

SUDAN SITUATION

February 2026

Bachir at her home with two of her children in Gaga refugee settlement, Ouaddaï Province in eastern Chad, where she arrived in 2023 after fleeing war in Sudan with her children. © UNHCR/Hélène Caux

Highlights

- **Sudan:** Armed clashes and near-daily drone strikes continued across Darfur and Kordofan States, affecting multiple towns including Dilling, Kadugli, Bara, El Rahad, and Abu Zabad. In North Kordofan, commercial vehicles and telecommunications infrastructure sustained damage in Tendalti village. Road insecurity along key routes including the Um Rawaba–El Rahad corridor is increasingly disrupting humanitarian access and supply lines in Central Darfur. In late February, an attack on Misteriya in Kebkabiya locality (North Darfur) triggered significant new displacement of over 3,000 people within Kebkabiya locality and caused damage to residential buildings.
- **Central African Republic (CAR):** On 20 February, a high-level government delegation led by the Ministers of Humanitarian Action and Territorial Administration visited Birao to strengthen cooperation with humanitarian partners and reaffirm the Government's commitment to durable solutions for forcibly displaced people and host communities. The delegation engaged with host communities, Sudanese refugees, and Internally Displaced Persons (IDPs) to discuss challenges related to reception, protection, and access to basic services amid continued arrivals from Sudan and visited UNHCR-supported infrastructure, including a health post, water points, and livelihood projects. The visit underscored the need to support local authorities in developing inclusive local development plans that strengthen resilience and foster sustainable refugee integration. Identified by the Government as a development hub, Birao will require stronger partnerships with development actors and predictable, multi-year funding to ensure a comprehensive and sustainable response for both refugees and host communities.
- **Chad:** On 23 February, the Chadian government announced the complete closure of its border with Sudan in response to repeated and reported armed incursions into Chadian territory, citing the need

to prevent the expansion of the conflict, protect the population, and safeguard national integrity. Humanitarian exemptions were granted subject to prior authorization. This decision followed a Rapid Support Forces (RSF) offensive on 22 February against the Sudanese Armed Forces (SAF) in Tina, Sudan, during which the RSF also attacked a post of the Chadian Defense and Security Forces (FDS) across the border in Tiné, Chad. During the clashes, stray bullets struck the premises of the UNHCR's "Guichet Unique," which is one-stop service center for refugees, including the meeting room, which was unoccupied at the time. The closure of the Chad–Sudan border has significant implications for UN agencies and partners, restricting cross-border humanitarian access and supply routes, delaying aid delivery and staff movement, while also limiting refugee inflows, complicating protection monitoring, and increasing pressure on existing sites and already overstretched services in eastern Chad.

- **Egypt:** On 8 February, UNHCR [engaged](#) with the Sudanese Embassy to identify areas for strengthened coordination. Discussions with the Sudanese Ambassador covered access to public services, voluntary return initiatives, and ongoing support programmes, including medical assistance delivered with partners and efforts to streamline documentation processes. On 11 and 24 February, in response to issues raised by the Emergency Fund for Refugee Response (EFRR) and the Refugee Advocacy Group in their respective meetings, the UNHCR Representative outlined ongoing efforts to expand registration capacity, including through digital tools such as the [MyUNHCR](#) platform and reiterated continued engagement with the Government of Egypt as part of the transition to the new asylum law. Both engagements underscored the importance of improved information-sharing, regular coordination, and timely follow-up for individuals with specific protection needs.
- **Ethiopia:** On 27 February, the UNHCR Representative conducted a high-level mission to Assosa, reviewing protection, service delivery, and solutions programming at the Ura refugee site which currently hosts 14,000 refugees. The site follows an integrated settlement approach, whereby services such as schools and health facilities are designed to serve both refugees and host communities, promoting inclusion, strengthening local systems, and supporting early self-reliance.
- **Libya:** On 11 February, UN agencies and representatives from relevant Libyan government ministries held technical consultations on the Libya chapter of the [2026 Sudan Regional Refugee Response Plan](#) (RRP) at the Ministry of Foreign Affairs in Tripoli. The meeting fostered an open and collaborative discussion focused on critical issues such as data management, the impact of the Sudan crisis on Libya, and areas for strengthened UN–government collaboration. Following the consultations, UNHCR received formal feedback from the government and the Sudan RRP was virtually launched on 18 February.
- **South Sudan:** UNHCR South Sudan concluded a joint mission featuring Goodwill Ambassador Kristin Davis, High-Profile Supporter Ann Curry and private donor Rachelle Lopp, focused on the Sudan response, with particular attention to the experiences of women and girls. The visit to Renk and to several projects in Juba aimed to raise the visibility of the crisis and included a PBS NewsHour interview conducted by Ann Curry. A press release featuring Kristin Davis was also published and is available to read [here](#).
- **Uganda:** The security situation in Kiryandongo Settlement, home to the largest population of Sudanese refugees, continued to deteriorate, driven by economic hardship and underlying ethnic tensions, with UNHCR and partners scaling up community-based protection, conflict mitigation initiatives, and livelihood support to ease tensions and enhance social cohesion.

There are now 11.7 million forcibly displaced due to the outbreak of conflict in Sudan since April 2023, including 6.9 million internally and 4.5 million in neighbouring countries. Sudan and neighbouring countries were already hosting large refugee populations before this new emergency and require additional support to provide protection and critical life-saving assistance, including for those who have been secondarily displaced within Sudan. Urgent needs include water, food, shelter, health, and core relief items. The current priority activities are the registration of new arrivals, relocation away from border areas, identification of especially vulnerable families and persons with specific needs, and putting mechanisms in place to prevent and respond to sexual violence and ensure alternative care services for unaccompanied refugee children.

Situation and Operational Response

SUDAN

Highlights

- The Chad–Sudan border crossing at Tina (North Darfur) was closed during the reporting period due to heightened tensions in the border area. The Adre crossing in West Darfur remains open for humanitarian convoys, staff, and fuel; however, bureaucratic impediments are causing delays that are undermining the timely delivery of life-saving assistance to vulnerable populations.
- In Khartoum and Northern States, the security situation remained generally calm, though the operational environment is increasingly complex. A significant influx of returnees is placing pressure on already strained basic services, and deteriorating economic conditions continue to heighten protection risks for affected populations.
- White Nile State remains broadly stable with no major disruptions to humanitarian operations. However, unconfirmed drone strikes reportedly targeted military facilities west of Kosti, and a growing influx of newly displaced persons from the Kordofan States is adding pressure on available services. In Blue Nile State, armed clashes were reported across multiple locations, resulting in damage to a school and residential homes. Civilian displacement was recorded, with some movements observed toward the Ethiopian border.
- In Kassala, tensions escalated on 12 February at the West Airport gathering site, where a landowner and associates destroyed shelters, confiscated water containers, and fired gunshots into the air. UNHCR appealed to authorities to ensure that any site management decisions including planned closures, adhere to inter-cluster guidance and protect affected households. Following the incident, 83 households dispersed within Kassala town, while 28 relocated to the Al Karama (Onion Factory) gathering site. Further site closures are anticipated by April.

Population Movements and Registration

In February, approximately 2,000 refugees and asylum-seekers primarily from South Sudan, Eritrea, and Ethiopia arrived in Sudan. They are currently hosted across White Nile, Blue Nile, Kassala, and Gedaref States.

By end of February, authorities reported that over 30,000 Sudanese nationals had entered Sudan through the Argeen and Eshkeet crossing points in Northern State.

Protection

The North Darfur protection hotline received nearly 70 calls from IDPs and refugees seeking information on food and health service availability, as well as raising concerns about insecurity. Women at Shangil Tobaya IDP camp reported incidents of sexual violence and movement restrictions.

In South and East Darfur, protection teams conducted close to 200 key informant interviews across IDP camps and refugee settlements, identifying gaps in health, WASH, education, and cash assistance. Findings were shared with partners to inform response efforts.

UNHCR trained 54 staff (15 men/39 women) from the Nubia Health Organization, a community-based health provider on Protection from Sexual Exploitation and Abuse (PSEA) in Northern State. The session covered SEA definitions, core PSEA principles, reporting obligations, and survivor-centered support, with active participation from clinical, technical, and support staff.

UNHCR and the Commission of Refugees (COR) continued delivering protection services to refugees and asylum-seekers in Gedaref camps, providing counselling to 120 refugees on documentation, movement, return, resettlement, and food assistance.

