (RWCs), and community members enhanced transparency and strengthened community acceptance of the targeting process.

Response Plans and Funding Situation

Regional Refugee Response Plan (RRP) – January - December 2026

The [Sudan Regional Refugee Response Plan 2026](#), launched in February 2026, is an appeal for **USD 1.6 billion** for **123 partners** to provide essential aid and protection to a total of **5.9 million people** in seven countries by the end of 2026. This includes 4 million refugees, returnees, and others who have fled the ongoing conflict in Sudan and over 1.8 million host community members. The Sudan RRP is currently funded at **10%**. Access UNHCR's Refugee Funding Tracker (RFT) [here](#).

UNHCR Sudan Situation Appeal – January - December 2026

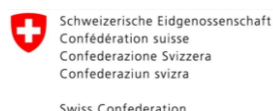

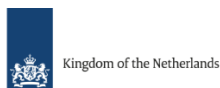

UNHCR's financial requirement for 2026 for the [Sudan situation emergency response](#) – in Sudan and RRP countries – amounts to **USD 929 million**. The appeal is funded at **24%** as of 31 March 2026.
