

Lebanon: Flash Update #41

Escalation of Hostilities in Lebanon

As of 06 July

This report is produced by the OCHA Lebanon Office in collaboration with the Inter-Sector Coordination Group under the 2026 Lebanon Response Plan (LRP) Framework

KEY FIGURES

Total displaced
(IDPs)

499,784

(DRM, LRC, IOM)

Displaced in
collective shelters

37,000

(DRM)

Shelters

354
(DRM)

People killed

4.3 K

(MoPH)

People injured

12.2 K

(MoPH)

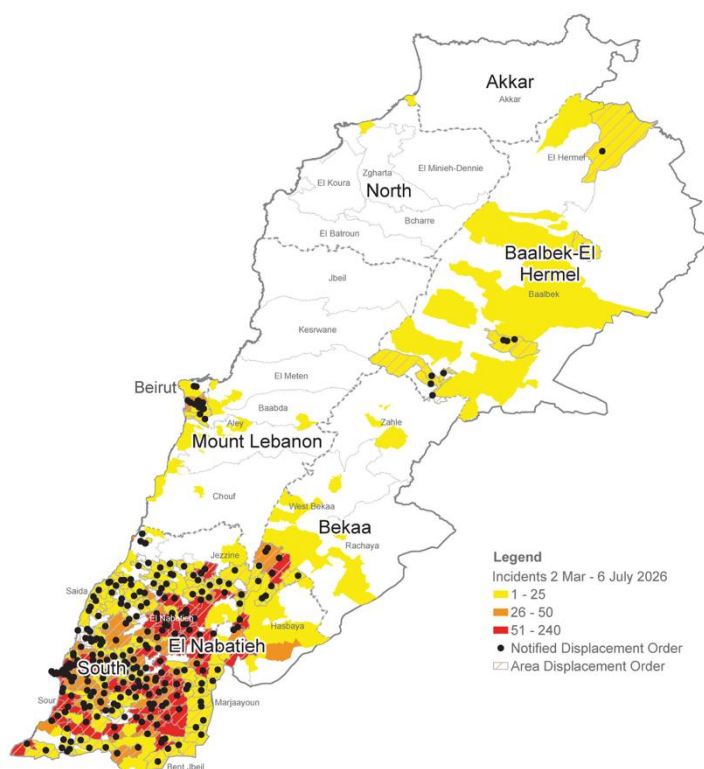

HIGHLIGHTS

- At least 4,319 deaths and 12,203 injuries due to hostilities recorded by the Ministry of Public Health since 2 March.
- 646,107 people have returned to their areas of origin, while around 500,000 people remain displaced, including 37,000 Internally Displaced Persons (over 53 per cent women and girls) in 430 collective shelters as of 6 July.
- Basic services in hard-to-reach areas are under enormous strain or are non-functional. Nationwide, 3 hospitals and 35 PHCCs are non-operational, with access to lifesaving services particularly challenging in conflict-affected areas.

SITUATION OVERVIEW

Ongoing military activity, despite an overall decline in the intensity and reach of hostilities, continues to pose risks to civilians, hinder safe return, and prolong humanitarian needs among people in Lebanon. Israeli military airstrikes, demolitions, and localized military operations in South and Nabatieh governorates persisted throughout the reporting period. Though the security environment has notably improved since the most recent ceasefire announcement, continued military activity in the south perpetuates further protection risks, prolongs displacement for those seeking to return, and further drives humanitarian needs throughout the country.

Population movements continue to shift rapidly. Between 2 and 6 July, the number of people residing in collective shelters declined by over 10,000 (21.5 per cent), from 47,143 people in 430 shelters to 37,000 people in 354 shelters. As of 2 July, the DTM recorded 646,107 returnees, an increase of 123,000 people returning (23 per cent) since 25 June, with most returns occurring in South and Nabatieh governorates. Despite rising return numbers, return movements

The boundaries and names shown and the designations used on this map do not imply official endorsement or acceptance by the United Nations.

remain fluid, cautious, and often reversible as families evaluate the extent of damage, safety conditions, and access to essential services. Continued support for **basic services, shelter, unexploded ordnance (UXO) clearance, and early recovery** remain essential to sustain safe and dignified returns.