Child Protection

In East Darfur, UNHCR and partners visited over 100 unaccompanied and separated children and their foster families across El Ferdous and Kario camps, identifying needs related to shelter conditions and education access. Three group psychosocial support and recreational sessions were held across both sites, reaching 320 refugee children through structured games and sports activities to support emotional wellbeing.

In Kassala State, UNHCR partners delivered assistance and activities for children at the Wad Sharife reception centre and child-friendly spaces in Shagarab, Wad Sharife, and Kilo 26 refugee camps, reaching approximately 570 children through support services, structured activities, and case management interventions.

One at-risk refugee child in Babikri camp, in Gedaref State, received medical care and counselling and was safely reunited with their family.

GBV Prevention and Response

A GBV awareness session was conducted at the Altawidat multipurpose community centre (MPCC) in Sharq Alnil locality, Khartoum State, reaching approximately 150 participants. The session aimed to strengthen community understanding of GBV and the role of families in supporting and protecting survivors.

In North Darfur, a UNHCR partner documented 15 GBV cases, with most incidents occurring along the Tawila–El Fasher road as women and girls travelled to check on their homes. Additional cases were recorded in Sortoni IDP camp and Al Lait refugee settlements. All survivors were referred to for medical care and received psychosocial support.

In East Darfur, 31 GBV survivors were identified across Kario camp and El Ferdous refugee settlement. In Gereida IDP camp, South Darfur, five survivors received psychosocial support and/or were referred to for medical treatment.

Four GBV incidents were reported across refugee camps in Aj Jabalain and As Salam localities, in White Nile State. Survivors received health, medical, psychosocial, and in-kind assistance.

Partners conducted seven awareness and dialogue sessions on bullying, trafficking, and child marriage in Wad Sharife and Shagarab refugee camps, reaching over 100 participants, the majority of whom were women and adolescent girls in Kassala State.

Community-based protection

Multi-purpose community centres (MPCC)

In February, over 9,000 IDPs and refugees accessed protection services and activities through MPCCs across North, East, South, and Central Darfur States. Services delivered by UNHCR, partners, and other providers included GBV awareness sessions, recreational activities, counselling, psychosocial support, referrals, and community-led initiatives.

In Red Sea State, more than 125 forcibly displaced people received counselling at MPCCs in Port Sudan, with referrals provided for cash assistance, food support, and mental health and psychosocial services. In White Nile State, over 700 refugees participated in psychosocial support sessions and community protection activities across Dabat Bosin and Kor Al Waral refugee camps.

Community protection and capacity-building sessions reached more than 350 displaced persons, covering psychological support, life skills, conflict mediation, and community-based dispute resolution in Khartoum and Port Sudan.

Mental Health and Psychosocial Support (MHPSS)

In Khartoum, approximately 40 IDPs and host community members participated in two psychosocial support awareness sessions at the Marabie Al Shreef MPCC in Sharg Alneel locality, focusing on Psychological First Aid and the role of families in reducing psychological distress.

Community-based Protection Networks (CBPNs)

In Kassala State, a UNHCR partner reestablished CBPNs in Shagarab and Wad Sharife refugee camps and provided refresher training to members on identifying protection concerns and safe reporting and referral pathways. Throughout the month, CBPNs delivered over 20 awareness-raising sessions reaching more than 200 participants and identified 21 protection cases, 11 in Wad Sharife and 10 in Shagarab, involving elderly persons at risk, individuals with disabilities or serious medical conditions, and SGBV survivors, all of whom were referred for specialized assistance.

In South Darfur, a UNHCR partner conducted two refresher training courses for 30 CBPN members in Gereida and Buram, covering CBPN roles, reporting, GBV case management, and referral pathways.

Health and Nutrition

In Gedaref State, health facilities served nearly 8,000 outpatients, six of whom required emergency care at Gedaref Teaching Hospital. Nutrition screening identified over 50 children under five with acute malnutrition, including three severe cases, and 10 pregnant and lactating women were flagged as being at nutritional risk.

Across White Nile and Blue Nile refugee camps, health facilities delivered approximately 31,000 outpatient consultations, with around 67% serving refugees and asylum-seekers and the remainder serving host community members and IDPs. The most common illnesses recorded were respiratory infections, malaria, acute diarrhoea, and skin infections. Mental health consultations totalled approximately 300 in White Nile State and 29 in Blue Nile State during the month.

In Gedaref and Kassala States, UNHCR rolled out the Global Distribution Tool (GDT) to strengthen biometric verification and accountability in WFP's cash-based food distribution process, covering the January–February 2026 cycle.

Shelter and non-food items (NFI)

UNHCR partners distributed NFI kits to displaced families across East and North Darfur States, reaching 1,000 families in Khazan Jadeed town and Sha'ria locality (East Darfur), and 2,500 families in Melit, Saraf Omra, and Kutum (North Darfur).

A further 600 NFI kits were distributed to IDP households and newly arrived at the Goz Al Salam site. Kits across all distributions comprised blankets, mosquito nets, solar lamps, plastic sheets, kitchen sets, sleeping mats, and jerry cans.

In Gedaref State, 13 refugee households received core relief items, and 24 households received emergency shelter kits consisting of plastic sheeting and basic construction materials to reinforce or

establish temporary shelters. This assistance addressed immediate household and shelter needs, helping to improve living conditions for the families reached.

Water, Health, and Sanitation (WASH)

Refugees and asylum-seekers in Gedaref and Kassala States received an average of 25 litres of water per person per day in refugee camps, exceeding the minimum standard for daily water provision.

In Kassala State, soap rations were distributed to over 150 newly arrived refugees and asylum-seekers at the Wad Sharife reception centre, and personal hygiene kits were provided to 22 women and girls of reproductive age. In Red Sea State, UNHCR supplied drinking water to the Alsadaga gathering site in Port Sudan, which hosts approximately 167 households.

Partners ensured access to safe drinking water for over 500,000 refugees and host community members in White Nile and Blue Nile States. A one-year supply of water treatment chemicals was delivered to all refugee camps in both states to sustain water quality and reduce public health risks. In Blue Nile, 1.5 km of internal distribution pipelines were upgraded to improve water pressure and reduce queuing, and 50 latrines were desludged, restoring functionality and improving hygiene conditions for approximately 2,500 refugees.

Livelihoods

In Port Sudan, 30 women from IDP and host community households completed practical bakery training at the Alwihda MPCC, delivered by a UNHCR partner with support from the Alwihda MPCC Women's Association. The training aimed to enhance vocational skills and strengthen participants' self-reliance.

In White Nile State, ten Village Savings and Loan Associations (VSLAs) were established across Um Sangour and Khor Al Waral refugee camps to strengthen financial inclusion, promote savings and access to small loans, and support income-generating activities to enhance refugees' self-reliance, enrolling 200 participants (184 women/16 men). Each group received toolkits to support savings, loan management, and financial record-keeping. Complementary livelihood and food security training reached refugees and host community members across both camps: 50 people were trained in fish-catching and sustainable fishery management, 50 in home gardening, and 40 in food drying and preservation techniques, equipping participants with practical skills to strengthen household food security and diversify income sources.

CENTRAL AFRICAN REPUBLIC (CAR)

Highlights

- Despite relative calm in Birao, the security situation across Vakaga, north-east of CAR remained volatile. Reported incidents, including violence involving security forces on the Sikikédé–Mangagne road and intercommunal clashes — reflected a persistently worrying protection environment. Civilians remained highly exposed to physical assault, compounded by the widespread availability of bladed weapons and insufficient community conflict-resolution mechanisms.
- In Korsi, Birao, UNHCR and the Government conducted registration for 100 Sudanese refugees from 30 families originating from Nyala and El Fasher, Sudan, during the last two weeks of February. With fighting in Sudan ongoing and road conditions between Birao and the border improving following the end of the rainy season, additional arrivals are anticipated.

Population Movement and Registration

As of 28 February, CAR hosted nearly 42,000 Sudanese refugees from approximately 13,100 households, an 11 per cent decrease compared to the 47,000 individuals registered as of 15 December 2025. This decline is primarily attributable to a physical verification exercise conducted jointly by the Government and UNHCR in Korsi, following observations of spontaneous departures and prolonged absences over the preceding period.

Protection

UNHCR and its partner *Comité International pour l'Aide d'Urgence et le Développement* (CIAUD) continued protection monitoring in Korsi and surrounding host communities. A joint multisectoral assessment mission was conducted in Am-Dafock, encompassing field visits and community consultations across the villages of Matala, Amkourmaye, Dongoré, Am-Dafock, and Am-Sissiya.

These activities enabled the documentation of 63 protection incidents. Violations of property rights particularly extortion and illegal taxation were the most prevalent, followed by physical assaults and one incident involving loss of life. Most incidents were attributed to non-state armed groups, underscoring the continuing insecurity faced by both refugees and host communities. Geographically, incidents were concentrated in Birao, Ouanda-Djallé, Am-Dafock, and Ouandja, reflecting persistent protection risks across key areas of Vakaga prefecture. Adult men constituted the majority of victims, largely due to their heightened exposure while seeking livelihoods.

In response, UNHCR and partners strengthened monitoring, referral, and advocacy efforts, while reiterating the need to reinforce GBV and child protection services and further support community-based protection structures to enhance prevention and response capacity.

GBV prevention and response

UNHCR and CIAUD continued GBV prevention and response activities across Vakaga prefecture. Reported incidents of violence against women and girls included physical assault, psychological violence, and denial of resources, with many occurring in domestic settings. All survivors received psychosocial support in safe spaces.

CIAUD also conducted community-based awareness-raising sessions on the causes, harmful norms, risks, and reporting mechanisms related to GBV. Strengthening the meaningful engagement of men and boys remains critical to fostering a more inclusive and sustainable community approach to preventing sexual violence.

Accountability to the affected population (AAP)

UNHCR and CIAUD continued to strengthen AAP in Korsi through ongoing feedback collection, referrals, awareness-raising, and complaint follow-up. Feedback received in February was primarily related to WASH and shelter services. All concerns were systematically referred to relevant actors and monitored to facilitate timely and appropriate responses.

Two hygiene awareness sessions were facilitated by community focal points and protection monitors in Korsi, reaching 66 participants (17 men, 21 women, 13 boys, 15 girls). The diverse participation enabled inclusive discussions on individual, household, and community hygiene practices, strengthening participants' understanding of the links between personal hygiene, environmental cleanliness, and the prevention of waterborne and infectious diseases.

Child protection

UNHCR and partners continued child protection activities in Korsi, focusing on children's rights, psychosocial well-being, and social cohesion. Three mobile Child-Friendly Space sessions were held in the Korsi neighbourhood of Birao, providing 135 refugee children (81 boys, 54 girls) with a safe environment supporting their psychosocial well-being and protection.

The participation gap between boys and girls highlights the need to strengthen community outreach and address sociocultural barriers and domestic responsibilities that may limit girls' engagement, with a view to achieving more balanced participation.

Education

UNHCR and its partner the Centre de Support en Santé Internationale (CSSI), in collaboration with the Academic Inspectorate of Vakaga prefecture, continued supporting the integration of refugees into the national education system. French language courses were provided to Sudanese refugee students to prepare them for the Central African education system, where French is the medium of instruction.

Shelter and Non-Food Items (NFIs)

Construction of semi-durable shelters for people with specific needs is ongoing in Korsi. To date, 150 shelters have been completed, providing vulnerable households with safer and more dignified living conditions.

Health and Nutrition

Reproductive health services continued in Korsi, with 318 women receiving family planning, gynecological, prenatal, and postnatal consultations. Twenty-five births were recorded during the period, all assisted by qualified birth attendants at the hospital.

Nutrition screening was conducted for 600 children aged 6–59 months, identifying 68 cases of moderate acute malnutrition (MAM) and 27 cases of severe acute malnutrition (SAM), all of whom received treatment.

CHAD

Highlights

- With armed clashes intensifying across Darfur and Kordofan characterized by ground fighting, artillery shelling, drone strikes, criminal activity, and intercommunal violence, and rising tensions near the Tina crossing along the Chad–Sudan border following the border closure, UNDSS recommended the temporary suspension of all UNSMS movements to Tiné, which was lifted on 2 March 2026 once security conditions were deemed conducive for humanitarian operations. Activities at the Guichet Unique in Tiné, eastern Chad, where new arrivals receive initial screening, health pre-screening, protection assessments, and basic assistance were also suspended. Despite this, Sudanese refugees continued to arrive through unofficial entry points, accessing the transit centre located approximately 5 kilometers from the border, where registration, medical screening, light NFI assistance, and support for persons with specific needs were provided to the extent possible. Following processing, refugees were relocated from the transit centre to safer sites inland.
- Growing insecurity along the border and inland prompted a high-level mission by the Chadian Defense and Security Forces (FDS), led by the Minister of Armed Forces, to eastern Chad, specifically the Ouaddaï region in February 2026. As part of this operation, the FDS initiated systematic household weapons searches across Eastern Chad. UNHCR and humanitarian partners engaged with authorities to define clear operational modalities for any searches conducted within refugee sites, ensuring compliance with protection standards, humanitarian principles, and the safety of refugees and staff.

Population Movements and Registration

Refugee arrivals into Chad continued to rise, with most newly arrived refugees entering through the Oure Cassoni border in Ennedi East (51 per cent), followed by Tiné in Wadi Fira (33 per cent), Adré/Adikong in Ouaddaï (12 per cent), and Sila (4 per cent).

Despite the official border closure, Sudanese individuals continue to cross into Chad. Monitoring teams report a stable but declining trend in arrivals through the Wadi Fira, Ennedi East, and Ouaddaï entry points, where protection partners maintain a presence to monitor, assist, and direct new arrivals.

In February, 4,704 new Sudanese arrivals were recorded in eastern Chad, an 80 per cent decrease compared to the 8,444 arrivals in January. The decline is likely attributable to heightened insecurity along the Sudan–Chad border, marked by armed clashes and drone strikes that are forcing refugees onto longer, unofficial, and more dangerous routes. More than 85 per cent of new arrivals are women and children, and approximately 13 per cent are individuals with specific needs.

The cumulative number of registered refugees since the El-Fasher attack in late October 2025 is now 35,590 individuals (13,292 families).

While most recent arrivals linked to the El-Fasher crisis had previously been recorded in Ennedi East, Wadi Fira, and Ouaddaï, a new influx was reported in February in Ademour, Sila. A joint mission comprising the Commission Nationale d'Accueil de Réinsertion des Réfugiés et des Rapatriés (CNARR), the Red Cross of Chad (CRT), and UNHCR conducted on 20 February confirmed this population movement. Authorities estimate approximately 1,300 new arrivals, mainly women and children from various parts of Darfur are currently concentrated at the Ademour entry point or dispersed within Adé.

Relocation

In February, UNHCR supported the relocation of 7,464 refugees, a 48 per cent increase compared to the 5,046 individuals relocated in January 2026. Movements focused on transferring refugees from insecure border areas to new, former, and expanded sites in eastern Chad, where shelter, water, and sanitation services, aim to ensure dignified living conditions.

The sharp deterioration of security along the Wadi Fira border prompted UNHCR and partners to expedite the relocation of 4,232 refugees to the Touloum site extension. Additional households were relocated to Oure Cassoni (Ennedi East) and the new sites of Dougui and Kouchaguine-Moura (Ouaddaï), with the dual aim of reducing exposure to cross-border threats and ensuring access to essential services.

Since April 2023, UNHCR and partners, with the support of the Government of Chad, have relocated 613,636 refugees from border entry points to safer inland sites, significantly contributing to improved protection and service delivery for newly arrived populations.

Protection

GBV prevention and response

In February, reported GBV cases comprised physical assault (33 per cent), emotional violence (33 per cent), rape (16 per cent), denial of resources (11 per cent), forced marriage (4 per cent), and sexual assault (3 per cent). Survivors received multisectoral support including psychosocial counselling, case management, and referrals to health, legal, security, and justice services. Most alleged perpetrators were unknown to survivors, with many incidents occurring during firewood collection, a daily activity that exposes women and girls to isolated, under-secured areas. Additional cases of sexual and physical violence were reported during flight from Sudan, particularly from areas controlled by non-state armed groups, while other perpetrators included intimate partners and family members.

Prevention efforts intensified across sites and host communities, with partners conducting 34 mass awareness sessions reaching 5,132 people (3,336 women, 565 men, 821 girls, 410 boys). Capacity-building activities included training 19 service providers in Iriba on the clinical management of rape, 60 volunteers across Farchana, Arkoum, and Aboutengué on GBV concepts, 12 peer educators, and the engagement of 54 Engaging Men in Accountable Practices (EMAP) participants on prevention roles and challenges.

As a risk mitigation measure, ecological charcoal was distributed to 1,400 households in Oure-Cassoni in the presence of local authorities, CNARR, UNHCR, and partners RESI Chad and NIRVANA. Each household received six 10-kg charcoal bags, one improved stove, and one cooking bag, aimed at reducing GBV risks linked to firewood collection.