Displacement levels have declined over the last two weeks but remain significant, with 499,784 people still displaced. While returns continue, many households remain unable to return safely due to inaccessibility, insecurity, widespread housing damage, and strained or destroyed essential services in areas of origin, resulting in sustained or repeated displacement and increased strain on host communities. Alongside dignified shelter, food security and water, sanitation and hygiene (WASH) needs, displaced populations are facing declining economic capacity to maintain current housing arrangements, lack or loss of civil documentation hindering service access, and growing MHPSS needs, heightening protection concerns as displacement becomes increasingly prolonged.

Collective shelter populations have continued to decrease; however, displacement remains concentrated in a few governorates. Beirut continues to host the largest share of displaced in collective shelters, with 14,700 people across 73 shelters, despite a reduction of 3,835 people in collective shelters over the reporting period. South and Nabatieh governorates together host approximately 9,730 people in 70 shelters and remain key areas of displacement. At the same time, new, longer-term collective shelters are being established, particularly in the South and Nabatieh governorates, reflecting the needs of households currently unable to return, or experiencing secondary displacement.

Basic services in hard-to-reach areas are non-functional or under critical strain. According to WHO, three hospitals in the Israeli-declared military area remain non-operational: Bint Jbeil Public Hospital and Salah Ghandour Hospital in Bint Jbeil district (Nabatieh) and Salah Ghandour Hospital in Marjaayoun (Nabatieh). Those seeking services in operational hospitals in these areas face critical access constraints as hospitals continue to encounter challenges in fully reinstating lifesaving services, such as maternity care. Furthermore, the Ministry of Public Health reports that 35 Primary Health Care Facilities (PHCCs) are closed countrywide, 11 within the Israeli-declared military area, creating further barriers to accessing health services and heightening strain on remaining PHCCs. Continued displacement dynamics, fluid shelter populations, access restrictions, and attacks on healthcare are complicating the continuity of services, especially in hard-to-reach areas.

The Ministry of Public Health **reported 4,319 people killed** (including 392 Women and 253 children) and **12,203 injured** (1,450 women and 1,036 children) as of 6 July. **135 health care professionals have been killed on duty and 406 reported as injured** since 2 March.

Funding constraints remain a major challenge to sustaining humanitarian assistance. As of 6 July, the 2026 Lebanon Flash Appeal has received \$269 million, or 42.2 per cent of the \$639.9 million requested.

HUMANITARIAN RESPONSE

Humanitarian partners continue to deliver a coordinated, multi-sector response across Lebanon despite ongoing insecurity, repeated displacement, access constraints, and significant underfunding. Assistance remains focused on the most vulnerable conflict-affected populations, including displaced households living both inside and outside collective shelters. Response activities include multi-purpose cash, food assistance, health care, nutrition services, protection interventions, education support, shelter assistance, WASH services, and site management, with particular attention to women and girls, children, persons with disabilities, older persons, and households facing multiple vulnerability factors.

Humanitarian partners continue to adapt to a highly dynamic operational environment, as the security situation, access, patterns of displacement, and returns remain fluid. Nutrition Partners have screened 25,00 children under five and 5,044 Pregnant and Breastfeeding Women (PBW) for wasting, identifying 947 PBWs and 749 children for referral, enabling the early identification of individuals requiring further nutrition support and treatment. Food Security partners reported an additional 300,000 hot and cold meals provided over the past week and over 2,000 ready-to-eat kits distributed for displaced households. Additionally, 3,342 vulnerable households received a one-off USD 250 cash-for-shelter assistance to cover urgent shelter costs, including minor repairs, rent, and utilities.