GBV Sub-Working Groups in Ouaddaï, Wadi Fira, and Ennedi East held six coordination meetings throughout February, ensuring consistent information-sharing and harmonized approaches among partners. Key operational challenges persisted, including the absence of dedicated workspaces or listening centers in newly established reception sites, insufficient latrines, inadequate lighting, and a lack of alternatives to firewood, all of which heighten GBV risks for women and girls.

Child Protection

In February, child protection partners continued identifying unaccompanied and separated children, as well as other children at risk, across all refugee reception sites in eastern Chad. In Iriba, a meeting with judicial authorities on 12 February initiated discussions on appointing a focal point to the *Détachement Intégré de Sécurité* (DIS) panel, with the aim of better integrating refugee children into national systems and strengthening the management of children in conflict with the law. Additional consultations focused on preventing child abandonment and infanticide in Wadi Fira, and on establishing an early-warning mechanism.

Key achievements during the month included the following: 286 children (130 girls, 156 boys) were registered with the civil registry, securing legal identity and access to essential services; 724 children at risk received multisectoral support ranging from health and protection assistance to foster placement and school reintegration; protection teams conducted 126 Best Interest Assessments (BIAs) and completed 4 Best Interest Determinations (BIDs); social and recreational activities reached 19,268 children; 134

children received material assistance including NFIs, and clothing; and community volunteers sensitized 5,016 people on child protection, hygiene, and positive parenting.

Capacity-building efforts were reinforced through two targeted trainings. UNHCR and Jesuit Refugee Service (JRS) trained 18 caseworkers in Ouaddaï on Child Protection Case Management and the Best Interests Procedure. A second training held in Iriba from 23 to 26 February brought together 20 participants from JRS, INTERSOS, World Vision, Humanity & Inclusion, CRT, NIRVANA, and the Ministry of Women and Early Childhood. Both sessions aimed to strengthen child protection standards and procedures, improve documentation, enhance consistency of care, and reinforce referral pathways among partners.

Health and Nutrition

In February, the health response in eastern Chad continued to rely on strong coordination between humanitarian partners, UN agencies, and provincial health authorities. Seventeen partners worked alongside UNFPA, WHO, UNICEF, and WFP to support refugee sites. Health facilities recorded 79,046 curative consultations, with the leading morbidities being acute respiratory infections, malaria, and diarrheal diseases. Maternal health services registered 2,709 live births and 2,478 assisted deliveries, while 53 home births mainly in Gozamer, Arkoum, and Marassabré, prompted ongoing community sensitization efforts.

Vaccination and nutrition services showed both progress and constraints. A total of 6,690 children were vaccinated against measles (11,359 since January), representing a 30 per cent increase driven partly by the arrival of new refugees. Nutrition programs admitted 3,617 children aged 6–59 months, including 1,625 with severe acute malnutrition (SAM) and 1,992 with moderate acute malnutrition (MAM), an 8 per cent decrease from January, while persistent supply shortages for MAM continued in Wadi Fira, Ennedi East, and Ouaddaï. Mental health and psychosocial support services assisted 1,272 patients, primarily presenting with epilepsy, chronic psychosis, depression, and trauma-related disorders. An additional 400 patients were referred to secondary care, with trauma-related surgical needs, 56 per cent linked to stab injuries, representing most referrals.

Disease surveillance intensified as measles alerts increased. In Sila province, 257 cases were recorded, including 34 among refugees and two deaths in host communities, prompting plans for a mass vaccination campaign in Koukou district. In Adré, 66 suspected cases were reported, including 11 confirmed. Coordination structures remained active across Ouaddaï, Wadi Fira, and Sila, with progress made on digitalizing the Who is Where, When, doing What (4Ws) mapping tool for mental health services. Partners provided critical support across several areas, from UNFPA's distribution of caesarean kits to WFP's six-month partnership agreements and NGO contributions for maternal care, mental health, and upcoming vaccination campaigns.

Persistent operational gaps include insufficient human resources, limited funding, nutrition supply ruptures, weak logistics infrastructure including ambulances, shortages of mental health specialists, and inadequate laboratory and reproductive health supplies, underscoring the need for sustained investment in staffing, financing, and infrastructure.

Cash-based Interventions (CBI)

In February, UNHCR assisted 317 individuals through education and shelter interventions.

During 2025, a total of 600,803 people including refugees and host community members received support. CBI was deployed across multiple sectors, including Multi-Purpose Cash (MPC), Shelter, Education, Livelihoods, and Voluntary Repatriation (VolRep), and played a particularly central role during the cholera outbreak, with 526,849 displaced people receiving cash to purchase soap.

To assess the impact of this assistance, a Post-Distribution Monitoring (PDM) survey was conducted across 11 refugee sites in four provinces using a representative sample of 3,000 households, predominantly female (85 per cent), mostly children under 18 (61 per cent), and including a notably high proportion of persons with disabilities (69 per cent). Results indicated high overall satisfaction, with strong positive ratings across assistance quality, distribution process, and market functionality, and over 90 per cent of respondents reporting improved living conditions and reduced stress. For future assistance, respondents favoured cash (41 per cent), in-kind support (29 per cent), and a hybrid approach (29 per cent).

WASH

In February, the average water supply across the sites reached 11.5 liters per person per day (l/p/d), which is below the SPHERE emergency standard of 15 l/p/d. Several sites such as Gaga, Marassabré, Koursigué, Kounoungou, Touloum, and Metché registered notable improvements thanks to coordinated WASH interventions. However, in Goudrane and Dougui, the combined effect of new arrivals, relocations, and technical failures temporarily reduced water availability.

Key achievements included major upgrades to water systems: extended standpipes and partial network rehabilitation in Aboutengué; the connection of the Loumba borehole and installation of a 5 m³ tank in Farchana; and improved pumping capacity in Touloum. Additional repairs and system enhancements were completed across Koursigué, Marassabré, Ouré Cassoni, Djabal, and Zabout. WASH partners such as Solidarités International, *Action Contre la Faim* (ACF), the International Rescue Committee (IRC), CRT, and *Cellule de Liaison et d'Information des Associations Féminines* (CELIAF) also contributed significantly through network extensions, standpipe installations, and essential water trucking in Goudrane.

EGYPT

Highlights

- On 17 February, a U.S. Congressional delegation [visited](#) UNHCR's registration centre in Cairo to gain an overview of the humanitarian situation and recent population movements. UNHCR, together with WFP, facilitated a field visit that provided insight into key aspects of the response during the Sudan emergency. The delegation appreciated the opportunity to observe the work on the ground and noted areas of interest related to broader protection and asylum considerations. UNHCR also briefed the delegation on its collaboration with national institutions and engagement with the U.S. Embassy.
- On 9 February, UNHCR and WFP [held](#) a briefing with participation from the UN Resident Coordinator, and many key stakeholders. The agencies noted the increasing humanitarian needs among Egypt's 1.1 million registered refugees in the context of resources and socioeconomic conditions. They underscored growing vulnerabilities across varying sectors. Both agencies called for additional support to sustain essential programmes and emphasized the importance of continued investment in long-term inclusion efforts as Egypt advances toward implementing its first asylum law.
- Throughout February, UNHCR continued its high-level engagement with diplomatic missions to provide briefings on the refugee situation in Egypt and ongoing programmatic and funding priorities. On 3 February, the UNHCR Representative met with the Ambassadors of [Norway](#) and [Saudi Arabia](#) to provide updates on UNHCR's work and current areas of cooperation. Additional engagements included meetings with the Ambassador of [Ireland](#) on 9 February and the Ambassador of [Spain](#) on 11 February to discuss current programming, partnership opportunities, and Spain's continued support through the Spanish Agency for International Development Cooperation (AECID). UNHCR also expressed appreciation for [Italy](#)'s sustained partnership during a separate meeting earlier in the month, particularly in areas related to protection, development, and labour pathways. UNHCR further held a constructive discussion with [Immigration, Refugees and Citizenship Canada](#) (IRCC) on the refugee context in Egypt and the importance of sustained international support.

Population Movements and Registration

In February 2026, UNHCR Egypt registered around 10,200 new refugees and asylum-seekers, 78 per cent of whom were Sudanese nationals. Smaller numbers include other nationalities at 22 per cent.

Since the outbreak of conflict in Sudan in April 2023, UNHCR Egypt has provided registration appointments to 1,038,544 individuals who fled the country. Of these, 822,177 people (79 per cent) have been fully registered to receive protection and assistance.