The response is being reinforced through inter-sector coordination, ongoing needs assessments, and additional humanitarian financing secured under the revised Flash Appeal. Humanitarian actors continue to operate in a challenging environment marked by insecurity, access restrictions, and population movements, while utilizing established civil-military coordination mechanisms to reach conflict-affected and hard-to-reach areas, including humanitarian notification system (HNS). Partners remain focused on sustaining life-saving assistance, addressing protection risks, and supporting safe, dignified, and informed decisions for displaced populations as the situation continues to evolve.

Multi-Purpose Cash Assistance (MPCA)

Cash Working Group (CWG) partners continue to mobilize resources for the emergency response while closely monitoring market conditions and displacement trends to ensure that cash assistance remains feasible, responsive, and targeted to the most vulnerable populations outside collective shelters. **To date, close to 839,000 conflict-affected individuals have received at least one tranche of Emergency Multipurpose Cash Assistance (EMPCA).**

Data to support the targeted phase of the Shock Responsive Social Safety Net (SRSN) response is expected to be shared this week, enabling the disbursement of the second and third payment cycles and ensuring continued assistance to the most vulnerable conflict-affected Lebanese households

To strengthen reporting quality and consistency across partners, the Cash Working Group conducted a reporting training on 30 June for implementing partner focal points. The session covered MoSA SRSN reporting templates, including redemption and process-related reporting requirements, as well as CWG reporting on ActivityInfo, with a focus on the Daily Escalation Reporting Form and recent system modifications. Partners were reminded to report all emergency cash interventions through the Daily Escalation Reporting Form and to update previously submitted records. To support partners in meeting reporting requirements, the CWG also developed and disseminated a reporting user guide. The training was recorded and shared with sectors and partners to facilitate ongoing reporting efforts.

Education

As displaced families continue to leave collective shelters, **354 shelters remain open across Lebanon, of which 244 are educational facilities: 189 public schools, 31 private schools, and 24 technical institutions.** Education Sector partners continue to support displaced children. As of 6 July, **partners have reached 88,850 displaced children through formal education and a further 5,528 through non-formal education pathways.** To support learning at centres and in shelters, 2,560 education kits have been distributed, individual student kits or learning materials provided to 2,020 children, and 157 children with disabilities supported through assistive devices or rehabilitation services.

Under the Ministry of Education and Higher Education's (MEHE) emergency response, safe school readiness and emergency learning programme, the summer will focus on school reinstatement ahead of the 2026/27 school year. For schools used as shelters, MEHE is preparing a **decommissioning, and reinstatement needs assessment covering 356 schools**, though a significant funding gap remains. In parallel, based on MEHE's nationwide Attacks on Education assessment, **340 schools were damaged during the conflict, including 17 destroyed**, while confirmed funding can only cover light rehabilitation of 10 schools. **Without urgent action, at least 100,000 children risk being left without a classroom in September.**

MEHE has also presented its Emergency Summer Learning Recovery plan, aimed at continuing learning during the summer holiday and targeting Grades 1–6. Implemented over six teaching weeks as an integral complement to formal education, the programme enables pupils to make up for learning loss, supports them academically and psychosocially in a safe environment, strengthens their readiness for the 2026/27 academic year, and prepares them for the national diagnostic assessment in early September, directly linking summer catch-up to school readiness. Funding shortfalls prevent national coverage of all students with disrupted education.

Food Security and Agriculture

Since the escalation of hostilities on 2 March 2026, Food Security Sector partners have rapidly scaled up life-saving assistance for displaced populations across Lebanon. Emergency response efforts initially focused on supporting people in collective shelters, with partners delivering **more than 15.3 million hot and cold meals and distributing 152,153 ready-to-eat (RTE) kits** containing items that do not require preparation, ensuring immediate access to food for newly displaced households with limited cooking facilities.