As of 28 February, the active population of refugees and asylum-seekers registered in Egypt is now 1,098,750 individuals, including those who arrived in Egypt before the conflict, with the following breakdown: 841,477 Sudanese (77 per cent), 149,297 of other nationalities (14 per cent), and Syrians 107,976 (10 per cent). Women make up 54 per cent of the registered population.

Protection

Community-based protection (CBP)

In February, 15,606 refugees and asylum-seekers, including new arrivals from Sudan, received information on services, assistance, and procedures for reporting fraud and complaints from outreach community workers at UNHCR's Reception Centre in 6th of October City, Greater Cairo. In addition, over the same period, UNHCR's partner Terre des hommes (Tdh) provided on-the-spot basic psychosocial support to 3,700 individuals, out of whom 91 cases were referred for in-depth psycho-social assessment and another 83 fast-tracked for further urgent assistance. Additionally, UNHCR provided counselling to 419 refugees, including 210 who received in-person counselling, while the rest were assisted through remote sessions.

Between 1 to 12 February, UNHCR and its partners organized 12 recreational shows for 420 refugee children at the UNHCR Main Building, along with an additional performance for 70 children with disabilities at a refugee-led organization (RLO) in Ard Ellewa and Faisal. These activities provided moments of joy, emotional relief, and positive engagement for refugee children and their families.

On 1 February, UNHCR participated in the launch of the “*English for Empowerment*” research initiative in Egypt, organized by the British Council. The event brought together refugee educators, government officials, youth-focused organizations and international partners. Discussions highlighted how English language skills can strengthen access to services, support inclusion, and expand opportunities for both refugee and Egyptian youth.

Prevention and Response to Violence Against Women and Girls (VAWG):

In February, UNHCR carried out a rapid satisfaction survey to better understand refugees' experiences with case management services in 2025. While most participants of interviews reported feeling treated with respect, the findings highlighted areas where service delivery could be strengthened, including follow-up, information-sharing, and access to available support. UNHCR will use these insights to improve timeliness, information-sharing, and the overall quality of support for survivors.

On 24 February, UNHCR visited a Women-Friendly Space in 6th of October City where an awareness session on VAWG was held. The session was highly engaging and used interactive discussions, icebreakers, and activities to encourage participation. Despite the visit taking place during Ramadan, attendance was notably high, demonstrating the strong interest among women in accessing support, information, and community activities.

On 26 February, UNHCR held a three-day henna drawing workshop. The workshop was led by an instructor who had previously taken part in similar activities and has since become a trainer, demonstrating a meaningful example of skills development and empowerment. The atmosphere was active and welcoming, with participants learning new skills and forming connections.

Child Protection

On 17 February, UNHCR participated in a national [roundtable](#) on legal and policy measures to prevent child marriage in Egypt. The event, organized by Plan International Egypt with national civil society partners, brought together stakeholders to discuss efforts to strengthen protections for girls. UNHCR highlighted the importance of ensuring that refugee girls are included in national prevention and protection initiatives, given their unique circumstances and specific vulnerabilities.

Legal and physical protection (LPP)

In February, 1,371 individuals received legal counselling sessions through UNHCR and partners, concerning early and late birth registration, filing legal reports, divorce, custody, and legal representation. Additionally, UNHCR provided LPP case management for 134 refugees.

Infoline

In February, UNHCR Egypt's Infoline responded to 13,357 inquiries. Additionally, 1,798 individuals fleeing the conflict in Sudan secured registration appointments through the Infoline. Since the crisis began, a total of 613,057 people have successfully been scheduled with appointments using this system.

Education

On 12 February, as part of the Albert Einstein German Academic Refugee Initiative (DAFI) scholarship complementary activities, UNHCR's career-coaching service provider delivered an information session to DAFI scholars on an internship programme for engineering students interested in gaining experience in technology, artificial intelligence, and coding. The session was attended by 11 current and former DAFI scholars.

ETHIOPIA

Highlights

- Despite ongoing security challenges, particularly in the Amhara region, humanitarian actors including UNHCR maintained unrestricted access to refugee sites in both the Amhara and Benishangul-Gumuz regions. UNHCR and partners continued to coordinate closely with local authorities and community structures to mitigate security risks and ensure safe access to services.

Population movements and Registration

In the Benishangul-Gumuz Region, UNHCR has registered 31,971 Sudanese new arrivals since the onset of the conflict in April 2023. No relocation activities took place in February, with the Ura Refugee Site maintaining a population of 14,581 individuals (5,140 households). Level 3 registration reached 11,753 individuals, with progress recorded across Biometric Identity Management System (BIMS), the National Identification Program (NIDP) and Fayda IDs processes.

In the Amhara Region, registration, verification, and documentation activities in Aftit site remain ongoing. As of 28 February, 1,968 households (5,089 individuals) had been verified, 1,598 families had received Proof of Registration (Fayda), and 2,287 individuals had been issued Refugee ID cards.

Protection

UNHCR and partners actively implemented a range of protection interventions across the Amhara and Benishangul-Gumuz regions, including individual and group counselling, community feedback mechanisms, and timely referrals to appropriate services. These efforts aimed to address the specific protection needs of affected populations and strengthen community-based protection systems.

In Amhara, UNHCR and the Refugee and Returnee Service (RRS) conducted community sensitization sessions with the Refugee Central Committee (RCC), covering resettlement processes, fraud prevention, and ongoing advocacy for Refugee Status Determination (RSD) for South Sudanese and Eritrean asylum-seekers. Remote counselling supported 44 families presenting concerns related to mental health, child protection, and registration.

In the Benishangul-Gumuz Region, integrated protection desks provided counselling and referrals to 56 individuals, while preparations advanced for the rollout of the General Distribution Tool (GDT) to strengthen assistance accountability.

GBV prevention and response

In the Benishangul-Gumuz Region, UNHCR and partners continued to strengthen GBV prevention and response efforts throughout the reporting period. Five GBV survivors received comprehensive support, including material assistance and psychosocial counselling. Community engagement remained central to prevention, with 16 SASA! sessions reaching approximately 400 community members through awareness-raising discussions on power dynamics, gender norms, and violence prevention.

A further 596 participants accessed the Women and Girls' Safe Space (WGSS), engaging in structured activities to build skills, strengthen support networks, and enhance wellbeing. Home-to-home GBV awareness initiatives reached an additional 524 individuals, ensuring key messages on protection services and risk mitigation were delivered directly to households, including those with limited access to community sessions.

In the Amhara Region, house-to-house awareness-raising sessions reached 377 individuals with information on protection services and available support, while 80 women and girls accessed psychosocial support and skill-building activities at the WGSS. Community engagement activities also expanded during the period, with Start, Awareness, Support and Action (SASA) sessions engaging 476 community

members on power dynamics, gender equality, and violence prevention. In parallel, EMAP discussions reached 537 men and boys, promoting positive behavioral change and accountability within communities.

Child protection

In the Benishangul-Gumuz Region, child protection activities continued to strengthen identification, case management, and community-based support systems. A total of 68 unaccompanied, separated, and other vulnerable children (UASC/OVC) were newly identified and registered, enabling access to essential protection services, and 32 Best Interest Assessments (BIAs) were completed for children with heightened protection risks.

Follow-up and monitoring remained a core component of case management, with 120 children receiving home visits to assess wellbeing and support ongoing care arrangements. Child-Friendly Spaces (CFS) recorded an average monthly attendance of 1,120 children, providing safe environments for play, learning, and emotional support. To reinforce community-based protection mechanisms, UNHCR and partners trained more than 180 community members and incentive workers on fundamental child protection principles, significantly strengthening local capacity to identify risks and refer cases.

In the Amhara Region, 354 children participated in structured and unstructured CFS activities, while 106 children benefited from group-based psychosocial support (PSS) sessions designed to strengthen emotional wellbeing and coping skills. Community engagement also advanced, with 232 caregivers and community members reached through awareness-raising sessions on child protection, positive parenting, and available support services, contributing to improved community awareness and stronger protection mechanisms for children.

Education

In the Amhara Region, notable progress was recorded across education programming at the Aftit refugee site. Joint coordination meetings with key partners enabled a collaborative review of the main drivers of school dropout and reinforced safeguarding practices within learning environments. Six national teachers were deployed to the site to enhance instructional quality, and 320 refugee secondary school students received essential scholastic materials to support their studies. In addition, 115 refugee and host community youth successfully graduated from Technical and Vocational Education and Training (TVET) programmes across six fields of study, marking meaningful progress in livelihood and skills development.