To complement shelter-based food assistance, bread distributions have been expanded in coordination with the Ministry of Economy and Trade and the Union of Bakeries. Since April, partners have distributed 277,579 bread bundles through a network of 22 bakeries. Discussions are ongoing with the Union of Bakeries regarding a potential second phase of bread distributions, subject to the availability of additional funding.

Health

Health Sector partners provided 440,640 health consultations to internally displaced persons and **distributed 160,434 courses of medication through 197 primary health care centres (PHCCs)**. Partner updates indicate that collective shelter closures and population movements are contributing to declining occupancy in Beirut and Mount Lebanon shelters, necessitating that Primary Health Care Satellite Units (PSU) activities be reduced or adjusted in several locations as displaced families return to the south or relocate to host communities. Partners continue to support emergency and trauma care, primary health care services, the provision of essential medicines, disease surveillance, and mental health and psychosocial support services.

According to the World Health Organization (WHO) Surveillance System for Attacks on Healthcare (SSA), **221 attacks on health care workers, facilities, and transport have been reported since 2 March, resulting in 135 deaths and 406 injuries among health care professionals**. While no new attacks on healthcare were reported since the previous report, insecurity, return movements, and access constraints continue to disrupt service continuity and operational planning, particularly in parts of the South and Nabatieh governorates.

Overall, **health facilities remain under pressure due to staffing shortages, supply gaps, damaged or partially functional health facilities and operational constraints**, while vulnerable populations continue to face high out-of-pocket costs, limited access to essential medicines, specialized care, hospitalization, and fragmented referral pathways. Health partners continue to adapt service delivery to population movements, sustain support to hospitals and primary healthcare services, and strengthen border health screening and referral mechanisms. Sustained funding and strengthened protection of health care services remain critical to maintaining service continuity and preventing further deterioration in health outcomes. **Only 17 per cent of the Health Sector's funding requirements under the Lebanon Revised Flash Appeal have been met**, limiting the continuity of life-saving services and underscoring the urgent need for sustained operational and financial support.

Nutrition

Since 2 March, 49,868 children under five, adolescent girls, and Pregnant and Breastfeeding Women (PBW) have been reached with emergency nutrition rations and micronutrient supplements, amounting to 750,416 rations and supplements providing at least one month of coverage. This includes 1,050 children aged 6–12 months residing inside and outside collective shelters who received age-appropriate complementary feeding kits. 24,939 children under five and 5,044 PBW were screened for wasting, identifying 947 PBWs and 749 children for referral, enabling the early identification of individuals requiring further nutrition support and treatment. All designated facilities continue to deliver lifesaving inpatient care, with the exception of Mashghara Hospital (Bekaa), which is currently operating on an emergency-only basis.

The national Infant and Youth Child Feeding (IYCF) hotline continues to serve as a critical support channel. Between the 2 March and 6 July, 957 calls were received from caregivers, of which 741 were referred for IYCF support. Under MoPH-led Safe Provision of Breastmilk Substitutes (BMS) initiative, 456 infants under one year of age received infant formula support following individual assessments conducted by Nutrition Sector partners' IYCF specialists, followed by the distribution of 4,504 cans of infant formula.

To strengthen the standardization of support for non-breastfed infants, Nutrition Sector partners conducted a training for 29 frontline IYCF staff on the use of the newly procured Safer BMS Kits. 3,000 kits procured by UNICEF will be distributed through trained IYCF specialists under the MoPH-led Safe Provision of BMS initiative to support eligible non-breastfed infants in line with national guidance. Complementing these efforts, 19,777 caregivers of children under five participated in counselling and awareness sessions on IYCF, nutrition, and Early Childhood Development (ECD), delivered through both in-person and digital platforms.

Protection

As of 6 July, **333,246 internally displaced persons and other affected individuals** received protection services, **over 63 per cent of whom were women and girls**. Assistance included Prevention of Sexual Exploitation and Abuse (PSEA), Gender-Based Violence (GBV), and child protection awareness activities; psychosocial support for **111,819 individuals**; case management for **2,377 people**; protection cash assistance for approximately **11,848 vulnerable individuals**; dignity kits for more than **36,180 women and girls**; and specialized support for **2,236 persons with disabilities**.

Protection concerns remain significant, including UXO contamination, distress linked to repeated displacement, uncertainty among households unable to return, and severe financial hardship driving needs for rent, basic assistance, and livelihoods support. Reduced access to aid and employment, economic exploitation, rising costs, and protection risks faced by some displaced Syrians - including fear of arrest or deportation - continue to compound vulnerabilities. Ongoing shelter closures and consolidations are causing further relocations and distress, while frequent movement is disrupting service delivery, referrals, and continuity of care. Concerns also persist regarding shelter conditions, including inequitable assistance distribution, limited transparency, movement restrictions, and inadequate sanitation facilities. Some households unable to return reportedly face pressure to leave shelters without clear alternatives, increasing frustration and stress.

GBV risks continue to be heightened by pre-existing gender inequalities, economic hardship, unemployment, overcrowding, loss of housing and livelihoods, and prolonged displacement. Partners reported incidents of violence against women, increased pressure on women to generate income, and discriminatory pricing targeting some displaced Shiite women. Women also requested psychosocial support for husbands and children, while partners continued and expanded psychosocial support and awareness activities in and outside collective shelters.

Child protection concerns include child labour among vulnerable households adopting negative coping mechanisms, alongside the need for continued safeguarding, age-appropriate awareness on body safety and personal boundaries, and monitoring of children in collective shelters. Repeated shelter transitions are disrupting participation in structured activities and continuity of support. Partners continued to provide psychosocial support, recreational activities, awareness sessions, and individual follow-up for children affected by displacement and repeated relocations.

Shelter

Within collective shelters, **Shelter Sector partners have completed repairs at 411 sites to date**. Of these, **188 collective shelters remain operational, while 223 have since closed amid ongoing population movements**. Repair works that were ongoing in 31 additional sites have been placed on hold pending further monitoring of the situation, as collective shelters continue to close on an almost daily basis and priorities are regularly reassessed.

The Shelter Sector is **coordinating with sub-national Disaster Risk Reduction (DRR) authorities on the rehabilitation of newly identified collective shelters in South and Nabatieh governorates to accommodate returnees whose homes have been destroyed or who originate from areas that remain inaccessible or unsafe**. Several partners have expressed interest in supporting repair and preparation of these sites, subject to operational requirements and approvals.

Since 2 March, **all households in collective shelters have received initial Core Relief Items (CRIs)**, including 111,894 mattresses, 149,073 blankets, and 75,894 pillows, in addition to other essential NFIs.

Outside collective shelters, targeted assistance continues for vulnerable households, including those in hosted and rented arrangements. **Distributions have included 29,792 mattresses, 42,347 blankets, and 18,832 pillows. CRI support for returnees shall be provided based on assessed needs**: those in newly opened collective shelters in coordination with local authorities and site focal points; new arrivals in existing shelters where gaps are confirmed; and for returnees outside collective shelters through referrals and assessments, prioritizing households in unfurnished rentals lacking essential items.

Additionally, **3,342 vulnerable households received a one-off USD 250 cash-for-shelter grant** to cover urgent shelter costs, including minor repairs, rent, and utilities.

Site Management and Coordination (SMC)

In support of SMC partner fundraising efforts and to ensure alignment with the sub-sector guidance and response approaches, the SMC sub-sector coordination team conducted meetings with selected SMC partners for the 3rd LHF reserve allocation, to support prioritized site selection and the project development process.

MEHE provided updates on **Phase 1 of the site consolidation plan, which will target sites hosting less than 20 IDPs and private schools that were opened without authorization**. The initial focus is Beirut and Mount Lebanon governorates before expanding to other areas. MEHE aims to complete this phase before September to ensure schools are ready for the 2026/2027 academic year. The MEHE engineering unit is developing an SOP outlining the consolidation and site decommissioning process and is coordinating with governors on the list of sites to be used for consolidation.