In the Benishangul-Gumuz Region, education outcomes at the Ura refugee site remained strong during the first semester. A total of 3,374 students were enrolled in formal schooling, with exam attendance reaching 93 per cent and 96 per cent of enrolled students successfully promoted to the next grade level reflecting high levels of student engagement and academic achievement.

Health and Nutrition

In the Benishangul-Gumuz Region, UNHCR's partner Medical Teams International (MTI) continued to deliver essential health services at the Akuda-Tumet Inclusive Health Center in Ura refugee site. A total of 1,749 patients received clinical consultations, 139 pregnant women received antenatal care (ANC), and 55 skilled births were assisted. Nutrition screening identified 11 cases of moderate acute malnutrition (MAM) and 23 cases of severe acute malnutrition (SAM) among children under five and pregnant and lactating women, with all cases admitted to the Targeted Supplementary Feeding Programme (TSFP) and Outpatient Therapeutic Programme (OTP) respectively.

In the Amhara Region, health partners in Aftit continued to provide essential primary healthcare services to crisis-affected communities. A total of 1,948 adult and 799 under-five medical consultations were conducted, alongside 69 Mental Health and Psychosocial Support (MHPSS) sessions addressing stress-related, psychological, and social well-being needs. The leading causes of morbidity remained consistent with seasonal and displacement-related trends, with diarrhoeal diseases, respiratory infections, febrile illnesses, and skin conditions most frequently recorded.

Sexual and reproductive health (SRH) services were prioritized throughout the period, with facilities recording 98 ANC visits, 20 skilled deliveries, 52 postnatal care (PNC) consultations, 73 family planning consultations, and 30 obstetric ultrasounds. Weekly community health promotion sessions reached more than 700 people, focusing on hygiene, disease prevention, and maternal and child health. Nutrition screening was scaled up to cover over 3,000 children under five and pregnant and lactating women, with identified SAM and MAM cases promptly referred to OTP and TSFP programmes for treatment and follow-up.

Shelter, Infrastructure, Site Development, and Core Relief Items (CRIs)

In the Benishangul-Gumuz Region, the second round of CBI disbursements for shelter support continued during the reporting period, with 2,146 of the 2,153 planned households successfully receiving their cash entitlements for semi-upgraded shelter construction and improvement works. In parallel, construction of 160 semi-upgraded shelters is ongoing at the Ura refugee site.

In the Amhara Region, transitional shelter upgrade activities have commenced in Aftit, targeting 98 households. Procurement of required materials is underway to ensure timely delivery, and beneficiary selection is being finalized, marking meaningful progress toward improved living conditions for conflict-affected families in the area.

Water, Sanitation, and Hygiene (WASH)

In Ura (Benishangul-Gumuz), refugees continued to receive reliable access to safe water, with an average supply of 20.1 litres per person per day, exceeding Sphere emergency standards. Water quality and supply continuity remained stable throughout the reporting period. Hygiene promotion teams engaged 856 individuals through structured messaging and household visits, while Environmental Health Agents (EHAs) conducted outreach to 472 households, reinforcing improved hygiene behaviours and environmental sanitation practices. Two community sanitation campaigns mobilized approximately 1,000 refugees in collective clean-up efforts across the site, and five new fenced waste pits were constructed to enhance solid waste management infrastructure and reduce public health risks.

In Aftit (Amhara), water supply operations ensured consistent access to safe water, with an average of 75 m³ delivered per day to approximately 5,155 refugees. Routine chlorination and preventive maintenance of the water pipeline were carried out to sustain water quality and system reliability. Joint sanitation campaigns led with RRS, RCC, and WASH partners mobilized hundreds of refugees in site-wide clean-up operations, while hygiene promotion partners reached 1,357 households with targeted awareness-raising on safe water handling, waste management, and disease prevention.

Food Security

In the Amhara Region, the February General Food Distribution (GFD) in Aftit was successfully completed, reaching 1,689 households (5,030 individuals) and without major operational constraints. In the Benishangul-Gumuz Region, the January GFD reached 1,893 households (8,566 individuals), with the distribution cycle nearing completion and finalization expected in early March. Complementing regular food assistance, Qatar Charity provided Ramadan food baskets to 1,195 vulnerable households, helping to strengthen household food security during the Ramadan period.

Livelihoods

In the Amhara Region, preparations for youth enterprise support are well advanced, with start-up kits fully assembled and ready for distribution pending the completion of the formal legalization process, after which kits will be handed over to selected youth groups to support self-employment opportunities. A Post-Distribution Monitoring (PDM) exercise following earlier goat distributions engaged 250 participants from both refugee and host communities, with findings expected to inform adjustments to future livelihood programming. Government counterparts also received equipment to strengthen institutional service delivery capacity and improve coordination with communities.

In the Benishangul-Gumuz Region, 267 goats were distributed to 89 beneficiaries to strengthen household income generation and resilience, while shelter construction materials were provided to 436 households to support community stability and protection. Infrastructure development works are advancing across multiple locations, including the construction of multipurpose business centres, market facilities, and access roads — investments expected to improve market access, expand economic activity, and enhance community services upon completion.

Energy and Environment

In the Benishangul-Gumuz Region, 10,000 seedlings were procured to support ongoing reforestation and agroforestry initiatives. The associated nursery site was completed and formally handed over following a joint inspection. A Comprehensive Environmental Impact Assessment and a Forest Landscape Management Plan were also finalized and validated in collaboration with government counterparts and partner organizations.

In the energy sector, progress continued on the national grid extension in Assosa, with transformers installed and cabling works underway. Qatar Charity also distributed energy-saving stoves to 42 households, contributing to improved energy efficiency and reduced pressure on local biomass resources.

LIBYA

Highlights

- On 3 February, the Department for Combating Illegal Migration (DCIM) South in Sebha conducted a security operation targeting makeshift shelters inhabited by Sudanese nationals in the Al-Harari area along the airport road. During the operation, approximately 1,350 Sudanese refugees were detained on grounds of alleged irregular stay and lack of documentation. Around 350 individuals were transferred to Al-Shati Detention Centre, while a similar number were moved to Ganfouda Detention Centre in Benghazi; the remaining individuals were taken to Sebha Detention Centre. Fifty families were released two days later. UNHCR subsequently conducted two monitoring visits to Ganfouda Detention Centre and coordinated with the Sudanese consulate to support releases. In Sebha, releases continued throughout the month, with approximately 40 individuals remaining in detention. Community sources report that release procedures require a medical test at a cost of 250 LYD, (approximately USD 50) prior to release. The Benghazi branch of the DCIM [deported 54 Sudanese refugees via Benina International Airport](#), citing enforcement of residency laws and efforts to regulate migration.

Population movements and Registration

90,711 Sudanese refugees were registered with UNHCR at its Tripoli registration center by the end of February.

Recent movement of Sudanese refugees toward Alkufra remained limited and continues to occur exclusively through the Chad route via Rebiana. Tracking movements into Alkufra remains difficult, as groups often travel independently and do not consistently inform the community of their routes or timing. An estimated 40,000 to 45,000 Sudanese refugees are currently living in Alkufra.

In the South, in Sebha, refugee movement continued at a rate of approximately 20 to 25 individuals per day, including women and children, arriving from Chad. While some refugees stop in Al-Qatroun, others proceed to Murzuq and Um Al Aranib. Overall, movement in the South was limited during the reporting period, which is believed to be linked to intensified clashes along the border areas.

Protection

In February, UNHCR, through its local partner Moomken, initiated legal counselling services for refugees facing legal and administrative challenges. The support included legal awareness sessions on accessing civil registry documents, particularly important for survivors of violence and abuse as well as information on obtaining legal residency in Libya. The first two sessions, held at UNHCR's registration centre, reached 49 refugees, mostly Sudanese nationals. A subsequent session on civil registry documentation and legal residency permits reached around 133 refugees, the majority also Sudanese. During this session, over 30 refugees reported difficulties in accessing the civil registry and requested additional legal counselling, particularly regarding birth certificates. As a follow-up, a dedicated legal session will be organized for this group to facilitate their access to civil registry services, and individuals requiring additional support were assessed to identify their specific legal needs and provide tailored assistance.

On 2 February 2026, UNHCR met with the newly appointed mayor of Alkufra at the Benghazi UN Hub and briefed him on UNHCR activities, including assistance distribution processes and the share of host community members supported. The mayor outlined his vision for revising the distribution strategy and emphasized the importance of including Sudanese refugees with professional backgrounds—such as doctors, teachers and skilled workers—in community initiatives. UNHCR also visited the isolation centre in Alkufra, where International Medical Corps (IMC) and the International Organization for Migration (IOM) provide medical consultations and essential medicines. Sudanese refugees were able to access the facility and attend their scheduled follow-up medical appointments.