An analysis of SMC site prioritization showed that **214 sites will require immediate SMC support, while 169 sites will receive support subject to the availability of additional funding**. Partners have been requested to coordinate with the SMC sub-sector for site allocation to ensure alignment with prioritization and avoid duplication or overlap.

SMC partner IOM facilitated two training sessions targeting 45 MoSA frontline staffs in Nabatiyeh and North in addition to one training facilitated by DRC targeted 32 MoSA participants from Mount Lebanon

Water, Sanitation and Hygiene

As of 06 July, the WASH Sector has reached **1,121,401 people across collective shelters, host communities, and out-of-shelter settings** through emergency water, sanitation, and hygiene services. Despite this progress, significant gaps remain. Assessment data from the Rapid Technical Assessment (Round 2) identified additional needs to meet minimum sector standards.

Since 2 March, WASH Sector partners have provided **991,000 litres of fuel to water establishments**, sustaining public water supply services for **an estimated 860,797 people**. WASH partners further **supported 324 water stations with fuel**, repairs, and spare parts critical to maintaining network functionality under increased demand.

Displaced people inside collective shelters have received a total of **132,253 hygiene kits, 89,316 menstrual hygiene kits, and 1,840 cleaning kits**. WASH partners have also provided **3,765,725 litres of potable water and 146,840 m³ of water to collective shelters through water trucking**, addressing immediate drinking water needs in sites with limited or disrupted water supply.

Logistics and Telecommunications (LTC)

While some organizations have reduced their reliance on coordinated transport services as commercial transport providers become more willing to reach certain destinations directly, the majority of humanitarian partners continue to rely on Logistics Cluster convoys to access some locations.

With WFP support, the Logistics Cluster continues to facilitate movement of relief supplies through coordinated transport services, including convoys to hard-to-reach areas in Lebanon and facilitation of the Jordan–Lebanon corridor:

- On 30 June, a convoy of 14 trucks delivered shelter, food, protection and WASH supplies to Tyre (South), while on 2 July, three trucks transported dignity kits and ready-to-eat meals to Hasbaya (Nabatieh). Since March 2026, **the Logistics Cluster has facilitated 33 convoys, supporting the delivery of multi-sector assistance to approximately 121,700 conflict-affected people**.
- The Jordan–Lebanon corridor remains a strategic regional access route, facilitating the movement of vital cargo through collaboration between Jordanian and Lebanese authorities and humanitarian community. Alongside supporting the delivery of joint inter-sectoral assistance, it enables maintaining an established regional supply route that can be leveraged to respond to evolving humanitarian needs.

To ensure its services remain responsive to operational needs and continue to facilitate humanitarian activities across Lebanon, the Logistics Cluster has launched bilateral consultations with 25 key partners and stakeholders to review current activities and identify priorities for future support.

GENERAL COORDINATION

Initial consolidated monitoring results under the revised Flash Appeal indicate that approximately **1.1 million people have received at least one form of humanitarian assistance** as of 30 June. Multi-purpose Cash Assistance reported the highest direct beneficiary reach, followed by Food Security, Health, Shelter and Site Management, and WASH. When indirect reach through the repair and maintenance of water facilities in the water establishments is also considered, WASH represents the sector with the highest overall reach. Partners continue to track reach and refine reporting as additional information becomes available to monitor the response.

The Humanitarian Country Team met on 2 July to discuss strategic priorities for the response, including follow-up to recent high-level engagements, next steps from the HCT Retreat, and the proposed Lebanon Response Plan (LRP) 2026 Addendum. Members also exchanged with the South Operational Coordination Group (OCG) on the evolving operational situation and support needs in southern Lebanon, and received updates on key protection trends, including the situation of Palestine refugees and displacement dynamics.

The Inter-Sector Coordination Group met on 3 July to review the latest response monitoring results, discuss the proposed LRP 2026 Addendum and planning timeline, and review draft guidance on targeting assistance for displaced populations residing outside collective shelters. Members also received operational updates from the Operational Coordination Groups, confirmed the rotation of OCG co-chairs, and discussed cross-sector operational priorities and coordination issues.

Planning has commenced for an Addendum to the Lebanon Response Plan 2026 that will cover the period from September to December 2026. The Addendum will complement, rather than revise, the existing 2026 LRP by capturing additional humanitarian and immediate stabilization needs arising from the current escalation and not covered by the original plan. Sector consultations and technical planning will take place throughout July and August, with publication envisaged by early September.

ISCG Co-Chairs, in consultation with the Ministry of Social Affairs (MoSA), finalized a **draft guidance note to support a consistent, needs-based approach to targeting assistance for displaced populations residing outside collective shelters**. The guidance aims to help partners prioritize limited resources while remaining aligned with the Government's position that in-kind assistance should, to the extent possible, be prioritized within collective shelters, with cash remaining the preferred modality outside collective shelters. The draft has been shared with Sector Coordination Teams and Operational Coordination Groups for review before submission to MoSA for final technical consultation.

Lebanon secured an additional US\$35.5 million in humanitarian funding to support implementation of the revised Flash Appeal, including US\$12 million from the Central Emergency Response Fund (CERF) and US\$23.5 million through the Lebanon Humanitarian Fund's Reserve Allocation (3rd in 2026). CERF funding will support Multi-Purpose Cash Assistance, Health and Nutrition, and Protection. The LHF allocation will support Food Security, Shelter and Site Management, WASH, Health and Nutrition, Protection, and Emergency Livelihoods interventions through national NGOs.

Access and Civil-Military Coordination

Despite the announcement of a renewed ceasefire, and the formal signing of the Trilateral Framework Agreement between Israel, Lebanon, and the United States, humanitarian operations in Lebanon continue to be conducted in a highly volatile and unpredictable environment. Humanitarian partners rely on the Humanitarian Notification System (HNS) to facilitate access and movements to areas south of the Litani River (SLR) and parts of the north of the Litani River (NLR). Ongoing hostilities, evolving security dynamics, and fluctuating access conditions continue to undermine operational predictability and pose challenges to the safe, timely, and sustained delivery of humanitarian assistance.

Through the support of the HNS, humanitarian partners have maintained access to conflict-affected and hard-to-reach areas across southern Lebanon and other impacted regions. **Between 2 March and 06 July, a total of 365 humanitarian movements were supported through the HNS, including 328 missions to locations south of the Litani River¹.** These missions were facilitated through established notification arrangements and coordinated with the United Nations Interim Force in Lebanon (UNIFIL), in line with prevailing operational modalities.

While the majority of missions were successfully completed, several encountered operational constraints, including delays, postponements, restricted operating windows, route limitations, communications disruptions, GPS spoofing, contamination from unexploded ordnance (UXO), and cancellations resulting from rapidly changing security conditions. Some missions were also conducted in proximity to hostilities or ongoing military activity, further complicating implementation and increasing operational risks.

Despite these challenges, humanitarian movements enabled the delivery of critical, life-saving assistance, including bread, fresh produce, flour, safe drinking water, fuel, medical supplies, and core relief items. Where feasible and upon request, humanitarian partners also supported the relocation of vulnerable individuals from high-risk areas to safer locations.

For further information, please contact:

Kristen Knutson, OCHA Head of Office, knutson@un.org

¹ **Main locations reached included** Qlaiaa, El Nabatieh, Baalbek, Qaa, the southern suburbs of Beirut, Marjaayoun, Jdeidat Marjaayoun, Hasbaya, Chebaa, Ain Ebel, Tyre (including Palestinian camps), Rmeish, Ebel El Saqi, Fardiss, Bourj El Moulouk, Tebnine, Kaoukba, Souk El-Khan, and Naqoura.