GBV prevention and response

In February, the intake desk at UNHCR's registration centre in Tripoli received 209 cases involving Sudanese refugees, including reports of sexual violence and other forms of abuse. Many of those referred were assessed and counselled on safe movement and available services, and remote case management was initiated for 32 individuals to provide ongoing support.

To complement these efforts, UNHCR continued delivering comprehensive prevention and response services to survivors of sexual violence and abuse. During the month, 14 survivors received psychosocial support (PSS), ensuring access to a safe and confidential environment to process trauma, strengthen coping capacities and rebuild resilience through tailored support plans and close case-management follow-up.

Education

In February, implementation of the Ministry of Education's exemption of residency requirements for Sudanese refugee students to access education remained inconsistent. Some Libyan public schools continued to insist on residency as a condition for enrolment, examinations and certification. Families with the means to enrol their children in Sudanese community schools (at 500 LYD per year/approximately USD 80) expressed satisfaction, while others faced ongoing uncertainty.

In addition, the Sudanese community in Alkufra raised concerns about students needing to travel to Benghazi to sit for official exams at the Sudanese Consulate, as no local examination services are available. The community faced similar challenges last year, when plans to open a Consulate office in Alkufra did not materialize. Families reported that travel costs and the risk of arrest or detention during the journey remain major barriers.

The east-based foreign affairs minister met with the Sudanese Consul General to discuss support for Sudanese schools in eastern Libyan cities, organizing secondary certificate exams for nearly 2,000 Sudanese students in Benghazi, and strengthening cooperation to address humanitarian and educational needs.

Shelter and Core Relief Items (CRIs)

In February, UNHCR provided winter assistance to 1,410 Sudanese refugees in Ajdabiya, Tobruk and Tripoli. Refugees received winter clothing, tarpaulins, footwear and sleeping mats to help them cope with harsh weather conditions. In addition, essential household items, including mattresses, blankets, baby kits, hygiene kits, solar lamps, kitchen sets and jerrycans, were distributed to help families sleep more comfortably, prepare food and maintain personal hygiene. This assistance is critical to restoring dignity and improving living conditions.

Water, Sanitation, and Hygiene (WASH)

On 12 February, in coordination with east-based health authorities, UNHCR [handed over](#) three fully equipped ambulances. This support will enhance emergency medical response and improve access to life-saving services for both refugees and host communities in eastern Libya, strengthening the capacity of first responders to deliver timely care in high-risk areas. In addition, on 10 February, UNHCR handed over medical equipment to the Libyan Red Crescent branch in Sabratha (western Libya), including two otoscope–ophthalmoscope sets and an ultrasound machine. This support aims to strengthen emergency response for vulnerable Sudanese refugees in urban areas, ensuring that diagnostic tools are available when and where they are most needed.

SOUTH SUDAN

Highlights

- On 14 February 2026, UNHCR Jamjang held a meeting with Médecins Sans Frontières (MSF) Holland to brief them on the current humanitarian situation and operational priorities in Jamjang and Bentiu. The MSF delegation was led by Emergency Coordinator, Tuna Turkmen, and Health Coordinator, Jethro Guerina, with participation from the Bentiu-based team. UNHCR highlighted that health service provision in the Jamjang refugee camps remains critically limited due to challenges related to the Health Sector Transition Plan (HSTP). The engagement strengthened coordination with MSF Holland and provided an overview of critical needs particularly in health, the ongoing influx of new arrivals, and coordination arrangements for Rotriak. It was agreed to enhance information sharing to better inform MSF's operational decision-making.
- The UNHCR Deputy Representative undertook a two-day mission to Aweil from 5 to 6 February 2026 to assess field operations and engage with key partners and authorities. The mission included field visits to priority host communities and refugee settlement facilities in Wedweil, followed by discussions with local stakeholders and refugee representatives. In Aweil town, the Deputy Representative paid a courtesy call on the Governor of Northern Bahr El Ghazal State and

met with the Relief and Rehabilitation Commission (RRC) Chairperson as part of ongoing coordination efforts. During the meeting, the Governor expressed appreciation for the visit and encouraged strengthened collaboration between UNHCR and the State Government to improve living conditions for refugees and support host communities.

- A delegation from Inkomoko, led by its South Sudan Managing Director, conducted a familiarization and stakeholder engagement mission to Jamjang to prepare for expanded 2026 programming. Inkomoko is a social enterprise that supports refugees and host community entrepreneurs in Africa through business training, access to finance, and market linkages to help them grow sustainable livelihoods. The team met with UNHCR, local authorities, and visited Yida Settlement, Pariang County to assess the operational context. Planned interventions will support 1,300 individuals (70 per cent refugees and 30 per cent host community members) across Ajuong Thok, Pamir, Yida, Maban, and Juba, prioritizing youth aged 18–35 including persons with disabilities. The mission strengthened coordination for youth-focused livelihood, financial inclusion, and market linkage programming to enhance self-reliance among refugees and host communities.

Population movements and Registration

Since the onset of the Sudan conflict, approximately 1,343,723 individuals have arrived in South Sudan. As of 28 February, 67 per cent of the arrivals were South Sudanese returnees and 32 per cent Sudanese refugees, with the Joda/Renk border remaining the most popular entry point, accounting for 68 per cent of all entries. A total of 276,388 people had arrived in South Sudan.

During the reporting period, 6,760 households (21,078 individuals) entered South Sudan through Renk, comprising South Sudanese returnees (72 per cent) and Sudanese nationals (28 per cent). A total of 2,372 individuals departed South Sudan during the period, with 1,973 departing via the Joda/Wunthou border and 399 through unofficial crossing points. Cumulatively, from 1 January to 28 February, total outbound movement through Renk reached 8,227 households (23,196 individuals).

Relocation

On 10 February, 356 returnees (123 households) received onward transportation assistance via boat from Renk to Malakal, from where they will be supported to reach their final destinations in Wau, Rubkona, and Juba.

Protection

UNHCR in Aweil, Northern Bahr el Ghazal State, with support from Hold the Child (HCO), profiled 165 households comprising 681 self-relocated refugees (309 males and 372 females), including 179 children under five and 25 persons with specific needs. The new arrivals entered through the border points of Majokynthiou, Abyei, Boro-Medina, and Kiir Adem in Northern Bahr el Ghazal State. The team provided information on available services, documentation procedures, and other relevant support at Wedweil Refugee Settlement.

In Aweil, Northern Bahr el Ghazal State, UNHCR continues to coordinate refugee registration at Wedweil Refugee Settlement (WRS) in collaboration with the Commission for Refugee Affairs (CRA) and partner Hold the Child (HCO). During the reporting period, 104 households comprising 397 refugees were registered and documented.

Education

In Maban, Upper Nile State, education partner Lutheran World Federation (LWF) distributed 29,011 exercise books to 8,578 learners (4,413 boys, 4,169 girls) across four refugee camps to strengthen the learning environment and ensure access to basic scholastic materials. Additional teaching and learning supplies were also provided to support classroom delivery and school administration.

In Jamjang, attendance across 10 primary schools increased significantly, driven by sustained mobilization efforts by Parent-Teacher Associations (PTAs) and community leaders. Alternative Learning Programme (ALP) centres recorded marked improvement, with attendance rising from 33 per cent to 60 per cent. On 26 February, 41 ALP learners (24 girls, 17 boys) at the Kings of Nuba ALP Centre each received books and stationery to support their studies. All secondary schools similarly reported increased enrolments.

The cash support programme for students in Jamjang schools concluded successfully during the reporting period. In the final distribution week, 3,062 refugee students and 167 host community students received

cash assistance. Since the programme's launch on 23 January 2026, a total of 11,930 refugee students and 1,515 host community students benefited overall, with the assistance helping to alleviate household financial pressures and sustain access to education for both refugee and host community children.

All schools in Jamjang camps officially reopened for the 2026 academic year on 2 February, per the directive of the Director of Primary and Secondary Education at the Area Ministry. The first week was dedicated to learner registration and enrolment across both camps, with classroom instruction commencing the following week. In line with guidance from the Ministry of General Education and Instruction (MoGEI), all schools registered both continuing and new learners simultaneously, ensuring coordinated access to education for refugee children.

Health

UNHCR and the Maban County Health Department convened the first monthly health, nutrition, and WASH coordination meeting at the UNHCR office. Discussions focused on partner updates and aligning activities with the Maban 2026–2028 strategy to strengthen local healthcare and WASH systems for refugees and host communities. The meeting will be held monthly as a key platform for enhanced coordination and responsive service delivery within South Sudan's complex health landscape.

Water, Sanitation and Hygiene (WASH)

In Maban, Upper Nile State, UNHCR WASH partners ensured water delivery across all four camps during the reporting period. Daily supply levels stood at 9 litres per person per day (l/p/d) in Doro, 13 l/p/d in Gendrassa, 10 l/p/d in Yusuf Batil, and 12 l/p/d in Kaya. While these levels remain below the Sphere standards, supply ensured basic access for drinking, cooking, and hygiene. Through community-driven sanitation initiatives, 134 new household latrines were constructed across the four camps, enhancing sanitation conditions and empowering communities to take an active role in hygiene practices.

In Jamjang, Pariang County, UNHCR, partners, and refugee community leaders completed a general soap distribution across the camps from 24–27 February, reaching 17,386 households (94,777 beneficiaries). Refugees expressed appreciation for the assistance, particularly noting the relief for women and schoolgirls following months without soap distribution.

In Pamir, Pariang County, UNHCR and Action Africa Help International (AAH-I) WASH teams initiated construction of 100 emergency communal latrines at blocks 61 and 62 to ensure safe sanitation access for new arrivals, following delivery of essential logs and poles by the local authority supplier. In addition, two shared latrines for persons with specific needs (PSNs), supported by the Korea International Cooperation Agency (KOICA), were constructed in the same blocks to serve the most vulnerable new arrivals.

Shelter and Core Relief Items (CRIs)

In Aweil, a total of 38 households (190 individuals) received full CRI kits comprising blankets, sleeping mats, mosquito nets, kitchen sets, buckets, collapsible jerrycans, and solar lamps, including 20 households (98 individuals: 37 men and 61 women) supported by UNHCR. In addition, 112 households (587 individuals) received sleeping mats, with 57 households (300 individuals) covered to address stock shortages from January and 55 households (287 individuals) receiving complementary assistance.

UNHCR and partners provided emergency shelter and CRIs to new arrivals from Yida transit and Pamir reception centres through multiple distributions. A total of 532 households (1,439 individuals) received 501 emergency shelters and family tents, alongside five transitional shelters for persons with specific needs, supporting 11 highly vulnerable individuals with improved protection and dignified accommodation.

Settlement planning activities supported the allocation of 525 shelter plots, including 141 re-demarcated plots and the maintenance of 4 kilometers of access roads linking Jamjang town to Ajuong Thok. CRI distributions further reached 730 households (2,157 individuals) with essential items, including sleeping mats, blankets, mosquito nets, jerrycans, buckets, and soap.

Cash Assistance

UNHCR in Maban has begun updating the CBI beneficiary lists in preparation for upcoming livelihood and community empowerment cash distributions targeting 1,344 households. In parallel, UNHCR Camp Coordination and Camp Management (CCCM) in Maban supported Humanity & Inclusion to deliver

multipurpose cash assistance to 400 persons with disabilities, including refugees and host community members providing each beneficiary with 270,000 South Sudanese Pounds (USD 50).

Livelihoods

UNHCR Maban (Bunj Sub-Office) completed the surveying and mapping of 4,050 acres of agricultural land across the four refugee camps in Maban, comprising 2,050 acres in Doro, 600 acres in Batil, 600 acres in Gendrassa, and 800 acres in Kaya. The surveyed areas are now ready for the next phase, which will include plot demarcation, boundary marking, and the preparation of internal road layouts to support access, land management, and organized cultivation.

UNHCR Maban initiated community consultations focused on establishing transparent and equitable criteria for plot allocation ahead of the upcoming farming season. Engagements with camp leadership and community representatives emphasized inclusive decision-making. Agricultural land will be managed through a block farming system coordinated by community Sheikhs and Umdas to promote organized cultivation and shared resource management.

UNHCR, the Commission for Refugee Affairs (CRA), refugee leaders, refugee traders, and host community representatives, participated in the Norwegian Refugee Council (NRC)-led consultation to introduce three proposed livelihood projects in Wedweil Settlement: bread baking, oil production, and bar soap production. The consultation resulted in agreement to name the bakery “Wedweil Bakery,” designate the Women’s Centre for bread and oil production, and allocate the Youth Centre for soap production. NRC will provide production materials for the initial two-week period, construct dedicated facilities (four-partition concrete structures at the Women’s Centre and iron-sheet structures at the Youth Centre), and deliver training to recruited staff. The projects will operate under refugee leadership through a seven-member Bakery Management Committee, supported by an operational team overseeing day-to-day activities. Implementation will commence upon completion of facility construction by NRC.

In partnership with Relief International, UNHCR Maban launched a call for Expressions of Interest to expand livelihood opportunities targeting at least 4,000 refugee households. The initiative prioritizes business development, agricultural production, and climate-smart agriculture, with a commitment to ensuring that women comprise at least 60% of beneficiaries. The programme aims to strengthen household resilience and promote sustainable income-generating opportunities across Maban.

UGANDA

Highlights

- As of 28 February, Uganda hosted a total of 93,383 Sudanese nationals, predominantly originating from Khartoum (42,270), South Darfur (14,048), North Darfur (11,330), South Kordofan (4,537), and Al Jazirah (1,573).
- Kiryandongo refugee settlement accommodated the largest share of this population, hosting 78,957 Sudanese nationals. To note, university-level education was the most reported qualification among the registered population, with 24,934 individuals holding a degree.

Population Movement and Registration

In February 2026, Uganda registered 261 Sudanese individuals, comprising 172 refugees and 89 asylum-seekers, the majority of whom were women and children.

Protection

Refugee Status Determination (RSD)

On 5 February 2026, the Government of Uganda issued a directive lifting prima facie refugee recognition for new asylum-seekers from Sudan, the Democratic Republic of Congo, and South Sudan, transitioning to individual RSD procedures. The Government clarified that the decision is not intended to alter Uganda’s open-door policy, and that individuals previously granted refugee status will retain their protection in accordance with national law and Uganda’s international obligations.

UNHCR was formally notified of the directive and continues to engage closely with the Office of the Prime Minister (OPM) to support its implementation in line with Uganda’s legal framework and protection commitments. Asylum-seekers are now registered, issued asylum-seeker certificates, and relocated to settlements to access basic services pending the outcome of their individual status determination.

Voluntary Return

On 20 February, the Embassy of Sudan in Uganda facilitated the repatriation of 128 Sudanese nationals to Khartoum. The group comprised 125 refugees and three members of the Higher Committee of Voluntary Return, with the flight prioritizing individuals with chronic medical conditions.

Legal and physical protection (LPP)

Peace mentors convened to review emerging conflict trends in Kiryandongo settlement, identifying key drivers including parental neglect, ethnic tensions, high adolescent school dropout rates, reports of covert youth violence training, and increasing land-related disputes. Participants emphasized the need for structured follow-up actions to strengthen community-level conflict mitigation mechanisms.

Child Protection

During a monitoring visit to a children's remand facility in Kiryandongo, more than 10 children in conflict with the law were identified, with cases including one murder and ten aggravated robbery charges. Four boys were reported to have escaped from the facility, and their whereabouts remain unknown. Assessments for identified cases have commenced to inform case management plans aimed at supporting their wellbeing during remand and facilitating future reintegration.

Water, Sanitation and Hygiene (WASH)

In Kiryandongo, functional handwashing coverage stood at 41.5 per cent across a refugee population of 165,909, reflecting ongoing challenges in access to soap and water at handwashing points. A total of 20 open defecation sites were identified across clusters, highlighting persistent gaps in sanitation practices. Addressing these gaps will require strengthened follow-up, sustained community sensitization, and the provision of supportive materials such as slabs and latrine digging tools to improve sanitation uptake.

Response Plans and Funding Situation – 28 February 2026

Regional Refugee Response Plan (RRP) – January - December 2026

The [Sudan Regional Refugee Response Plan 2026](#), launched in February 2026, is an appeal for **USD 1.6 billion** for **123 partners** to provide essential aid and protection to a total of **5.9 million people** in seven countries by the end of 2026. This includes 4 million refugees, returnees, and others who have fled the ongoing conflict in Sudan and over 1.8 million host community members. The Sudan RRP is currently funded at **10%**. Access UNHCR's Refugee Funding Tracker (RFT) [here](#).

UNHCR Sudan Situation Appeal – January - December 2026

UNHCR's financial requirement for 2026 for the [Sudan situation emergency response](#) – in Sudan and RRP countries – amounts to **USD 929 million**. The appeal is funded at **21%** as of 28 February 2026.
